

RESPeCT Summer Institute Professional Development Leader Guide (PDLG)

Grade Level	4	Day	4	STeLLA Strategy	STL Strategy 6: Use and Apply New Science Ideas	Subject Matter Focus	Earth's Changing Surface
Focus Questions				<ul style="list-style-type: none"> • Why is it necessary to engage students in using and applying new science ideas in a variety of ways and contexts? • How will the Student Thinking Lens strategies help you teach the Earth's Changing Surface (ECS) lessons? • How does flowing water change Earth's surface? • How can we use what we've learned about Earth's changing surface to answer the unit central questions? 			
Main Learning Goals				<p>Participants will understand the following:</p> <ul style="list-style-type: none"> • In order to develop meaningful understandings of science ideas, students need multiple opportunities to try using and applying new science ideas in a variety of ways and contexts. • The processes of erosion and deposition change the surface of Earth by carrying weathered earth materials, such as rocks and soil, from one place and depositing them in another place. • Landforms, like mountains and valleys, can be explained using science ideas about plate movement, weathering, and erosion. At any given point in time, Earth's surface is being built up and worn down. 			
Preparation				Materials		Videos	
<p>Daily Setup Tasks</p> <ul style="list-style-type: none"> • Check that video clips are correctly linked to PowerPoint (PPT) slides. • Set up PowerPoint. • Make sure video clips play correctly with good sound. • Arrange furniture and food. • Arrange participant materials. • Put up posters and charts. <p>Planning and Preparation Tasks</p> <ul style="list-style-type: none"> • Study the PDLG, PowerPoint slides (PPTs), video clips, and handouts. Make changes to PPTs if needed. • Review the reflections from day 3 and create a summary slide. • Watch video clips and anticipate participant responses. • Prepare charts for the day's agenda and focus questions. • Review the activities for ECS lessons 6a/b and 7a/b in the lesson plans binder. • Using PPT slide 24 as a model, prepare a 				<p>Posters and Charts</p> <ul style="list-style-type: none"> • STeLLA Framework and Strategies poster • Day-4 Agenda (chart) • Day-4 Focus Questions (chart) • Norms for Working Together (chart) • Strategy charts from days 1–3 (STL strategies 1–5) • Chart of STL strategies highlighted in ECS lesson plans (see PPT slide 24 for model) • Parking Lot poster <p>Handouts in RESPeCT PD Binder Front Pocket</p> <ul style="list-style-type: none"> • Z-fold summary chart: Student Thinking Lens Strategies <p>Handouts in RESPeCT PD Binder, Day 4</p> <ul style="list-style-type: none"> • 4.1 Importance of Engaging Students in Constructing Scientific Explanations (task sheet) • 4.2 Student Work from Zembal-Saul Book <i>What's Your Evidence?</i> • 4.3 Benefits of Engaging Students in Constructing Scientific Explanations • 4.4 Transcript for Video Clip 4.1 • 4.5 Transcript for Video Clip 4.2 		<ul style="list-style-type: none"> • Hershberger video clip, <i>Introducing the CER</i> (on companion DVD for Zembal-Saul book <i>What's Your Evidence?</i>) • Video Clip 4.1: Potter classroom (use and apply); 4.1_stella2-04-potter4-L6_c1-c2 • Video Clip 4.2: Torres classroom (review strategies 1–6); 4.2_stella2-04-torres4-L3_c5 • Video Clip 4.3: Torres classroom (review strategies 1–6); 4.3_stella2-04-torres4-L3_c6 • Video Clip 4.4: Torres classroom (review strategies 1–6); 4.4_stella2-04-torres4-L3_c7 • Video Clip 4.5: Torres classroom (review strategies 1–6); 4.5_stella2-04-torres4-L3_c8

DAY 4 SESSION OUTLINE

Time	Activities	Purpose
8:00–8:15 15 min	Getting Started: Housekeeping, Agenda, Day-3 Reflections, Focus Questions	<ul style="list-style-type: none"> • Build community by sharing participants' reflections from day 3. • Set the stage for a day of learning.
8:15–8:50 35 min	Importance of STL Strategy 5: Constructing Explanations	<ul style="list-style-type: none"> • Develop an appreciation for the multiple ways in which engaging students in constructing scientific explanations can have an impact on student learning within and beyond science.
8:50–9:10 20 min	Introducing Student Thinking Lens (STL) Strategy 6	<ul style="list-style-type: none"> • Develop an initial understanding of the purpose and key features of strategy 6: Engage students in using and applying new science ideas in a variety of ways and contexts.
9:10–10:10 60 min	Lesson Analysis: STL Strategy 6	<ul style="list-style-type: none"> • Use lesson analysis of classroom videos to better understand strategy 6. • Deepen science-content knowledge of Earth's changing surface through lesson analysis.
10:10–10:55 45 min (Includes 10-min break)	Review: STL Strategies 1–6	<ul style="list-style-type: none"> • Review and deepen understandings of key similarities and differences among STL strategies 1–6.
10:55–12:00 65 min	Earth's Changing Surface Lesson Plans Review	<ul style="list-style-type: none"> • Understand why the ECS lesson plans are so scripted and how they should be used before and during the lessons. • Understand the conceptual flow within and across the ECS lessons. • Understand the focus question, main learning goal, and main activity in each lesson. • Understand how STL strategies 1–6 are embedded in the lessons.
12:00–12:45 45 min	LUNCH	
12:45–3:15 150 min (Includes 10-min break)	Content Deepening: Earth's Changing Surface	<ul style="list-style-type: none"> • Deepen participants' science-content knowledge of Earth's changing surface by conducting investigations from ECS lessons 6a/b and 7a/b.
3:15–3:30 15 min	Wrap-Up: Summary, Homework, and Reflections	<ul style="list-style-type: none"> • Summarize and reflect on key ideas from today's learning and preview the transition to the Science Content Storyline Lens (SCSL) strategies.

DAY 4

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process																		
<p>8:00–8:15 15 min</p> <p>Getting Started</p> <p>Slides 1–5</p>	<p>Purpose</p> <ul style="list-style-type: none"> • Build community by sharing participants’ reflections from day 3. • Set the stage for a day of learning. <p>What Participants Do</p> <ul style="list-style-type: none"> • Review the day’s agenda. • Discuss the reflections from day 3. • Read today’s focus questions. <p>Posters and Charts</p> <ul style="list-style-type: none"> • STeLLA Framework and Strategies poster • Day-4 Agenda (chart) • Day-4 Focus Questions (chart) 	<div data-bbox="842 302 1304 695"> </div> <div data-bbox="842 695 1304 1068"> <p>Agenda for Day 4</p> <ul style="list-style-type: none"> • Day-3 reflections • Importance of STL strategy 5: constructing explanations • Introducing Student Thinking Lens strategy 6 • Lesson analysis: STL strategy 6 • Review: STL strategies 1–6 • Earth’s Changing Surface lesson plans review • Lunch • Content deepening: Earth’s Changing Surface • Summary, homework, and reflections </div> <div data-bbox="842 1068 1304 1425"> <p>Trends in Reflections</p> <table border="1"> <thead> <tr> <th data-bbox="873 1141 1094 1162">Lesson Analysis</th> <th data-bbox="1094 1141 1293 1162">Science Content Learning</th> </tr> </thead> <tbody> <tr><td> </td><td> </td></tr> <tr><td> </td><td> </td></tr> <tr><td> </td><td> </td></tr> <tr><td> </td><td> </td></tr> <tr><td> </td><td> </td></tr> <tr><td> </td><td> </td></tr> <tr><td> </td><td> </td></tr> <tr><td> </td><td> </td></tr> </tbody> </table> </div>	Lesson Analysis	Science Content Learning																	<p>Display Slide 1. Lesson Analysis	Science Content Learning																				

