

RESPECT Summer Institute Professional Development Leader Guide (PDLG)

Grade Level	3	Day	8	STeLLA Strategy	SCSL Strategy F: Link Science Ideas and Activities SCSL Strategy G: Link Science Ideas to Other Science Ideas SCSL Strategy H: Highlight Science Ideas and Focus Question	Subject Matter Focus	Forces
Focus Questions	<ul style="list-style-type: none"> • How can science content storyline coherence be enhanced by explicitly implementing STeLLA strategy F (Make explicit links between science ideas and activities), strategy G (Link science ideas to other science ideas), and strategy H (Highlight key science ideas and focus question throughout)? • How will the Student Thinking Lens and Science Content Storyline Lens strategies help you teach the Forces lessons in the fall? • How can ideas about forces help us explain the motion of objects? • What is the difference between mass and weight? • How does precision in defining quantities affect our ability to analyze relationships between quantities and understand the world around us? 						
Main Learning Goals	<p>Participants will understand the following:</p> <ul style="list-style-type: none"> • Strategies F, G, and H are all useful in constructing a coherent science content storyline. Strategy F ensures that students are thinking about science ideas before, during, and after each activity; strategy G focuses on making connections among key science ideas that are developed within and across lessons; and strategy H makes sure that key science ideas are highlighted for students throughout a lesson. • All of the SCSL and STL teaching strategies are highlighted in the Forces lesson plans that teachers will use in the fall. These lessons will support teachers in using and deepening their understandings of the STeLLA strategies. • Understanding the difference between mass and weight is key to understanding forces on Earth and in space. • Ideas about forces, net force, gravity, normal force, friction, speed, velocity, and acceleration can be used to predict and explain real-world observations of objects at rest or in motion. • Precise language in defining quantities facilitates viable comparisons of those quantities. • Precise language in defining quantities requires a rich understanding of a problem and can be used as a tool for analyzing novel situations. • A carefully defined quantity will convey a meaning for all values of the quantity, especially a meaning for zero and positive-versus-negative values. 						
Preparation				Materials		Videos	
Daily Setup Tasks				Posters and Charts		Video clips from one Forces lesson:	
<ul style="list-style-type: none"> • Check that video clips are correctly linked to PowerPoint (PPT) slides. • Set up PowerPoint. • Make sure video clips play correctly with good 				<ul style="list-style-type: none"> • STeLLA Framework and Strategies poster • Day-8 Agenda (chart) • Day-8 Focus Questions (chart) • Norms for Working Together (chart) 		<ul style="list-style-type: none"> • Video Clip 8.1: Wilde classroom (strategy F; before the activity); 8.1_mspcp_gr.3.forces_wilde_L4_c5 • Video Clip 8.2: Wilde classroom (strategy F; 	

<p>sound.</p> <ul style="list-style-type: none"> • Arrange furniture and food. • Arrange participant materials. • Put up posters and charts. <p>Planning and Preparation Tasks</p> <ul style="list-style-type: none"> • Study the PDLG, PowerPoint slides (PPTs), video clips, and handouts. Make changes to PPTs if needed. Modify text highlighted in light-blue font on slides and/or in PDLG to make it specific for your group • Review the reflections from day 7 and create a summary slide. • Watch the video clips and anticipate participant responses. • Prepare charts for the day’s agenda and focus questions. • Prepare two charts to use during the lesson plan review (see slides 16 and 17). These charts will highlight which STL and SCSL strategies are covered in each lesson. • Insert some possible meeting dates for school-year study-group meetings on PPT slide 20. • Decide how you want to celebrate the end of the Summer Institute and insert those plans on the relevant PPT slide. (See some celebration suggestions in the leader notes for slide 52.) • Review the activity for Forces lesson 6b in the lesson plans binder. • For content deepening: <ul style="list-style-type: none"> • Make enough copies of the scenario pictures from handout 8.10 so that each team member will have a picture corresponding to the team’s assigned scenario (from handout 8.9). • Assemble props for team skits (see Supplies section). • Review the four investigations that correspond with handouts 8.12–8.15 and decide which would be most beneficial for participants if there isn’t enough time to 	<ul style="list-style-type: none"> • Effective Science Teaching chart (from day 1) • Strategy charts from days 1–7 (STL strategies 1–7 and SCSL strategies A, B, C, D, I) • Chart of STL strategies highlighted in lesson plans (see PPT 16 for model) • Chart of SCSL strategies highlighted in lesson plans (see PPT 17 for model) • Parking Lot poster <p>Handouts in RESPeCT PD Binder Front Pocket</p> <ul style="list-style-type: none"> • Z-fold summary chart: Science Content Storyline Lens Strategies <p>Handouts in RESPeCT PD Binder, Day 8</p> <ul style="list-style-type: none"> • 8.1 Analysis Guide F: Making Explicit Links between Science Ideas and Activities • 8.2 Analysis Guide G: Linking Science Ideas to Other Science Ideas (optional) • 8.3 Analysis Guide H: Highlighting Key Science Ideas and Focus Question (optional) • 8.4 Transcript for Video Clip 8.1 • 8.5 Transcript for Video Clip 8.2 • 8.6 Transcript for Video Clip 8.3 • 8.7 Transcript for Video Clip 8.4 (optional) • 8.8 Overview of School-Year RESPeCT Study Groups • 8.9 Scenario Cards (1 card/page per team) (from Forces lesson 6b) • 8.10 Scenario Pictures (1 per participant for assigned scenario) (from Forces lesson 6b) • 8.11 Mass versus Weight • 8.12 Paddleball • 8.13 Toy Car • 8.14 Hockey Puck in Motion • 8.15 Ball on an Incline • 8.16 Carefully Defining Quantities <p>Supplies</p> <ul style="list-style-type: none"> • Science notebooks • Chart paper and markers 	<p>during the activity); 8.2_mspcp_gr.3.forces_wilde_L4_c6–7</p> <ul style="list-style-type: none"> • Video Clip 8.3: Wilde classroom (strategy F; after the activity); 8.3_mspcp_gr.3.forces_wilde_L4_c8–9 <p>Optional video clip from another Forces lesson:</p> <ul style="list-style-type: none"> • Video Clip 8.4: Wilde classroom (strategies G and H; review of the activity); 8.4_mspcp_gr.3.forces_wilde_L5_c10 <p>For content deepening:</p> <ul style="list-style-type: none"> • <i>Explanation: Inclined Plane by Dr. Hector Mireles</i> (YouTube video); English version: https://www.youtube.com/watch?v=wB1lbcG-rpk; Spanish version: https://www.youtube.com/watch?v=V8aYEWPW-Es

DAY 8 SESSION OUTLINE

Time	Activities	Purpose
8:00–8:15 15 min	Getting Started: Housekeeping, Agenda, Day-7 Reflections, Norms, Focus Questions	<ul style="list-style-type: none"> • Build community by sharing participants' reflections from day 7. • Set the stage for a day of learning.
8:15–8:55 40 min	Introducing SCSL Strategies F, G, and H	<ul style="list-style-type: none"> • Deepen participants' knowledge of the purposes and key features of SCSL strategies F, G, and H. • Develop participants' understandings of the similarities and differences among strategies F, G, and H.
8:55–10:30 95 min (Includes 10-min break)	Lesson Analysis: SCSL Strategies F, G, and H	<ul style="list-style-type: none"> • Develop participants' ability to identify and analyze strategies F, G, and H in Forces lesson video clips. • Deepen participants' science-content knowledge of forces through lesson analysis.
10:30–12:00 90 min	The Forces Lesson Plan Review and Fall Overview/Logistics	<ul style="list-style-type: none"> • Deepen participants' understandings of the Forces lesson plans and the opportunities they provide to practice using STeLLA STL and SCSL strategies. • Help participants understand and feel comfortable with the fall activities and logistics.
12:00–12:45 45 min	LUNCH	
12:45–3:00 135 min (Includes 10-min break)	Science and Math Content Deepening: Forces	<ul style="list-style-type: none"> • Engage participants in synthesizing and summarizing science ideas about forces by explaining and acting out real-life scenarios from Forces lesson 6b. • Deepen participants' understandings of the difference between mass and weight and how they can be used to explain forces on Earth and in space. • Improve participants' abilities to analyze forces, speed, velocity, acceleration, and net force in real-world examples. • Facilitate participants' understandings of the importance of precision in defining quantities for better comprehension of quantitative relationships.
3:00–3:30 30 min	Wrap-Up and Celebration	<ul style="list-style-type: none"> • Help participants understand the relationships among the Science Content Storyline Lens strategies and when each strategy occurs in the lesson flow. • Facilitate understanding which SCSL strategies must be addressed in the planning process and which need to be anticipated in planning but occur responsively during the actual teaching of the lesson. • Recognize and celebrate participants' learning so far and anticipate further growth in the coming year.

DAY 8

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process

Highlight key science ideas and focus question throughout.		I. Summarize key science ideas.	<p>Display Slide 5. STeLLA Conceptual Framework (1 min)</p> <p>a. “Today we’ll focus on three Science Content Storyline Lens strategies, all of which make explicit links to science ideas:</p> <ul style="list-style-type: none"> • Strategy F explicitly links science ideas to activities that students are doing. • Strategy G explicitly links science ideas to other science ideas. • Strategy H explicitly highlights key science ideas and links them back to the focus question.” <p>b. “We won’t address strategy E about sequencing science ideas and activities until the school year, since you’ll learn a lot about sequencing from teaching the RESPeCT lesson plans.”</p>
STRATEGIES TO REVEAL, SUPPORT, AND CHALLENGE STUDENT THINKING	STRATEGIES TO CREATE A COHERENT SCIENCE CONTENT STRUCTURE																						
1. Ask questions to elicit student ideas and predictions.	A. Identify one main learning goal.																						
2. Ask questions to probe student ideas and predictions.	B. Set the purpose with a focus question or goal statement.																						
3. Ask questions to challenge student thinking.	C. Select activities that are matched to the learning goal.																						
4. Engage students in analyzing and interpreting data and observations.	D. Select content representations and models matched to the learning goal and engage students in their use.																						
5. Engage students in constructing explanations and arguments.	E. Sequence key science ideas and activities appropriately.																						
6. Engage students in using and applying new science ideas in a variety of ways and contexts.	F. Make explicit links between science ideas and activities.																						
7. Engage students in making connections by differentiating and summarizing key science ideas.	G. Link science ideas to other science ideas.																						
8. Engage students in communicating in scientific ways.	H. Highlight key science ideas and focus question throughout.																						
	I. Summarize key science ideas.																						
<p>8:15–8:55 40 min</p> <p>Introducing SCSL Strategies F, G, and H</p>	<p>Purpose</p> <ul style="list-style-type: none"> • Deepen participants’ knowledge of the purposes and key features of SCSL strategies F, G, and H. • Develop participants’ understandings of the similarities and differences among strategies F, G, and H. <p>Content</p> <ul style="list-style-type: none"> • While strategies F, G, and H help students construct meaning from 	<p>Lesson Analysis: Focus Question 1</p> <p>How can science content storyline coherence be enhanced by explicitly implementing STeLLA strategy F (Make explicit links between science ideas and activities), strategy G (Link science ideas to other science ideas), and strategy H (Highlight key science ideas and focus question throughout)?</p>	<p>Display Slide 6. Lesson Analysis: Focus Question 1 (Less than 1 min)</p> <p>a. Read the focus question on the slide.</p>																				

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
Slides 6–8	<p>the science content storyline, each strategy has its own specific purpose.</p> <ul style="list-style-type: none"> In strategy F, activities that students carry out should be explicitly linked to the science content storyline so the science ideas are made visible to students before, during, and after an activity. In strategy G, science ideas introduced in a lesson should be clearly and explicitly linked to the main learning goal(s) within and across lessons. In strategy H, the science content storyline is easier for students to construct if the main learning goal, supporting science ideas, and flow of events are highlighted at key points during the lesson. <p>What Participants Do</p> <ul style="list-style-type: none"> Make, share, and discuss charts summarizing the purposes and key features of strategies F, G, and H. <p>PD Resources</p> <ul style="list-style-type: none"> STeLLA strategies booklet SCSL Z-fold summary chart (front pocket of PD binder) 	<p>SCSL Strategies F, G, and H: Purposes and Key Features</p> <p>Group 1:</p> <ul style="list-style-type: none"> What are the purposes and key features of strategy F? Why is this strategy important for science content storyline coherence? <p>Group 2:</p> <ul style="list-style-type: none"> What are the purposes and key features of strategy G? Why is this strategy important for science content storyline coherence? <p>Group 3:</p> <ul style="list-style-type: none"> What are the purpose and key features of strategy H? Why is this strategy important for science content storyline coherence? 	<p>Display Slide 7. SCSL Strategies F, G, and H: Purposes and Key Features (30 min)</p> <p>a. Small groups: Divide participants into three groups to make charts that capture the purposes and key features of strategies F, G, and H. Direct groups to refer to their Z-fold summary charts and the STeLLA strategies booklet.</p> <p>b. Whole group: Have small groups share their charts with the entire group.</p> <p>c. Challenge participants to imagine themselves in their Teacher Leader roles. Ask them, “How would you explain these strategies to the teachers you’re leading?”</p>
		<p>SCSL Strategies F, G, and H: Discussion Question</p> <p>What’s similar and different about these three strategies?</p>	<p>Display Slide 8. SCSL Strategies F, G, and H: Discussion Question (10 min)</p> <p>Note: This slide may be skipped if similarities and differences were addressed in the previous discussion.</p> <p>a. Individuals (3 min): “Look at your three strategy charts, your Z-fold summary charts, and the strategies booklet as you think about the question on the slide.”</p> <p>b. Whole group: Have participants share their ideas about the three strategies.</p> <p>Key ideas about strategies F, G, and H:</p> <p>1. Similarities:</p> <p>a. These strategies are all focused on linking complete sentence-length science ideas: Strategy F links science ideas to activities,</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>strategy G links science ideas to other science ideas, and strategy H highlights key science ideas and links them to the focus question throughout the lesson.</p> <p>b. All of these strategies emphasize making the links explicit, not just assuming that students will see the intended links.</p> <p>c. All of these strategies can and should occur throughout the lesson.</p> <p>2. Differences:</p> <p>a. Strategy F explicitly links science ideas to student activities.</p> <p>b. Strategy G explicitly links science ideas to other science ideas.</p> <p>c. Strategy H explicitly highlights key science ideas and links them back to the focus question.</p>
<p>8:55–10:20 95 min (Includes 10-min break)</p> <p>Lesson Analysis: SCSL Strategies F, G, and H</p> <p>Slides 9–13</p>	<p>Purpose</p> <ul style="list-style-type: none"> Develop participants’ ability to identify and analyze strategies F, G, and H in Forces lesson video clips. Deepen participants’ science-content knowledge of forces through lesson analysis. <p>Content</p> <ul style="list-style-type: none"> In strategy F, activities that students carry out should be explicitly linked to the science content storyline so the science ideas are made visible to students before, during, and after an 	<p>Preparing for Video-based Lesson Analysis</p> <p>Read Analysis Guide F, part 1.</p> <ol style="list-style-type: none"> What is the difference between the main learning goal and supporting science ideas? What is similar about the main learning goal and supporting science ideas? 	<p>Display Slide 9. Preparing for Video-based Lesson Analysis (5 min)</p> <p>a. “Next we’re going to watch a series of three classroom video clips from one lesson on forces. The first clip takes place before students begin the activity. The second shows students while they’re working on the activity, and the third clip shows the teacher following up with students after the activity. Our focus for this analysis will be strategy F.”</p> <p>b. Have participants locate Analysis Guide F (handout 8.1) in their PD program binders.</p> <p>c. Tell participants that part 1 of the guide provides the context for the video clips.</p> <p>d. Individuals: “Read part 1 of the analysis guide and</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
	<p>activity.</p> <ul style="list-style-type: none"> In strategy G, science ideas introduced in a lesson should be clearly and explicitly linked to the main learning goal(s) within and across lessons. In strategy H, the content storyline is easier for students to construct if the main learning goal, supporting science ideas, and flow of events are highlighted at key points during the lesson. <p>What Participants Do</p> <ul style="list-style-type: none"> Identify and analyze the use of strategy F in four classroom video clips. Identify and analyze the use of strategies F, G, and H in transcripts from the same four video clips. <p>Videos</p> <ul style="list-style-type: none"> Video Clip 8.1, Wilde classroom (before the activity) Video Clip 8.2, Wilde classroom (during the activity) Video Clip 8.3, Wilde classroom (after the activity) Video Clip 8.4, Wilde classroom (review of the activity) (optional) <p>Handouts in PD Binder</p> <ul style="list-style-type: none"> 8.1 Analysis Guide F 8.2 Analysis Guide G (optional) 8.3 Analysis Guide H (optional) 8.4 Transcript for Video Clip 8.1 	<p style="text-align: center;">Lesson Analysis: Strategy F</p> <ol style="list-style-type: none"> Read the context at the top of each transcript and then watch the corresponding clip: <ul style="list-style-type: none"> Video clip 1: setup for the activity Video clip 2: during the activity Video clip 3: follow-up to the activity For each clip, use the criteria in part 2 of Analysis Guide F to analyze how well science ideas were linked to the activity. <p style="text-align: center;"><small>Links to video clips 1–3: 8.1_mspcp_gr.3.forces_wilde_L4_c5; 8.2_mspcp_gr.3.forces_wilde_L4_c6-7; 8.3_mspcp_gr.3.forces_wilde_L4_c8-9</small></p>	<p>be prepared to discuss the two questions on the slide.”</p> <p>e. Show video clip 3 and then guide participants through these tasks:</p> <ul style="list-style-type: none"> • Individuals: “Study the video transcript and complete part 2, section 3 of the analysis guide, Follow-up to the Activity.” • Whole group: Ask participants to share their analyses of the video clip. <p>Sample analysis for video clip 1:</p> <ul style="list-style-type: none"> • Overview: In the setup, the teacher helps students clarify that the force that made the car move—gravity—was always the same regardless of the surface it rolled over. This is a key idea, since the common misconception is that the car stops because it “runs out of force.” Since the initial force is the same each time, something else must be

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>causing the car to stop at different distances. In this clip, the teacher allows students to surface their initial ideas. When Eliza voices the common misconception that the force must be different each time, the teacher uses probe and challenge questions to support the whole class in reconsidering and solidifying their thinking around what force made the car start moving versus what force caused the car to stop moving.</p> <ul style="list-style-type: none"> • Question a: Students don't discuss or write about the focus question. Instead, the teacher uses a review of the car-and-ramp data to set up the focus question, <i>If gravity is the force that started the motion and gravity didn't change, then why do the cars stop?</i> • Question b: Explicit links are made between the car-and-ramp activity and science ideas: <ul style="list-style-type: none"> • Video segments 00:02–00:52—Gravity starts the motion by pulling the car (not pushing it). • Segments 00:57–02:19—The force of gravity doesn't change as the car continues to roll down the ramp. • Question c: If students are following the teacher's logic, they should understand that the force of gravity keeps pulling on the car as it goes down the ramp. So what causes the car to stop? Thus, the teacher uses data and science ideas to set up the focus question. <p>Sample analysis for video clip 2:</p> <ul style="list-style-type: none"> • Question a: Yes, students make links to science ideas. They're trying to use their observations of the bumps on the three surfaces to come up with explanations for why the car stops at different distances as it travels over different surfaces. They're also using the hand-strip content representation in their reasoning (video segments 01:31–01:45; 02:23–03:05. Students come up with the idea that the smoother surfaces have tinier

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>“hands” to slow down the car.</p> <ul style="list-style-type: none"> • Question b: Yes, students should know they’re expected to link science ideas to their observations because the context at the top of the transcript indicates that students were examining the three surfaces in order to generate an explanation for why the toy car stopped at a different distance on each surface. <p>Sample analysis for video clip 3:</p> <ul style="list-style-type: none"> • Question a: Yes, science ideas are explicitly linked to the activity in the follow-up. Students first use their own ideas and language (e.g., “negativity,” “blocking,” “gravity”) to explain what causes the car to stop. The teacher then tells them that the force that stops the car is friction and has them write this word in their notebooks. • Question b: Yes, students are involved in making links between science ideas and the activity by identifying other examples of friction in their daily lives that causes objects to slow down and stop. • Missed opportunity: At video segment 03:56, the teacher asks a student, “What is the object that slows the ball down?” This is a missed opportunity to have students think about grass pushing on the ball as a force, not as an object. At segment 04:11, a student starts talking in a way that could suggest he’s thinking about grass applying a force. A probe question here would have been very helpful!

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p style="text-align: center;">Lesson Analysis: Strategies G and H</p> <ol style="list-style-type: none"> 1. Read the context at the top of the transcript (handout 8.7) and then watch video clip 4. 2. Use the criteria in Analysis Guide G to analyze how well science ideas were linked to other science ideas. 3. Use the criteria in Analysis Guide H to analyze how well the teacher highlighted key science ideas and the focus question throughout the lesson. <p style="text-align: right;"><small>Links to video clip 4: 8.4_mspcp_gr3.forces_wilde_L5_c10</small></p>	<p>Display Slide 11. 			<p>findings. Encourage listeners to agree or disagree, ask clarification questions, and add on.</p> <p>Sample analyses from the transcript for clip 4:</p> <ul style="list-style-type: none"> • Strategy F: In this clip, students clearly link their ideas about friction to the previous day’s activity, referencing how far the car traveled, the bumps on a surface, and the push caused by the bumps (pushing “hands”) as a force causing the car to slow down and stop. • Strategy G: An excellent example of a student making a link between two science ideas occurs at segment 04:17 when Giselle mentions that “you always can’t see friction, just like you can’t see gravity” (i.e., forces aren’t visible; we can only observe the results of forces when an object’s motion changes). Here the student is comparing and connecting what she knows about gravity and friction. • At video segments 02:50–04:11, students discuss whether air is a pushing force. In this discussion, they’re linking ideas about the bumps on solid surfaces with ideas about how air might push back against a ball’s motion. • Strategy G, strengthened: At segments 02:05–02:44, Lucy begins to connect the ideas about different-sized “hands” pushing back against motion and the amount of friction that the carpet, sandpaper, and tile surfaces generate. Perhaps with some probing (e.g., “Say more about ...”), Lucy could have explicitly connected pushing with friction. Then a challenge question might have helped her connect pushing and friction to the concept of forces (e.g., “What do the ideas of pushing and friction have to do with forces?”). • Strategy H: In this clip, the teacher’s primary highlighting strategy is to more clearly restate key ideas from student responses. Examples: <ul style="list-style-type: none"> • Segment 01:11: “So he’s saying the friction is

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process

			anytime after, but preferably within a month of, Study Group 5.
12:00–12:45 45 min	LUNCH		
12:45–3:00 135 min (Includes 10-min break) Content Deepening: Forces Slides 21–49	<p>Purpose</p> <ul style="list-style-type: none"> Engage participants in synthesizing and summarizing science ideas about forces by explaining and acting out real-life scenarios from Forces lesson 6b. Deepen participants' understandings of the differences between mass and weight and how they can be used to explain forces on Earth and in space. Improve participants' abilities to analyze forces, speed, velocity, acceleration, and net force in real-world examples. Facilitate participants' understandings of the importance of precision in defining quantities for better comprehension of quantitative relationships. <p>Content</p> <ul style="list-style-type: none"> Science ideas about forces can be used to explain the forces acting on objects in everyday life. Understanding the difference between mass and weight is key to understanding forces on Earth and in space. 	 <p>Content Deepening Homework</p> <p>Share a new idea or question from the content deepening homework.</p> <ul style="list-style-type: none"> What helped clarify your understandings of the science content? What idea was new to you? What idea were you confused about? What big idea do you think is important to highlight for students? What burning question do you have? 	<p>Display Slide 21. Content Deepening: Forces (Less than 1 min)</p> <p>a. “Now we’ll engage in some science and math content deepening to strengthen our understandings of forces and motion.”</p> <p>Note: Throughout this content deepening phase, refer as needed to the content background document and Common Student Ideas about Forces and Motion.</p> <hr/> <p>Display Slide 22. Content Deepening Homework (3 min)</p> <p>a. Invite participants to briefly share a new idea or question related to the content deepening homework from the previous session.</p> <p>b. Quickly address any misunderstandings or confusion, but don’t spend time discussing ideas that will be presented during today’s session (e.g., forces in outer space).</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
	<ul style="list-style-type: none"> Ideas about forces, net force, gravity, normal force, friction, speed, velocity, and acceleration can be used to predict and explain real-world observations of objects at rest or in motion. Precise language in defining quantities facilitates viable comparisons of those quantities. Precise language in defining quantities requires a rich understanding of a problem and can be used as a tool for analyzing novel situations. A carefully defined quantity will convey a meaning for all values of the quantity, especially a meaning for zero and positive-versus-negative values. <p>What Participants Do</p> <ul style="list-style-type: none"> Use science ideas about forces and motion to explain real-life scenarios and act them out. Explore the difference between weight and mass and their relationship to forces on Earth and in space. Use and apply science ideas to analyze the forces acting on objects in various scenarios. Brainstorm and describe examples of quantities. Define quantities in various scenarios using precise language. 	<hr/> <p>Content Deepening Focus Questions</p> <ul style="list-style-type: none"> How can we use our science-content knowledge about forces to explain and act out real-life scenarios? What is the difference between mass and weight? How does precision in defining quantities affect our ability to analyze relationships between quantities and understand the world around us? <hr/> <p>Content Deepening: Focus Question 1</p> <p>How can ideas about forces help us explain the motion of objects?</p>	<p>Display Slide 23. Content Deepening Focus Questions (Less than 1 min)</p> <p>a. Read the focus questions on the slide that will be the focus of today's content deepening work.</p> <hr/> <p>Display Slide 24. Content Deepening: Focus Question 1 (Less than 1 min)</p> <p>a. "We'll begin today's content deepening work by exploring how science ideas about forces can help us explain the motion of objects. This activity comes from Forces lesson 6b."</p> <p>b. Have participants write the focus question in their science notebooks and draw a box around it.</p>

If you prefer having participants measure from the perimeter of each building, you may want to adjust the lines on the slide. Whole group: Invite participants to share their definitions and solutions with the group. Make sure they’re using precise definitions and reasoning to define the quantities involved. <p data-bbox="1339 1206 1533 1230">Ideal response:</p> <ul data-bbox="1339 1239 1963 1417" style="list-style-type: none"> • In this scenario, Josh is walking from school to his house. As he passes Sara’s house, she joins him and walks with him to his house. That’s the activity. The quantities of interest are as follows: <ol data-bbox="1381 1369 1921 1417" style="list-style-type: none"> The distance in yards from Sara’s house to Josh’s house.

