

RESPeCT Summer Institute Professional Development Leader Guide (PDLG)

Grade Level	3	Day	6	STeLLA Strategy	SCSL Strategies B, C, and I STL Strategy 7	Subject Matter Focus	Forces
Focus Questions	<ul style="list-style-type: none"> • How can we begin and end a lesson to help students develop a coherent science content storyline? • How can selecting appropriate science activities help students develop a coherent science content storyline? • Why do moving objects slow down and eventually stop? • What force makes a moving object slow down and eventually stop? 						
Main Learning Goals	<p>Participants will understand the following:</p> <ul style="list-style-type: none"> • STeLLA strategies B, I, and 7 are like bookends that mark the beginning and end of a lesson. The science ideas in the summary should match the focus question from the beginning of the lesson, and both the focus question and the summary should match the lesson’s main learning goal. • Activities should be selected because they will help students engage in making sense of the main learning goal, not because they’re fun, easy to do, or only topically related. Therefore, activities must be closely matched to the main learning goal. • Friction is a motion-resistant force created when the surfaces of two objects roll or slide across each other. • Friction depends on the surface composition of two objects that are sliding or rolling across each other. • Friction depends on the normal force exerted between two objects sliding or rolling across each other. • Friction slows down an object in motion. 						
Preparation		Materials			Videos		
<p>Daily Setup Tasks</p> <ul style="list-style-type: none"> • Check that video clips are correctly linked to PowerPoint (PPT) slides. • Set up PowerPoint. • Make sure video clips play correctly with good sound. • Arrange furniture and food. • Arrange participant materials. • Put up posters and charts. <p>Planning and Preparation Tasks</p> <ul style="list-style-type: none"> • Study the PDLG, PowerPoint slides (PPTs), video clips, and handouts. Make changes to PPTs if needed. • Review the reflections from day 5 and create a summary slide. • Watch video clips and anticipate participant 		<p>Posters and Charts</p> <ul style="list-style-type: none"> • STeLLA Framework and Strategies poster • Day-6 Agenda (chart) • Day-6 Focus Questions (chart) • Norms for Working Together (chart) • Strategy charts from days 1–5 (STL strategies 1–6 and SCSL strategy A) • Parking Lot poster <p>Handouts in RESPeCT PD Binder Front Pocket</p> <ul style="list-style-type: none"> • Participants’ SCSL and STL Z-fold summary charts <p>Handouts in RESPeCT PD Binder, Day 6</p> <ul style="list-style-type: none"> • 6.1 Analysis Guides B and I: Setting the Purpose and Summarizing Key Science Ideas 			<p>Video clips from one Forces lesson:</p> <ul style="list-style-type: none"> • Video Clip 6.1: Torres classroom (strategy B, beginning of lesson); 6.1_mspcp_gr.3.forces_torres_L1_c1–2 • Video Clip 6.2: Torres classroom (strategy I, end of lesson); 6.2_mspcp_gr.3.forces_torres_L1_c5 <p>Video clips from another Forces lesson:</p> <ul style="list-style-type: none"> • Video Clip 6.3: Torres classroom (strategy C); 6.3_mspcp_gr.3.forces_torres_L3_c1 • Video Clip 6.4: Torres classroom (strategy C); 6.4_mspcp_gr.3.forces_torres_L3_c2 • Video Clip 6.5: Torres classroom (strategy C); 6.5_mspcp_gr.3.forces_torres_L3_c3 		

<p>responses.</p> <ul style="list-style-type: none"> • Prepare charts for the day's agenda and focus questions. • Review the activities for Forces lessons 3a/b, and 4a/b in the lesson plans binder. • For content deepening: <ul style="list-style-type: none"> • Assemble the materials for the ramp investigation (see Supplies section). Glue a strip of sandpaper to the underside of the strip of tile for each team. (The setup should look like the model on PowerPoint slide 20.) • On chart paper, create a class data table (chart) for teams to record the middle distance the car traveled over the carpet, tile, and sandpaper. (Use the table on PowerPoint slide 22 as a model.) • Follow the instructions in Forces lesson 4a (overview page) for assembling the hand-strip model using handout 6.9 (Hand Strip). 	<ul style="list-style-type: none"> • 6.2 Transcript for Video Clip 6.1 • 6.3 Transcript for Video Clip 6.2 • 6.4 Analysis Guide C: Selecting Activities Matched to the Learning Goal • 6.5 Transcript for Video Clip 6.3 • 6.6 Transcript for Video Clip 6.4 • 6.7 Transcript for Video Clip 6.5 • 6.8 Does the Surface Matter? Trends in Reflections (7 min)</p> <p>a. Give participants time to review your feedback on their reflections from day 5 and offer reactions, comments, or follow-up questions.</p>
Lesson Analysis	Science Content Learning																		

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Review: Science Content Storyline</p> <p>In your notebooks, jot down ...</p> <ul style="list-style-type: none"> 3 things you remember from yesterday's session, 2 ideas that seem important to you, and 1 question you have. <p>Be prepared to share one idea and question with the group.</p>	<p>Display Slide 4. Review: Science Content Storyline (10 min)</p> <ul style="list-style-type: none"> a. Point out the three tasks on the slide. Allow 4–5 minutes for participants to write their responses in their science notebooks. b. Have each participant share one idea about the science content storyline that she or he thinks is really important. c. Then ask participants to share their questions. If you can answer them quickly, go ahead and do so. If a question needs a more detailed response, write it down and schedule a time to address it.
		<p>Today's Focus Questions</p> <ul style="list-style-type: none"> • How can we begin and end a lesson to help students develop a coherent science content storyline? • How can selecting appropriate science activities help students develop a coherent science content storyline? • Why do moving objects slow down and eventually stop? • What force makes a moving object slow down and eventually stop? 	<p>Display Slide 5. Today's Focus Questions (2 min)</p> <ul style="list-style-type: none"> a. Introduce today's focus questions.