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Today's Focus Questions</p> <ol style="list-style-type: none"> 1. Why is it necessary to engage students in using and applying new science ideas in a variety of ways and contexts? 2. How will the Student Thinking Lens strategies help you teach the Earth's Changing Surface (ECS) lessons? 3. How does flowing water change Earth's surface? 4. How can we use what we've learned about Earth's changing surface to answer the unit central questions? 	<p>Display Slide 4. Today's Focus Questions (1 min)</p> <ol style="list-style-type: none"> a. Introduce the focus questions that will guide today's work. b. "Like STeLLA strategies 4 and 5, the goal of strategy 6 is to move student thinking forward toward deeper understandings of science ideas."
	<p>8:15–8:50</p> <p>35 min</p> <p>Importance of STL Strategy 5: Constructing Explanations</p> <p>Purpose</p> <ul style="list-style-type: none"> • Develop an appreciation for the multiple ways in which engaging students in constructing scientific explanations can have an impact on student learning within and beyond science. <p>Content</p> <ul style="list-style-type: none"> • Engaging students in constructing scientific explanations helps them develop meaningful understandings 	<p>The Importance of Engaging Students in Constructing Scientific Explanations</p> <p>Read handout 4.1 and your group-specific handout. Then complete the assigned task:</p> <p>Group 1: Analyze a student explanation (handout 4.2).</p> <p>Group 2: Summarize benefits for students of constructing scientific explanations (handout 4.3).</p> <p>Group 3: Summarize the benefits for teachers of engaging students in constructing scientific explanations (handout 4.3).</p>	<p>Display Slide 5. STeLLA Conceptual Framework (1 min)</p> <ol style="list-style-type: none"> a. Draw participants' attention to the new strategy highlighted on the slide. b. "Strategy 6 is the third STL strategy that is a type of activity designed to move student thinking forward." <p>Display Slide 6. The Importance of Engaging Students in Constructing Scientific Explanations (25 min)</p> <p>Note: If you need some time to catch up on day-3 activities, you can skip this slide. However, this activity is beneficial for reviewing strategy 5 (constructing explanations) and helping participants understand why explanation building is such important work in science and beyond.</p> <p>Timing note: For this segment, allot 5 minutes for</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
Slides 6–7	<p>of science ideas and how scientists work.</p> <p>What Participants Do</p> <ul style="list-style-type: none"> Review jigsaw-strategy readings about the importance of scientific explanations and examine a sample of student work. Share key ideas about constructing scientific explanations. Watch and discuss a lesson video in which the teacher explicitly teaches 3rd graders how to construct explanations that include a claim, evidence, and reasoning that connects to science ideas. <p>Posters and Charts</p> <ul style="list-style-type: none"> STeLLA Framework and Strategies poster Strategy charts from days 1–3 (STL strategies 1–5) <p>Videos</p> <ul style="list-style-type: none"> Hershberger video clip, <i>Introducing the CER</i> <p>Handouts in PD Binder</p> <ul style="list-style-type: none"> 4.1 Importance of Engaging Students in Constructing Scientific Explanations (task sheet) 4.2 Student Work from Zembal-Saul Book <i>What’s Your Evidence?</i> 4.3 Benefits of Engaging Students in Constructing Scientific Explanations <p>PD Resources</p> <ul style="list-style-type: none"> STeLLA strategies booklet 	<p>Slides</p> <p>The CER Framework for Constructing Scientific Explanations</p> <ul style="list-style-type: none"> Next, we’ll watch video clip of a 3rd-grade teacher instructing students how to construct scientific explanations. Think about ideas this clip gives you for helping your students learn to construct scientific explanations by making a claim, supporting it with evidence and reasoning, and considering alternative explanations and strategies (CERA). <p>Link to Introducing the CER video clip.</p>	<p>reading, 10 minutes to prepare for a group share-out, and 10 minutes for the share-out.</p> <ol style="list-style-type: none"> Divide participants into three groups or pairs. Assign each group a number (1, 2, 3). Direct participants to three handouts: <ol style="list-style-type: none"> Importance of Engaging Students in Constructing Scientific Explanations (handout 4.1 in PD program binder) (This handout describes what groups are to do with the following two handouts.) Student Work from Zembal-Saul Book <i>What’s Your Evidence?</i> (handout 4.2 in PD binder) (Group 1’s task is linked to this handout.) Benefits of Engaging Students in Constructing Scientific Explanations (handout 4.3 in PD binder) (Tasks for Groups 2 and 3 are linked to this handout.) After participants have read the designated handouts for their groups and completed their assigned tasks, invite them to share out. <p>Display Slide 7. The CERA Framework for Constructing Scientific Explanations (10 min)</p> <p>Note: This activity is optional but powerful.</p> <ol style="list-style-type: none"> “Let’s watch how one 3rd-grade teacher taught her students to construct scientific explanations. This is the teacher whose student writing Group 1 just read about. The class in this video clip has been studying simple machines (such as pulleys and levers).” “We’re not going to analyze this video clip in terms of STeLLA strategies. Instead, think about ideas this clip gives you as to how you might introduce