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>2. The distance in yards from the school to Josh's house.</p> <ul style="list-style-type: none"> A measure of 0 for the first quantity signifies that the distance from Sara's house is 0 yards, which means that Josh and Sara are right in front of Sara's house. A measure of 0 for the second quantity signifies that the distance from school to Josh's house is 0 yards, which means that Josh is at the school. The distance Josh walks from the school will be the distance he walks before Sara joins him (40 yards), plus the distance Sara walks with him to his house. So when Sara has walked 32 yards, Josh will have walked 72 yards.
		<p>Defining Quantities: Scenario 4</p> <p>Josh lives 100 yards from school, and Sara lives 40 yards from school along the same road. How far does Josh need to walk from home to meet Sara halfway through her walk home from school?</p> 	<p>Display Slide 47. Defining Quantities: Scenario 4 (5 min)</p> <ol style="list-style-type: none"> Introduce scenario 4 on the handout. Individuals: Have participants work through the tasks on the handout and answer the question. <p>Note: The ruling lines on the slide measure distances from the center of the buildings rather than the perimeter. If you prefer having participants measure from the perimeter of each building, you may want to adjust the lines on the slide.</p> Whole group: Invite one or two participants to share their definitions and solutions with the group. Make sure they're using precise definitions and reasoning to define the quantities involved. <p>Ideal response:</p> <ul style="list-style-type: none"> In this scenario, Josh is walking from home to the school. He is going to meet up with Sara when she is halfway from the school to her house and walk with her the rest of the way. That's the activity. The

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p data-bbox="789 667 1312 735">Carefully Defining Quantities: Negatives</p> <ul data-bbox="831 751 1255 1032" style="list-style-type: none"> • Carefully defining quantities makes the meaning of zero clear. • How could you carefully define quantities to make sense of negative numbers? • Can you think of ways the various distances defined in the four scenarios allow for interpretations of negative values like -10 or -20? • Work with a partner to come up with an example that involves negative numbers. 	<p data-bbox="1360 256 1780 285">quantities of interest are as follows:</p> <ol data-bbox="1381 293 1976 412" style="list-style-type: none"> 1. The distance in yards from the school to Sara's house. 2. The distance in yards from Josh's house to the school. <ul data-bbox="1335 423 1976 634" style="list-style-type: none"> • We know the sum of the two defined quantities will equal 100 yards because Josh's house is 100 yards from school, and Sara is walking home from school. When Sara is halfway home, the distance from the school to her house will be half of 40, or 20 yards. So Josh must walk 80 yards to meet her halfway through her walk. <p data-bbox="1335 670 1906 732">Display Slide 48. Carefully Defining Quantities Negatives (7 min)</p> <ol data-bbox="1335 781 1976 1357" style="list-style-type: none"> a. Walk participants through the scenario on the slide. b. Turn and Talk: Have participants pair up with an elbow partner and come up with an example of how carefully defined quantities in one of the scenarios would allow for interpretations of negative values. c. If participants are struggling with this challenge, use the following example: If Josh walked a distance of -20 yards from Sara's house toward the school, then he's actually 20 yards in the opposite direction of school from Sara's house. d. Whole group: Invite participants to share their examples with the group. e. Note that using a number line or measuring tools like rulers can support the practice of carefully defining quantities. If time allows, discuss why a ruler is placed with 0 at a specific location and is pointed in a specific direction.

		<p style="text-align: center;">Reflect: Content Deepening Focus Question 3</p> <p>How does precision in defining quantities affect our ability to analyze relationships between quantities and understand the world around us?</p>	<p>Display Slide 49. Reflect: Content Deepening Focus Question 3 (4 min)</p> <ol style="list-style-type: none"> a. Review the focus question on the slide. b. Individuals: Ask participants to reflect on the big ideas from the previous investigations regarding precision in defining quantities. Then have them answer the focus question in their notebooks using two or three complete sentences. c. Whole group: Invite a one or two participants to share their answers with the group. d. Highlight these takeaways: <ul style="list-style-type: none"> • Language precision in defining quantities allows for viable comparisons of the quantities involved (e.g., the block-and-ramp experiment was a failure because the quantities weren't precisely or consistently defined). • Language precision in defining quantities requires a rich understanding of the problem scenario and can be used as a tool for analyzing novel situations. • A carefully defined quantity will convey a meaning for all values of the quantity, especially a meaning for zero and positive versus negative values. • Focusing on language precision in defining quantities supports thinking about number lines, a reference point (and a corresponding frame of reference), and measurement.