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>Display Slide 6. STeLLA Conceptual Framework (1 min)</p> <p>a. “Today we’ll be looking at four new STeLLA strategies. Three of them are Science Content Storyline Lens strategies, and one is a Student Thinking Lens strategy. Throughout the session, think about how these strategies are different from one another and how they are closely linked to each other.”</p>
<p>8:30–10:10 100 min (Includes 10-min break)</p> <p>Lesson Analysis: STeLLA Strategies B, I, and 7</p> <p>Slides 7–14</p>	<p>Purpose</p> <ul style="list-style-type: none"> Use lesson analysis of classroom videos to better understand STeLLA strategies B, I, and 7. Deepen participants’ science-content knowledge of forces through lesson analysis. <p>Content</p> <ul style="list-style-type: none"> Strategies B, I, and 7 are like bookends that mark the beginning and end of a lesson. The science ideas used in the summary should match the focus question from the beginning of the lesson, and both the focus question and the summary should match the lesson’s main learning goal. The Forces science content emerges from video-based lesson analysis. <p>What Participants Do</p>	<p>Lesson Analysis: Focus Question 1</p> <p>How can we begin and end a lesson to help students develop a coherent science content storyline?</p> <hr/> <p>Strategies B, I, and 7: Purposes and Key Features</p> <p>Group 1: What are the purpose and key features of strategy B? <ul style="list-style-type: none"> Why is a focus question or goal statement important for science content storyline coherence? </p> <p>Group 2: What are the purpose and key features of strategy I? <ul style="list-style-type: none"> Why is summarizing key science ideas important for science content storyline coherence? </p> <p>Group 3: What are the purpose and key features of strategy 7? <ul style="list-style-type: none"> How does strategy 7 compare with strategy I? </p> <p>All groups: Make sure to cite ideas from the STeLLA strategies booklet in your answers.</p>	<p>Display Slide 7. Lesson Analysis: Focus Question 1 (Less than 1 min)</p> <p>a. “Now let’s dig into our first focus question.”</p> <hr/> <p>Display Slide 8. Strategies B, I, and 7: Purposes and Key Features (25 min)</p> <p>a. Pairs (3 min): Direct participants to retrieve their Z-fold summary charts and share with a partner what they learned from their homework assignment about STeLLA strategies B, I, and 7.</p> <p>b. Small groups (12 min): Divide participants into three small groups and have them make charts that capture the purposes and key</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
	<ul style="list-style-type: none"> • Make, share, and discuss charts summarizing the purposes and key features of strategies B, I, and 7. • Discuss questions about strategies B, I, and 7. • Analyze video clips from the beginning and end of a Forces lesson. • Study the main learning goal (MLG), focus question, and summary in a Forces lesson plan. <p>Videos</p> <ul style="list-style-type: none"> • Video Clip 6.1, Torres classroom (beginning of lesson) • Video Clip 6.2, Torres classroom (end of lesson) <p>Handouts in PD Binder</p> <ul style="list-style-type: none"> • 6.1 Analysis Guides B and I • 6.2 Transcript for Video Clip 6.1 • 6.3 Transcript for Video Clip 6.2 <p>Supplies</p> <ul style="list-style-type: none"> • Science notebooks • Chart paper and markers <p>PD Resources</p> <ul style="list-style-type: none"> • STeLLA strategies booklet • RESPeCT lesson plans binder • Participants' SCSL and STL Z-fold summary charts (front pocket of PD binder) 		<p>features of the three strategies.</p> <p>Note: Challenge participants to imagine themselves in a Teacher Leader role. Ask them, “How would you explain these strategies to the teachers you’re leading?”</p> <p>c. Whole group (10 min): Have small groups share their charts in a whole-group share-out.</p> <p>Key ideas:</p> <ul style="list-style-type: none"> • Make sure participants understand that a focus question is designed to do more than just get students interested in the lesson. It gets them thinking about a phenomenon or something else they’ve never thought about before. It also reveals important things about the knowledge and experiences they’re bringing to the lesson, it conceptually situates the learning, and it’s referred to throughout the lesson. • STeLLA strategies B, I, and 7 are like bookends that mark the beginning and end of a lesson. The science ideas used in the summary should match the focus question from the beginning of the lesson, and both the focus question and the summary should match the lesson’s main learning goal.

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Discussion Questions: Strategy B</p> <ol style="list-style-type: none"> 1. What is the difference between focus questions and goal statements? 2. Which do you think would be more useful in engaging student interest and making their thinking visible—focus questions or goal statements? 	<p>Display Slide 9. Discussion Questions: Strategy B (7 min)</p> <p>a. Whole group: Discuss the questions on the slide as a group.</p> <p>Key ideas:</p> <ul style="list-style-type: none"> • A focus question is designed to be answered using the lesson’s main learning goal and supporting science ideas. A goal statement describes the main science idea to be learned. • Focus questions are always used in RESPeCT lesson plans because they’re useful in engaging student interest, making their thinking visible, and eliciting initial ideas at the beginning of a lesson. When posed at the end of a lesson, focus questions challenge students to use new ideas developed during the lesson.
		<p>Discussion Questions: Strategies I and 7</p> <ol style="list-style-type: none"> 1. What are various ways a lesson or unit can be synthesized and/or summarized? 2. How are strategies I and 7 similar and different? <ol style="list-style-type: none"> a. SCSL strategy I: Summarize key science ideas. b. STL strategy 7: Engage students in making connections by synthesizing and summarizing key science ideas. 	<p>Display Slide 10. Discussion Questions: Strategies I and 7 (7 min)</p> <p>a. Whole group: Discuss the first question on the slide. Participants can refer to the information on strategy 7 in the STeLLA strategies booklet to identify a variety of ways in which key science ideas in a lesson can be synthesized.</p> <p>b. Emphasize: “Toward the end of a unit, an entire lesson may be devoted to strategy 7, which engages students in synthesizing and summarizing science ideas across several lessons.”</p> <p>c. Discuss the second question on the slide.</p> <p>Key ideas:</p> <ul style="list-style-type: none"> • In strategy I, the <i>teacher</i> creates a summary of

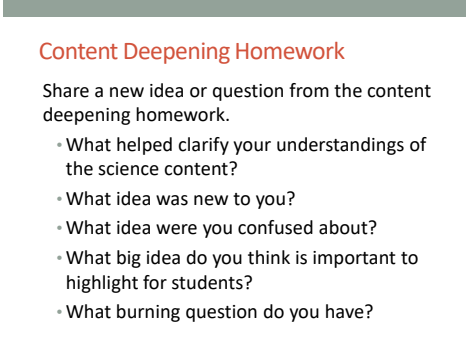

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>key science ideas in the lesson. Strategy 7, however, engages <i>students</i> in synthesizing and summarizing key science ideas in the lesson. When <i>students themselves</i> perform this work, it makes their thinking visible, engages them in active sensemaking, and reveals to the teacher any misunderstandings or gaps in knowledge. Using both strategies brings coherence to a science lesson and is a powerful way to end it.</p> <ul style="list-style-type: none"> • In strategy 7, summarizing involves making connections between key science ideas, which helps students <i>synthesize</i> the main learning goal or big idea in a lesson. • Summaries should focus on key science ideas, not activities; that is, focusing on “what we <i>learned</i>” versus “what we <i>did</i>.” • For a variety of reasons, a lesson sometimes ends before the main learning goal has been fully developed. However, summarizing work should still take place. For example, the teacher might say, “Our focus question today was <i>How do plants get their food?</i> What have we found out so far?” After students respond, the teacher could reply, “Yes, so far we’ve discovered that water and soil aren’t food for plants. But we still haven’t figured out what <i>is</i> food for plants. We’ll continue working on this question next time.”

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Video-based Lesson Analysis</p> <p>Next we'll analyze two video clips from the beginning and end of a lesson on forces.</p>	<p>Display Slide 11. Video-based Lesson Analysis (Less than 1 min)</p> <p>a. Transition: This slide marks the transition to video-based lesson analysis.</p>
		<p>Lesson Analysis: Strategy B</p> <ol style="list-style-type: none"> In Analysis Guides B and I (handout 6.1), review the four criteria for strategy B: Setting the purpose. Read the lesson context at the top of the video transcript (handout 6.2). Watch the first video clip, keeping in mind the criteria for strategy B. Analyze the transcript using the analysis guide. <ul style="list-style-type: none"> <i>How well does the beginning of this lesson match the criteria for strategy B?</i> Share and compare your analyses. <p>Link to video clip 1: 6.1_mscpp_gr3.forces_torres_l1_c1-2</p>	<p>Display Slide 12. Lesson Analysis: Strategy B (20 min)</p> <ol style="list-style-type: none"> Have participants locate Analysis Guides B and I (handout 6.1 in PD program binder) and spend 1 or 2 minutes reading the criteria for strategy B: Setting the purpose. Ask: “Do you have any questions about these criteria?” Emphasize: “Keep the criteria for strategy B in mind as you watch the first video clip from the beginning of a lesson on forces.” Individuals: Give participants a couple of minutes to read and think about the lesson context at the top of the video transcript (handout 6.2). Show the video clip. Whole group: “How well does the beginning of

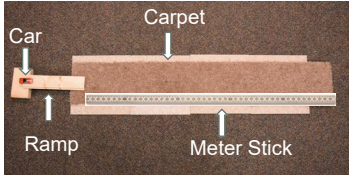

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p data-bbox="856 732 1115 760">Lesson Analysis: Strategy I</p> <ol data-bbox="856 769 1283 1003" style="list-style-type: none"> In Analysis Guides B and I (handout 6.1), review the six criteria for strategy I: Summarizing key science ideas. Review the lesson context at the top of the video transcript (handout 6.3). Watch the second video clip, keeping in mind the criteria for strategy I. Analyze the transcript using the analysis guide. <ul data-bbox="884 935 1241 979" style="list-style-type: none"> How well does the end of this lesson match the criteria for strategy I? Share and compare your analyses. <p data-bbox="972 1011 1268 1027">Link to video clip 2: 6.2_mscpp_gr.3.forces_torres_L1_c5</p>	<p data-bbox="1348 245 1881 272">this lesson match the criteria for strategy B?”</p> <p data-bbox="1320 289 1913 349">Note: During the discussion, be on the lookout for opportunities to clarify science-content ideas.</p> <p data-bbox="1320 365 1885 425">Ideal responses for questions from Analysis Guide B:</p> <ol data-bbox="1320 430 1913 669" style="list-style-type: none"> Implied main learning goal: Forces (pushes, pulls) cause things to move. Uses everyday language: Yes, the focus question uses everyday language (“What might cause something to move?”). Scientifically accurate: The focus question is presented in a scientifically accurate way. Goal statement: Not applicable. <p data-bbox="1320 704 1877 764">Display Slide 13. Lesson Analysis: Strategy I (20 min)</p> <ol data-bbox="1320 813 1913 1377" style="list-style-type: none"> Allow participants 1 or 2 minutes to read the six criteria in the analysis guide for strategy I: Summarizing key science ideas. Ask: “Do you have any questions about these criteria?” Emphasize: “Keep the criteria for strategy I in mind as you watch the next video clip from the end of the same Forces lesson.” Individuals: Give participants a couple of minutes to review the lesson context at the top of the video transcript (handout 6.3). Show the second video clip. Whole group: “How well does the end of this lesson match the criteria for strategy I? How well does the summary statement match the beginning of the lesson?”

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>Note: During the discussion, be on the lookout for opportunities to clarify science-content ideas.</p> <p>Ideal responses for questions from Analysis Guide I:</p> <ol style="list-style-type: none"> 1. Summary statement/activity: Yes, the teacher engages students in summarizing key ideas from the activity (video segment 00:03–02:18). Then students write what they learned about the focus question, which is another summarizing activity. 2. Conceptual understanding: Yes, the summary discussion focuses on using the conceptual idea of forces to explain how things move. 3. Matched to the MLG and FQ: Yes, the summary is matched to the focus question. In fact, in the final summary activity, students write an answer to the focus question. 4. Scientifically accurate: The summary discussion is scientifically accurate; however, from segments 00:35–00:37, the teacher pushed (or led) the student to be more accurate by saying that a pushing force, not a hand, caused the block to move. 5. Sensemaking: Yes, students are engaged in making sense of the summary both during the discussion and in the writing/drawing task. 6. Improvements: After affirming students' use of the words <i>push</i> and <i>force</i> (segments 00:37–01:13), the teacher could have included examples of pulling forces. 7. A missed opportunity: When a student refers to gravity (segment 02:09), the teacher could have asked students whether gravity is a push or a pull. That would link this unexpected response to the day's learning goal, since gravity isn't a focus in this lesson.

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p style="background-color: #d9ead3; padding: 2px;">The Forces Lesson Plans: Reading and Analysis</p> <ol style="list-style-type: none"> 1. Examine the main learning goal, the lesson focus question, and the lesson summary for your assigned Forces lesson plan (parts A and B). 2. Answer these questions in your notebooks, keeping in mind the analysis-guide criteria for strategies B and I: <ul style="list-style-type: none"> • What do you notice? • What do you wonder about? 	<p>Display Slide 14. The Forces Lesson Plans: Reading and Analysis (10 min)</p> <p>Note: This slide can be abridged or skipped if time is running short.</p> <ol style="list-style-type: none"> a. Read the instructions on the slide and assign a two-part lesson plan (parts A and B) to each participant. b. Ask participants if they have any questions about the assignment. c. Individual reading-and-analysis time (5 min): “Answer the slide questions in your notebooks, keeping in mind the analysis-guide criteria.” d. Whole-group discussion (5 min): Briefly discuss participants’ observations and questions for their assigned lesson plans. <p>Note: Participants should see a close match between the main learning goal, the lesson focus question, and the summary. However, also welcome critiques and suggestions for improvement. Just make sure critiques are based on good understandings of the strategies involved.</p>
10:00–10:10 10 min	BREAK		

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
10:10–12:00 110 min Content Deepening: Forces Slides 15–50	<p>Purpose</p> <ul style="list-style-type: none"> • Deepen participants’ science-content knowledge of forces by conducting investigations from Forces lessons 3a/b and 4a/b. • Expand participants’ science-content knowledge of frictional forces. <p>Content</p> <ul style="list-style-type: none"> • Friction is a motion-resistant force created when the surfaces of two objects roll or slide across each other. • Friction depends on the surface composition of two objects that are sliding or rolling across each other. • Friction depends on the normal force exerted between two objects sliding or rolling across each other. • Friction slows down an object in motion. <p>What Participants Do</p> <ul style="list-style-type: none"> • Investigate whether differences in surface textures affect the distance a toy car travels before it stops. • Compare the hand-strip model with the carpet, tile, and 		<p>Display Slide 15. 		<p>Investigation 2: The Hand-Strip Model</p> <ul style="list-style-type: none"> • Can we agree that the carpet is most like the hand strip? • What would you say is the main difference between the carpet and the tile when you compare it with the hand strip? • Why do you think the car travels the shortest distance over both the carpet and the hand strip? What does this have to do with our science idea of force? 	<p>Display Slide 35. Investigation 2: The Hand-Strip Model (3 min)</p> <p>a. Discuss the questions on the slide.</p>												

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p> Key Science Idea</p> <p>Friction is a force that's created when bumps on the surfaces of two objects push against one another. Friction is what causes moving objects to slow down and eventually stop.</p>	<p>Display Slide 36. Key Science Idea (Less than 1 min)</p> <p>a. Introduce the key science idea on the slide and ask participants to copy it into their science notebooks.</p>
		<p>Investigation 3: What Is Friction?</p> <ul style="list-style-type: none"> • Locate Forces handout 4.2 (Friction) in your lesson plans binder. • Think about these questions as you read the essay: <ol style="list-style-type: none"> 1. What causes friction? 2. Why does friction exert a different amount of force on different surfaces? 3. What would happen if there were no friction acting on an object? (Hint: What would happen in outer space?) 	<p>Display Slide 37. Investigation 3: What Is Friction? (2 min)</p> <p>a. Have participants locate Forces handout 4.2 (Friction) in their lesson plans binders.</p> <p>b. "As you read this essay about friction from Forces lesson 4b, think about the questions on the slide."</p>
		<p>Investigation 3: What Is Friction?</p> <ul style="list-style-type: none"> • Reread the fourth and fifth paragraphs of the essay. • How do these paragraphs relate to what you observed when you used a hand lens to examine the wheels of the toy car and the three surfaces (carpet, tile, and sandpaper)? • What happens when tiny bumps on the surface of one object push against tiny bumps on the surface of another object? Why do the bumps matter? 	<p>Display Slide 38. Investigation 3: What Is Friction? (4 min)</p> <p>a. Reread the fourth and fifth paragraphs of the essay as a group (starting with "When you let go of the toy car" and ending with "That pushing force is the friction that makes a moving object slow down and eventually stop").</p> <p>b. Discuss the questions on the slide.</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Reflect: Content Deepening Focus Question 2</p> <p><i>What force makes a moving object slow down and eventually stop?</i></p> <p>Write your best answer to this question in your science notebook. Describe friction in your own words using the key science ideas and terms you've learned about so far.</p>	<p>Display Slide 39. Reflect: Content Deepening Focus Question 2 (3 min)</p> <p>a. Review the focus question on the slide.</p> <p>b. Ask participants to write their best answer to the question in their notebooks, describing friction in their own words using the key science ideas and terms they've learned about so far.</p>
		<p> Key Science Ideas</p> <ul style="list-style-type: none"> • Friction is a force that's created when bumps on the surfaces of two objects push against one another. Friction is what causes moving objects to slow down and eventually stop. • Rougher, bumpier surfaces create more friction, causing objects to slow down and stop more quickly. • Smoother surfaces create less friction, causing objects to travel farther before they stop. 	<p>Display Slide 40. Key Science Ideas (Less than 1 min)</p> <p>a. Highlight the key science ideas on the slide.</p> <p>b. Ask: "Does everyone agree with these ideas? Would you like to add or revise anything?"</p>
		<p>Review: Forces and Motion</p> <ul style="list-style-type: none"> • What causes a change in an object's motion? • What is net force? • How do scientists represent a force acting on an object? 	<p>Display Slide 41. Review: Forces and Motion (3 min)</p> <p>a. "Before we explore friction in more detail, let's review some key science ideas from our previous content deepening session."</p> <p>b. Briefly discuss the questions on the slide.</p> <p>Answers:</p> <ul style="list-style-type: none"> • Question 1: An object's motion changes when a force is exerted on the object. <i>Forces</i> are pushes or pulls that occur in an interaction

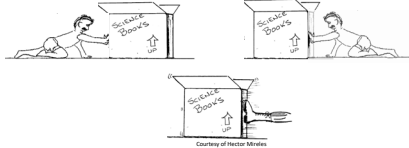

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>between two objects. These pushes or pulls make an object start moving, change speed or direction, or stop moving. In most cases, physical contact is required between two objects for a force to be exerted. <i>Gravity</i> is one kind of force that can be exerted without physical contact between two objects.</p> <ul style="list-style-type: none"> • Question 2: <i>Net force</i> is the sum of all of the forces acting on an object. Forces acting on an object in the same direction increase the net force. Forces acting on an object in opposite directions can result in a net force of zero. If the net force is zero, there is no change in motion. An object's speed increases when the net force is in the direction of an object's motion and decreases when the net force is in the opposite direction of motion. • Question 3: Scientists use arrows or vectors to represent the forces acting on an object. The direction of an arrow indicates the direction of the force, and the length of the arrow represents the strength of the force. The longer the arrow, the stronger the force exerted on an object.
		<p>Questions to Think About</p> <ul style="list-style-type: none"> • What is the direction of a frictional force on an object that is sliding or rolling across a surface? • What is the direction of a frictional force on an object at rest that is "trying" to start sliding across a surface? • Why are massive objects harder to slide across the floor than light-weight objects? 	<p>Display Slide 42. Questions to Think About (Less than 1 min)</p> <ol style="list-style-type: none"> a. Read the questions on the slide. b. "These questions will guide our content deepening work for the rest of the session."

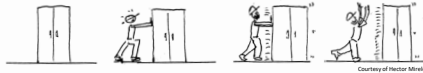

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p data-bbox="863 380 1192 407">Friction: Tall Grass versus Asphalt</p> <p data-bbox="863 415 1255 505">Scenario: Two toy cars coasting at the same speed encounter two different surfaces: tall grass and asphalt. Why does the car driving through tall grass slow down faster than the car traveling over asphalt?</p>  <p data-bbox="1094 516 1157 532">Tall Grass</p> <p data-bbox="1094 602 1146 618">Asphalt</p> <p data-bbox="1199 672 1276 683"><small>Courtesy of Hector Minerva</small></p>	<p data-bbox="1325 354 1871 415">Display Slide 43. Friction: Tall Grass versus Asphalt (3 min)</p> <p data-bbox="1325 464 1881 526">Note: This scenario is similar to the soccer-ball scenario in Forces lesson 3a.</p> <ol data-bbox="1325 553 1913 919" style="list-style-type: none"> Describe the scenario on the slide. Emphasize that both cars are initially coasting at the same speed. When they encounter different surfaces, they begin slowing down at different rates. The car driving on the asphalt travels farther before stopping than the car driving through tall grass. Ask, “Why does the car driving through tall grass slow down faster than the car traveling over asphalt?” Invite participants to share their explanations and reasoning. <p data-bbox="1325 935 1461 964">Key ideas:</p> <ul data-bbox="1325 976 1913 1179" style="list-style-type: none"> Friction opposes the motion of one object rolling or sliding across another object. The car driving through the tall grass slows down more quickly than the car traveling over asphalt because the grass surface is rougher than the asphalt and creates greater friction against the car tires.

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Types of Friction</p> <ul style="list-style-type: none"> • Rolling friction: A force that resists or opposes motion when an object rolls over a surface. • Sliding (dynamic) friction: A force that resists or opposes motion when an object slides across a surface. • Static friction: A force that opposes the initial push on an object to get it moving. The force of friction equals the force of the push, so the object doesn't move. • Fluid friction (draft force): The force that resists the movement of an object through water or air. 	<p>Display Slide 44. Types of Friction (3 min)</p> <ol style="list-style-type: none"> “So from the essay we read earlier, we know that friction causes all moving objects on Earth to slow down and eventually stop. But are all frictional forces the same?” “The content background document mentions four key types of friction: rolling friction, sliding friction, static friction, and fluid friction. We'll focus on the first three.” Walk participants through the definitions of each type of friction on the slide. Emphasize: “Static friction acts in the opposite direction of the intended motion of an object. Since the force of friction equals the force of the push, the object doesn't move. All other types of friction act in the opposite direction of the motion of an already-moving object.” “First, we'll investigate rolling friction.”
		<p>Rolling Friction</p> <p>Scenario: Two identical soccer balls are rolling over different surfaces. One ball is rolling over a concrete surface, and the other ball is rolling over a grassy surface.</p> <p>Draw all of the forces acting on the soccer balls.</p> 	<p>Display Slide 45. Rolling Friction (8 min)</p> <ol style="list-style-type: none"> Distribute handout 6.10 (Friction and Rolling Soccer Balls) and introduce the scenario. Individuals: Ask participants to draw the forces acting on each of the soccer balls and answer the questions on the handout. Whole group: Discuss participants' diagrams and responses to the handout questions. <p>Note:</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<ul style="list-style-type: none"> Participants should draw a downward-pointing arrow representing weight (the downward pull of gravity) and an upward-pointing arrow representing normal force. Other arrows should represent the direction the balls are rolling across each surface, as well as the opposing force of friction.
		<hr/> <p>Rolling Friction</p> <p><i>A force that resists or opposes an object's motion when it rolls over a surface.</i></p> <p>Where might you encounter rolling friction in everyday life?</p> <p>Examples:</p> <ul style="list-style-type: none"> Coasting in your car after it runs out of gas Pushing a shopping cart down a grocery aisle 	<p>Display Slide 46. Rolling Friction (2 min)</p> <ol style="list-style-type: none"> Review the definition of rolling friction on the slide. Ask participants to share examples of rolling friction in their everyday lives. Record their ideas on chart paper.
		<hr/> <p>Sliding Friction</p> <p><i>A force that resists or opposes an object's motion when it slides across a surface.</i></p> <p>The strength of the frictional force depends on the following:</p> <ol style="list-style-type: none"> The surface composition of both objects The normal force the surface exerts on the object moving over it. <p>Questions: Which frictional force is greater? Why?</p> <ol style="list-style-type: none"> Tires skidding on dry pavement OR wet pavement An empty box OR a full box of books sliding across the floor 	<p>Display Slide 47. Sliding Friction (3 min)</p> <ol style="list-style-type: none"> Review the definition of sliding friction on the slide and discuss the key points about the strength of a frictional force. Present the alternatives on the slide and elicit participants' ideas and reasoning. <p>Key ideas:</p> <ul style="list-style-type: none"> The liquid on wet pavement reduces friction between the tires and the ground, so tires skidding on dry pavement create a greater frictional force. A box full of books generates a greater frictional force because the weight of the box causes the surface bumps on the box and the

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			floor to push together more closely.
		<p>Sliding Friction</p> <p>Scenario: Two identical hockey pucks glide over different surfaces: smooth ice and playground asphalt.</p> <p>Draw all of the forces acting on the hockey pucks.</p> <div style="display: flex; justify-content: space-around;"> <div style="text-align: center;"> <p>Smooth Ice</p>  </div> <div style="text-align: center;"> <p>Playground Asphalt</p>  <p><small>Courtesy of Hector Alvarez</small></p> </div> </div>	<p>Display Slide 48. Sliding Friction (7 min)</p> <ol style="list-style-type: none"> a. Distribute handout 6.11 (Friction and Sliding Hockey Pucks) and introduce the scenario. b. Individuals: Ask participants to draw the forces acting on each of the hockey pucks and answer the questions on the handout. c. Whole group: Discuss participants' diagrams and responses to the handout questions. <p>Note:</p> <ul style="list-style-type: none"> • Participants should draw a downward-pointing arrow representing weight/gravity and an upward-pointing arrow representing normal force. Other arrows should represent the direction the pucks are gliding across each surface, as well as the opposing force of friction.
		<p>Static Friction</p> <p><i>A force that opposes the initial push on an object to get it moving.</i></p> <p>Key ideas:</p> <ul style="list-style-type: none"> • Static friction acts in the opposite direction of the <i>intended</i> motion of an object. • The force of friction equals the force of the push, so the object doesn't move. • The strength of the frictional force is just enough to resist the opposing force pushing on the object. • Maximum strength can be reached by applying a larger force. 	<p>Display Slide 49. Static Friction (2 min)</p> <ol style="list-style-type: none"> a. Review the definition of static friction on the slide and highlight the key ideas. b. Encourage participants to ask questions and offer observations. Make sure they understand that static friction acts on an object that isn't moving yet.

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Static Friction</p> <p>Scenario: A child tries and tries to push a box of science books, but the box doesn't budge. Then his father comes along and gives the box a good shove with his boot to get it moving.</p>  <p style="text-align: center;"><small>Courtesy of Hector Alvarez</small></p>	<p>Display Slide 50. Static Friction (8 min)</p> <ol style="list-style-type: none"> Distribute handout 6.12 (Pushing a Box against Static Friction) and introduce the scenario. Individuals: Ask participants to draw the forces and change in motion in each instance and then answer the questions on the handout. Whole group: Discuss participants' diagrams and responses to the handout questions. <p>Key ideas:</p> <ul style="list-style-type: none"> When the child tries to push the box in either direction, it doesn't budge, so the opposing frictional force is equal to the force the child exerts on it. For box to move, a larger force is necessary than the child is able to exert. The force the father exerts when he shoves the box with his boot is greater than the static friction, and the box begins to move. Static friction grows to match the force the child exerts on the box. As long as the box isn't moving, the net force is zero, and so is the acceleration.

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
<p>12:45–1:15 30 min</p> <p>Content Deepening (Continued)</p> <p>Slides 51–56</p>	<p>Purpose</p> <ul style="list-style-type: none"> Expand participants' science-content knowledge of frictional forces. <p>Content</p> <ul style="list-style-type: none"> <i>Friction</i> is a force that acts in the opposite direction of an object's motion, causing the object to slow down and eventually stop. Rolling friction and sliding friction act in the opposite direction of motion when an object rolls or slides over a surface. The strength of a frictional force depends on (1) the surface composition of the objects in contact, and (2) the normal force the surface exerts on the object moving over it. Static friction opposes the initial push on an object to get it moving. The force of friction equals the force of the push, so the object doesn't move. <p>What Participants Do</p> <ul style="list-style-type: none"> Engage in a challenge that involves determining the frictional forces acting on a refrigerator. Revise their answers to the focus question, <i>Why do moving objects slow down and eventually stop?</i> <p>Handouts in PD Binder</p> <ul style="list-style-type: none"> 6.13 Moving a Refrigerator 	<div data-bbox="835 256 1297 863"> <p>Challenge: Moving a Refrigerator</p> <p>Scenario: A refrigerator is resting on the floor. A worker tries to push the fridge, but it won't budge because it's too heavy. The worker exerts more effort, and the fridge starts sliding across the floor. The worker flings the fridge to the right, and it slides a short distance across the floor before stopping.</p>  </div> <div data-bbox="835 873 1297 1393"> <p>Challenge: Moving a Refrigerator</p>  <ol style="list-style-type: none"> What types of friction are exerted on the fridge? What change could you make to increase the friction acting on the fridge? Explain how this change increases friction. What change could you make to decrease the friction? Explain how this change decreases friction. </div>	<p>Display Slide 51. Challenge: Moving a Refrigerator (8 min)</p> <ol style="list-style-type: none"> “Are you ready to show what you know about friction? Our next challenge involves moving a refrigerator.” Distribute handout 6.13 (Moving a Refrigerator) and introduce the scenario. Then read through the instructions on the handout. Individuals: Have participants complete the first page of the handout, using black ink to show the forces acting on the fridge and red ink to show the change in motion. Then have them answer the challenge questions on page 2. <p>Display Slide 52. Challenge: Moving a Refrigerator (7 min)</p> <p>Note: Display page 1 of the handout on a document reader or overhead projector to mark up during this discussion.</p> <ol style="list-style-type: none"> Invite participants to share their diagrams from the handout. As participants share their ideas, mark up a copy of the diagram showing the forces acting on the fridge, the net force, and the change in motion/acceleration. <p>Note: Alternatively, you could display a participant's completed diagram or have participants copy their diagrams onto chart paper or a Smart Board.</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
	<p>Supplies</p> <ul style="list-style-type: none"> • Science notebooks • Chart paper and markers • Black and red pens (or markers) 	<hr style="border: 2px solid #808080;"/> <p>Challenge: Moving a Refrigerator</p> <ul style="list-style-type: none"> • What is the direction of a frictional force on an object at rest that someone is trying to slide across a surface? • Why are heavy objects harder to slide across the floor than light-weight objects? 	<p>b. Discuss the challenge questions on page 2 of the handout. During this discussion, encourage participants to agree or disagree with the ideas others share, add other ideas, and ask questions.</p> <p>Ideal responses:</p> <ul style="list-style-type: none"> • Question 1: Static friction and sliding friction are acting on the fridge. • Question 2: To increase the friction, we could increase the weight of the fridge. More weight will cause the bumps on the surfaces of the fridge and the floor to press together more closely, which will generate greater friction. • Question 3: To decrease the friction, we could put some oil on the ground. The layer of oil will separate the surfaces so they aren't pressing together as closely, which will reduce friction between the fridge and the floor. <p>Display Slide 53. Challenge: Moving a Refrigerator (5 min)</p> <p>a. Read the questions on the slide.</p> <p>b. “Based on everything you’ve learned about friction so far, how would you answer these questions?”</p> <p>c. During this discussion, encourage participants to agree or disagree with others’ ideas, add on, and ask questions.</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p style="background-color: #d3d3d3; margin: 0; padding: 2px;">Reflect: Content Deepening Focus Question 1</p> <p>Why do moving objects slow down and eventually stop?</p>	<p>Display Slide 54. Reflect: Content Deepening Focus Question 1 (6 min)</p> <ol style="list-style-type: none"> a. Revisit the content deepening focus question on the slide. b. “How would you revise your answers to this focus question based on our content deepening work today? Do you have any new ideas to add or other changes you’d like to make?” c. Individuals: Ask participants to spend a few minutes reviewing and revising the answers they wrote in their notebooks earlier. Remind them to include evidence from today’s investigations. d. Whole group: Invite a few participants to share their revised answers with the group, using science ideas about friction and evidence from the content deepening investigations. e. As participants share their responses, record key ideas on chart paper. During this share-out, encourage participants to agree or disagree, add on, or ask questions.