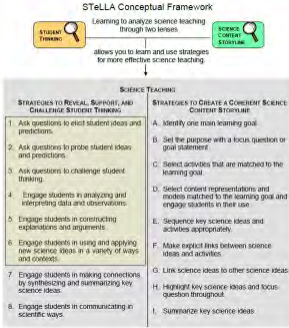

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>your students to the CERA framework for constructing scientific explanations, which involves making a claim, supporting it with evidence and reasoning, and considering alternative explanations and strategies.”</p> <p>c. After watching the clip, discuss participants’ reactions and any ideas it gave them about how they might help their students learn to construct strong scientific explanations.</p> <p>Note: Make sure participants are aware that in addition to using the CERA framework as a tool for teaching students how to develop scientific explanations and arguments (STeLLA strategy 5) in the classroom, they will be using the same framework for videocase-based lesson analysis of their science teaching in RESPeCT study groups throughout the school year.</p>
<p>8:50–9:10</p> <p>20 min</p> <p>Introducing Student Thinking Lens (STL) Strategy 6</p> <p>Slide 8</p>	<p>Purpose</p> <ul style="list-style-type: none"> Develop an initial understanding of the purpose and key features of strategy 6: Engage students in using and applying new science ideas in a variety of ways and contexts. <p>Content</p> <ul style="list-style-type: none"> After students encounter new science ideas, they need opportunities to practice them and see their usefulness in explaining a variety of phenomena. Activities that challenge students to use and apply new ideas give them the time and space to really make sense of the concepts. <p>What Participants Do</p> <ul style="list-style-type: none"> Make and discuss charts 	<p>Introducing STL Strategy 6</p> <p>Engage students in using and applying new science ideas in a variety of ways and contexts.</p> <ol style="list-style-type: none"> What are the purpose and key features of this strategy? Why do you think use-and-apply questions or activities are often shortchanged in science teaching? 	<p>Display Slide 8. Introducing STL Strategy 6 (20 min)</p> <p>a. Small groups (10 min): Divide participants into two groups to make charts highlighting the purpose and key features of strategy 6: Engage students in using and applying new science ideas in a variety of ways and contexts. Encourage participants to refer to the STeLLA strategies booklet and STL Z-fold summary chart for this activity.</p> <p>b. Whole group (10 min): Have groups present their charts in a whole-group share-out and compare them. Ask participants, “What differences and similarities do you notice when you compare your charts with those of other groups?”</p> <p>Key ideas:</p> <ul style="list-style-type: none"> Strategy 6 is a time for “strategic telling” and