<p>3:00–3:30 30 min</p> <p>Wrap-Up and Celebration</p> <p>Slides 50–53</p>	<p>Purpose</p> <ul style="list-style-type: none"> • Help participants understand the relationships among the Science Content Storyline Lens strategies and when each strategy occurs in the lesson flow. • Facilitate understanding which SCSL strategies must be addressed in the planning process and which need to be anticipated in planning but occur responsively during the actual teaching of the lesson. • Recognize and celebrate participants' learning so far and anticipate further growth in the coming year. <p>Content</p> <ul style="list-style-type: none"> • Many of the SCSL strategies must be completed during the planning stage. Strategies B, F, G, H, and I are moves the teacher makes while teaching. But planning and anticipating how these strategies will help develop the lesson is critical to success. • The RESPeCT lesson plans provide examples of how strategies B, F, G, H, and I might be used during the lessons. • Strategies F, G, and H should be used throughout the lesson. Strategy B is used at the beginning of a lesson, and strategy I is used at the end. 	<p>Today's Focus Questions</p> <ul style="list-style-type: none"> • How can science content storyline coherence be enhanced by explicitly implementing STeLLA strategy F (Make explicit links between science ideas and activities), strategy G (Link science ideas to other science ideas), and strategy H (Highlight key science ideas and focus question throughout)? • How will the Student Thinking Lens and Science Content Storyline Lens strategies help you teach the Forces lessons in the fall? • How can ideas about forces help us explain the motion of objects? • What is the difference between mass and weight? • How does precision in defining quantities affect our ability to analyze relationships between quantities and understand the world around us? <p>Summarizing Science Content Storyline Lens Strategies</p> <ul style="list-style-type: none"> • What does the organization of the summary chart in the STeLLA strategies booklet highlight about the Science Content Storyline Lens strategies? • Do you want to make any revisions or additions to our poster on effective science teaching? 	<p>Display Slide 50. Today's Focus Questions (5 min)</p> <p>a. Individuals: Give participants a couple of minutes to think about today's focus questions and then answer them in their notebooks.</p> <p>Note: If time is running short, have participants choose one question to answer.</p> <p>b. Whole group: If time allows, have a share-out of ideas.</p> <p>Display Slide 51. Summarizing Science Content Storyline Lens Strategies (10 min)</p> <p>Note: Display one question at a time on the slide.</p> <p>a. "This week we focused on the Science Content Storyline Lens and strategies. Let's synthesize and summarize our learning by looking at the summary chart in your strategies booklet—Summary of the STeLLA Science Content Storyline Lens Strategies."</p> <p>Note: Participants may also refer to their SCSL Z-fold summary charts for this activity.</p> <p>b. Individuals: "Look at this summary chart and how it's organized. What do you think the organization highlights? Write your observations in your notebooks."</p> <p>c. Whole group: "What did you notice about the organization of this chart? What does it highlight about the science content storyline strategies?"</p> <p>d. Reveal the second discussion question on the slide</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
	<p>What Participants Do</p> <ul style="list-style-type: none"> Participants study the SCSL summary chart in the STeLLA strategies booklet to identify key patterns and relationships among the strategies. <p>Posters and Charts</p> <ul style="list-style-type: none"> Effective Science Teaching chart <p>Supplies</p> <ul style="list-style-type: none"> Science notebooks <p>PD Resources</p> <ul style="list-style-type: none"> STeLLA strategies booklet Optional: SCSL Z-fold summary chart (front pocket of PD binder) 	<div style="background-color: #cccccc; height: 20px; margin-bottom: 10px;"></div> <p>Let's Celebrate!</p> <p>Design your own end-of-program celebration and insert any comments or instructions here.</p>	<p>and invite participants to suggest additions or changes to the Effective Science Teaching chart.</p> <p>Key ideas:</p> <ol style="list-style-type: none"> Many of the SCSL strategies must be completed during the lesson planning stage. For example, the main learning goal and activities that match them must be selected ahead of time. Strategies B, F, G, H, and I are moves the teacher makes while teaching the lesson, but planning and anticipating how these strategies will help develop the lesson is critical to success. The RESPeCT lesson plans provide examples of how strategies B, F, G, H, and I might be used during the lessons. Strategies F, G, and H should be applied throughout the lesson. Strategy B is used at the beginning of a lesson, and strategy I is used at the end. Each strategy has its own distinct purpose(s), but all of them contribute to creating a coherent science content storyline. <p>Display Slide 52. Let's Celebrate! (15 min)</p> <p>a. Decide how you'll celebrate the end of the RESPeCT PD program, and modify the slide accordingly. Here are a few ideas:</p> <ul style="list-style-type: none"> Have refreshments and toast the group's success with a bubbly, nonalcoholic drink. Have everyone write on an index card a "golden nugget" that represents something they're taking away from the Summer Institute experience. Pass around a bowl filled with chocolates wrapped in gold paper, and have participants take a piece of chocolate when they drop their cards in the bowl. After the bowl

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>is passed around, share the golden nuggets with the group.</p> <ul style="list-style-type: none"> • Take a group photo.
		 <p>Thank You!</p> <p>Thank you for participating in the RESPeCT PD program!</p>	<p>Display Slide 53. Thank You! (Less than 1 min)</p> <p>a. Before dismissing participants, thank them for participating in the RESPeCT PD program.</p>