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p> Key Science Ideas</p> <ul style="list-style-type: none"> • Friction is a force that acts in the opposite direction of an object’s motion, causing the object to slow down and eventually stop. • Tiny bumps on the surfaces of two objects generate friction by pushing against one another. • Rougher surfaces create more friction than smoother surfaces. • Greater friction causes objects to slow down and stop more quickly on rougher surfaces. • Less friction causes objects to travel farther over smoother surfaces before stopping. 	<p>Display Slide 55. Key Science Ideas (2 min)</p> <p>a. Review the key science ideas on the slide.</p> <p>b. Ask participants, “Do you agree with these key ideas? Would you like to revise anything?”</p>
		<p> Key Science Ideas</p> <ul style="list-style-type: none"> • Rolling friction and sliding friction act in the opposite direction of motion when an object rolls or slides over a surface. • The strength of a frictional force depends on (1) the surface composition of the objects in contact, and (2) the normal force the surface exerts on the object moving over it. • Static friction opposes the initial push on an object to get it moving. The force of friction equals the force of the push, so the object doesn’t move. 	<p>Display Slide 56. Key Science Ideas (2 min)</p> <p>a. Review the key science ideas on the slide.</p> <p>b. Ask participants, “Do you agree with these key ideas? Would you like to revise anything?”</p>
<p>1:15–3:15 120 min (Includes 10-min break)</p> <p>Lesson Analysis: SCSL Strategy C</p>	<p>Purpose</p> <ul style="list-style-type: none"> • Use lesson analysis of classroom videos to better understand SCSL strategy C. • Deepen participants’ science-content knowledge of forces through lesson analysis. <p>Content</p> <ul style="list-style-type: none"> • To reflect the purpose and key features of strategy C, activities 	<p>Lesson Analysis: Focus Question 2</p> <p>How can selecting appropriate science activities help students develop a coherent science content storyline?</p>	<p>Display Slide 57. Lesson Analysis: Focus Question 2 (1 min)</p> <p>a. Read the focus question on the slide.</p> <p>b. “To help us answer this question, we’re going to explore STeLLA strategy C: Select activities that are matched to the learning goal.”</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
Slides 57–63	<p>should be selected that can help students engage in making sense of the main learning goal, not because they're fun, easy to do, or only topically related.</p> <p>What Participants Do</p> <ul style="list-style-type: none"> • Make and discuss a chart summarizing the purpose and key features of strategy C. • Use the criteria in Analysis Guide C to analyze video clips from an SEC lesson (before, during, and after an activity). • Identify activities that are <i>not</i> matched to the lesson's main learning goal. <p>Videos</p> <ul style="list-style-type: none"> • Video Clip 6.3, Torres classroom • Video Clip 6.4, Torres classroom • Video Clip 6.5, Torres classroom <p>Handouts in PD Binder</p> <ul style="list-style-type: none"> • 6.4 Analysis Guide C • 6.5 Transcript for Video Clip 6.3 • 6.6 Transcript for Video Clip 6.4 • 6.7 Transcript for Video Clip 6.5 <p>Supplies</p> <ul style="list-style-type: none"> • Chart paper and markers <p>PD Resources</p> <ul style="list-style-type: none"> • STeLLA strategies booklet <p>Resources in Lesson Plans Binder</p> <p><i>Resources section:</i></p>	<p>Strategy C: Purpose and Key Features</p> <p>According to the strategies booklet, what are the purpose and key features of strategy C: Select activities that are matched to the learning goal?</p>	<p>Display Slide 58. Strategy C: Purpose and Key Features (25 min)</p> <ol style="list-style-type: none"> Ask participants to locate the section on strategy C in the STeLLA strategies booklet. Have one participant lead the group in creating a chart that summarizes the purpose and key features of strategy C: Select activities that are matched to the learning goal. Ask: "What does the strategies booklet say about science activities that are fun and engaging for students?" <p>Ideal responses:</p> <ul style="list-style-type: none"> • Activities should be selected because they can support students in understanding the main learning goal, <i>not</i> because they're fun or easy to do. • Avoid activities that are only topically related (e.g., something about forces); instead, activities should focus on a specific science idea that is closely linked to the main learning goal (e.g., Arrows can be used to represent the strength and direction of a force). • Activities should not just be interesting supplements to the science content storyline; they should help develop it. <ol style="list-style-type: none"> Follow-up: "Think back on science-lab activities in high school or college. Did these activities play a key role in helping you better understand the science concepts presented in textbooks or lectures? Or were they more like add-on activities that were only loosely related to the science concepts being taught?"