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
	<p>highlighting the purpose and key features of strategy 6.</p> <p>Supplies</p> <ul style="list-style-type: none"> • Chart paper and markers <p>PD Resources</p> <ul style="list-style-type: none"> • STeLLA strategies booklet • STL Z-fold summary chart (front pocket of PD binder) 		<p>making sure students are using science ideas accurately.</p> <ul style="list-style-type: none"> • A use-and-apply question or activity is introduced <i>after</i> students have experienced/encountered a new science idea. It provides an opportunity for students to use and apply the idea in a new context or novel way and/or link two or more science ideas together. • A common misconception is that use-and-apply questions or activities assess student learning. Teachers often talk about asking these kinds of questions on tests. However, according to research findings published in <i>How People Learn</i> (National Academy of Sciences, 2000), <i>application</i> is part of the learning process, or developing a conceptual framework. If application is treated like assessment, students may encounter a use-and-apply question on a test without ever having had the opportunity to practice this way of thinking as part of their learning.
<p>9:10–10:10</p> <p>60 min</p> <p>Lesson Analysis: STL Strategy 6</p> <p>Slides 9–14</p>	<p>Purpose</p> <ul style="list-style-type: none"> • Use lesson analysis of classroom videos to better understand strategy 6. • Deepen science-content knowledge of Earth’s changing surface through lesson analysis. <p>Content</p> <ul style="list-style-type: none"> • Strategy 6 involves engaging students in using and applying new science ideas in a variety of ways 	<p>Lesson Analysis: Focus Question 1</p> <p>Why is it necessary to engage students in using and applying new science ideas in a variety of ways and contexts?</p>	<p>Display Slide 9. Lesson Analysis: Focus Question 1 (Less than 1 min)</p> <p>a. Highlight the focus question that will guide the lesson analysis work during this phase.</p>

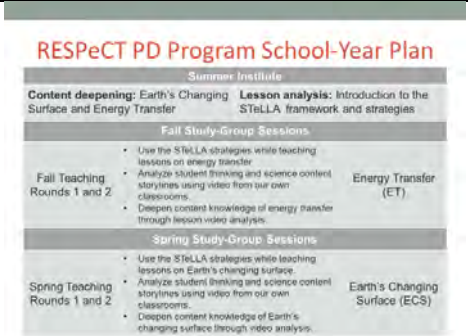

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
	<p>and contexts.</p> <p>What Participants Do</p> <ul style="list-style-type: none"> • Watch a classroom video clip to identify strategy 6 and analyze student thinking that is revealed and challenged from using this strategy. • Check their understandings of strategy 6 by taking a quick multiple-choice quiz. <p>Videos</p> <ul style="list-style-type: none"> • Video Clip 4.1, Potter classroom <p>Handouts in PD Binder</p> <ul style="list-style-type: none"> • 4.4 Transcript for Video Clip 4.1 <p>PD Resources</p> <ul style="list-style-type: none"> • STeLLA strategies booklet <p>Resources in Lesson Plans Binder</p> <p><i>Resources section:</i></p> <ul style="list-style-type: none"> • Content background document 	<p>Lesson Analysis: Review Lesson Context</p> <p>Read the lesson context for this video clip at the top of the transcript (handout 4.4 in your PD program binder).</p> <hr/> <p>Lesson Analysis: Identify Strategy 6</p> <ol style="list-style-type: none"> 1. What makes the activity in this video clip a use-and-apply task? (Focus on task.) 2. What do you notice about the types of questions the teacher asks during the clip? <p style="text-align: center;">Link to video clip 1: 4.1_stella2-04-potter4-L6_c1-c2</p>	<p>Display Slide 10. Lesson Analysis: Review Lesson Context (2 min)</p> <ol style="list-style-type: none"> a. “Read the lesson context at the top of the video transcript (handout 4.4 in your PD program binders).” b. Make sure participants understand the science content and activity that are the focus of this video clip. <p>Note: Refer to the content background document as needed throughout the lesson analysis.</p> <hr/> <p>Display Slide 11. Lesson Analysis: Identify Strategy 6 (25 min)</p> <ol style="list-style-type: none"> a. “As you watch the video, think about what makes the activity in this clip a use-and-apply task. What science ideas should students be using and applying in each scenario? Also notice what kinds of questions the teacher asks.” b. Show the video clip. c. Individuals: “Think about the questions on the slide and mark the transcript as you identify the use of strategy 6.” d. Whole group: Discuss participants’ responses to the questions.

