Grand Canyon Explorers, Part 1

1. First, we'll start in **Pomona**. What landforms can you identify?

2. Next, we'll fly to the **Grand Canyon**. What river runs through the Grand Canyon?

Clue 1: A scientist visited the Grand Canyon this past year with his family. As they learned about Grand Canyon, he found out that the Canyon was about 2 centimeters deeper now than it was when he visited the canyon with his parents fifty years ago. It is getting deeper each year.

3. Do you think the Grand Canyon could be changing? Why or why not?

Clue 2: Swift, powerful water from the Colorado River cuts through the canyon carrying any loose soil and rocks with it.

4. Could water from the Colorado River be changing the Grand Canyon? How?