	<ul style="list-style-type: none"> Content background document 	<p>Lesson Analysis Question</p> <p>Main Learning goal: Objects slow down and stop at different distances on different surfaces.</p> <p>Focus question: Why do moving objects slow down and eventually stop?</p> <p>Activity: Students roll a toy car down a ramp and over three different surfaces—carpet, tile, and sandpaper—to determine the distance traveled over each surface.</p> <p>Analysis question: Is the activity well matched to the main learning goal?</p>	<p>Display Slide 59. Lesson Analysis Question (2 min)</p> <ol style="list-style-type: none"> For this lesson analysis, participants will view a set of three video clips from one Forces lesson. Review the main learning goal, focus question, and activity on the slide. Then introduce the analysis question: <i>Is the activity well matched to the main learning goal and focus question?</i>
10-MINUTE BREAK			
		<p>Lesson Analysis: Strategy C</p> <ol style="list-style-type: none"> Write this main learning goal at the top of Analysis Guide C (handout 6.4): <ul style="list-style-type: none"> <i>Objects slow down and stop at different distances on different surfaces.</i> For this analysis, we'll watch three video clips from the same Forces lesson. Before each clip: Read the lesson context at the top of the corresponding video transcript. After each clip: Complete part 1 of the analysis guide. <p style="font-size: small; margin-left: 20px;">Links to Torres video clips: 6.3_mspcp_gr3.forces_torres_L3_c1; 6.4_mspcp_gr3.forces_torres_L3_c2; 6.5_mspcp_gr3.forces_torres_L3_c3</p> 	<p>Display Slide 60. Lesson Analysis: Strategy C (60 min)</p> <p>Note: Refer to the content background document as needed throughout this lesson analysis.</p> <ol style="list-style-type: none"> Have participants locate Analysis Guide C (handout 6.4) in their PD binders and write the main learning goal for the selected Forces lesson at the top. Then orient them to part 1 of the analysis guide. Before each video clip: Have participants read the lesson context at the top of the corresponding video transcript (handout 6.5 for clip 3, handout 6.6 for clip 4, and handout 6.7 for clip 5). Show each video clip. After each clip (individuals or pairs): Allow

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>time for participants to review the analysis guide, write down science ideas revealed in the activity, and assess how well matched these ideas are to the main learning goal.</p> <p>Note: For sample responses for the analysis-guide tasks, see PD Leader Master: Analysis Guide C: Selecting Activities Matched to the Learning Goal (Answer Key).</p>
		<p>Lesson Analysis: Strategy C</p> <p>Discuss these questions with a partner:</p> <ol style="list-style-type: none"> 1. Were the activities well matched to the learning goal? Provide evidence to support your response. 2. Suggest ways to improve the match between the activities and the main learning goal (part 2, Analysis Guide C). <p>Be prepared to share your ideas in a group discussion.</p>	<p>Display Slide 61. Lesson Analysis: Strategy C (10 min)</p> <ol style="list-style-type: none"> a. Pairs: “Discuss the questions on the slide and be ready to share your ideas with the group.” b. Whole group: Assess how well the activities in the video clips matched the main learning goal and ask participants to offer suggestions for improving the match.
		<p>Lesson Analysis: Strategy C</p> <p>Study the video transcripts again and gather evidence to answer these questions:</p> <ul style="list-style-type: none"> • What kept students focused on the main learning goal? • What distracted students from the learning goal? 	<p>Display Slide 62. Lesson Analysis: Strategy C (5 min)</p> <ol style="list-style-type: none"> a. Read the questions on the slide. b. Individuals: Direct participants to look for evidence in the video transcripts that will help them answer these questions. c. Whole group: Ask one or two participants to share their ideas and evidence in response to the questions.

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Practice: Strategy C</p> <p>Examine the main learning goal, focus question, lesson summary, and activity phase for your assigned lesson from the Forces unit.</p> <p>Questions:</p> <ul style="list-style-type: none"> • Are the activities matched to the learning goal? • If so, how will students learn the content through this activity? • If not, how might the activity be modified to match the main learning goal? 	<p>Display Slide 63. Practice: Strategy C (7 min)</p> <p>Note: This activity may be skipped if time is running short.</p> <p>a. Assign each participant one of the Forces lessons. Direct participants to quickly examine the main learning goal, focus question, lesson summary, and activity phase for their assigned lessons.</p> <p>b. Individuals (2–3 min): “Think about how well the activities in your assigned lesson are matched to the main learning goal. Be prepared to give a rationale for your choices.”</p> <p>c. Whole group: Invite participants to share their ideas and reasoning with the group.</p>
<p>3:15–3:30 15 min</p> <p>Wrap-Up: Summary, Homework, and Reflections</p>	<p>Purpose</p> <ul style="list-style-type: none"> • Summarize and reflect on key ideas about Strategies B, I, 7, and C, and the Forces science content. <p>What Participants Do</p> <ul style="list-style-type: none"> • Review today’s focus questions. • Share key ideas about strategies B, I, 7, and C from the lesson analysis and content deepening 	<p>Today’s Focus Questions</p> <ul style="list-style-type: none"> • How can we begin and end a lesson to help students develop a coherent science content storyline? • How can selecting appropriate science activities help students develop a coherent science content storyline? • Why do moving objects slow down and eventually stop? • What force makes a moving object slow down and eventually stop? 	<p>Display Slide 64. Today’s Focus Questions (Less than 1 min)</p> <p>a. Remind participants of today’s focus questions.</p>
