What is a Logistics Quality Engineer?

INSTEAD OF BUILDING THE CARS FOR YOU... WE BUILD THE PROCESSES TO GET THEM TO YOU!

- Less touch-points = Hands- off!!
- Weather/ Environment = Take cover!!
- High Security = No bad-guys allowed!
- Safe Travel-paths = Smooth Sailing ☺

```

```

On October 14th, OMS featured guest speaker Heather Rourke, logistics quality engineer at Mazda, to speak about career opportunities available. Mazda Motor Corporation, founded in 1920, is unique in that they customize their vehicles to the customers. Their innovation and vehicle design makes it fuel-efficient and safe. Heather, a former CPP alumni, spoke of her experience as a Quality engineer. To ensure the vehicle is safely delivered, Heather makes safe travel paths, less touch points, accounts for weather and the environment, and makes sure high security is available. On top of that, she works with R&D and scheduling. Apart from working hard at school and persevering, Heather emphasizes Tableau and Excel as the main technical skills required.
