Exploring the Factors that Affect the Choice of Destination for Medical Tourism from Students' Perspective Harsimran Gill, Business Administration

Dr. Neha Singh Kellogg Honors College Capstone 2011

What is Medical Tourism?

Medical tourism is the act of travelling abroad [across international borders] to obtain various types of health and wellness treatments. (Reddy, York, & Brannon, 2010)

Pros & Cons of Medical Tourism

- Pros
- Affordable
- Quality health care
- No waiting lines
- Opportunity to vacation
- Cons
- Lack of knowledge and apprehension
- Insurance doesn't cover all costs

Research Objective

The purpose of my study was to explore the factors that affect decision-making in medical tourism.

Yes

88%

Privacy & Anonymity

- Fewer restrictions for
 - certain types of procedures •
- Weak malpractice laws in developing countries
 Difficulty of obtaining follow-up

care

Methodology

- A total of 14 questions were designed:
- Questions 1-5 focused on respondent's profile
- Questions 6-14 explored their choices and attitudes towards medical tourism
- A total of 194 students were recruited from various disciplines and they volunteered to take the survey.
- The participants answered 3 page questionnaire by sharing their opinions and beliefs on medical tourism.
- The results were analyzed using descriptive statistics.

- Perceptions are being explored for potential tourists in this study and not for actual.
- This study is exploratory at this stage.

- There are factors that they consider important before making their decisions.
- This research can help destinations with their medical tourism strategies.

Future Directions

- Explore perceptions of actual medical tourists.
- Comparison between the two groups.
- Research the changes in perceptions through the transitional process of travel:
