Landform Challenge, Part 1

1. Think about these two science ideas:
 - Landforms change over time.
 - Water is one thing that causes landforms to change.
2. Look at the photo below and think about what is causing the cliffs along the coast to look the way they do.

3. Do you think the cliffs are changing or staying the same? Why or why not?

4. If changes are happening, what do you think is causing them?