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Lesson Analysis: Analyze Strategy 6 and Reflect</p> <p>Analyze:</p> <ul style="list-style-type: none"> • What student thinking is revealed by engaging students in using and applying new science ideas? By providing a claim, evidence, and reasoning? <p>Reflect:</p> <ul style="list-style-type: none"> • What did you learn about strategy 6 from watching and analyzing this video clip? 	<p>Display Slide 12. Lesson Analysis: Analyze Strategy 6 and Reflect (25 min)</p> <p>a. Individuals: “For the analysis question on the slide, study the video transcript and come up with a claim, evidence, and reasoning to support your claim.”</p> <p>b. Whole-group share-out: As participants share their claims, evidence, and reasoning, encourage them to challenge one another by asking questions, disagreeing, and suggesting improvements or alternative explanations and arguments. (Refer to the norms at the heart of the RESPeCT program.)</p> <p>Note: You may also want to ask participants whether they noticed in the transcript any missed opportunities for engaging students in using and applying new science ideas.</p> <p>c. Reflect (1 min): Give participants time to think about the reflection question on the slide.</p> <p>d. Whole-group discussion: Discuss the reflection question as a group. Make sure participants note specifically what they learned about strategy 6 from watching and analyzing this video clip.</p>
		<p>Check Your Understanding of Strategy 6</p> <p>Jot down your responses to these multiple-choice statements:</p> <ol style="list-style-type: none"> 1. Use-and-apply tasks are used [before/during/after] new science ideas are introduced. 2. For difficult content ideas, students might need to practice applying new ideas in [one/two/many] different contexts. 3. [True/false]: Use-and-apply questions or activities are used primarily for student assessment at the end of a unit. 4. It’s appropriate for teachers to ask [elicit/probe/challenge] questions during a use-and-apply activity. 5. Teachers should [never/judiciously/always] tell students about science ideas they are missing or stating inaccurately. 	<p>Display Slide 13. Check Your Understanding of Strategy 6 (5 min)</p> <p>Note: This activity is optional if time is running short.</p> <p>a. “To check your understanding of STL strategy 6, jot down your responses to this multiple-choice quiz.”</p> <p>b. Have participants discuss their answers either in</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>pairs or as a group. (If time is short, just read the answers aloud.)</p> <p>Answer key:</p> <ol style="list-style-type: none"> 1. After 2. Many 3. False 4. Challenge (and probe) 5. Judiciously (defined as “good or discriminating judgment; wise, sensible, or well advised”)
		<p>Reflect: Lesson Analysis Focus Question 1</p> <p>Why is it necessary to engage students in using and applying new science ideas in a variety of ways and contexts?</p>	<p>Display Slide 14. Reflect: Lesson Analysis Focus Question 1 (3 min)</p> <ol style="list-style-type: none"> a. Individuals (1 min): “Think for a moment about how you would answer the focus question on this slide.” b. Whole-group share-out (2 min): Have a few participants share their ideas.

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
<p>10:10–10:55</p> <p>45 min</p> <p>(Includes 10-min break)</p> <p>Review: STL Strategies 1–6</p>	<p>Purpose</p> <ul style="list-style-type: none"> Review and deepen understandings of key similarities and differences among STL strategies 1–6. <p>Content</p> <ul style="list-style-type: none"> STL strategies 1–6 reveal, support, and challenge student thinking. <p>What Participants Do</p> <ul style="list-style-type: none"> Study the Summary of STeLLA Student Thinking Lens Strategies chart in the STeLLA strategies booklet. Discuss patterns, similarities, and differences among STL strategies 1–6. Watch a classroom video clip and identify any STL strategies used during the lesson. Discuss observations and missed opportunities. <p>Posters and Charts</p> <ul style="list-style-type: none"> Strategy charts from days 1–3 (STL strategies 1–5) <p>Videos</p> <ul style="list-style-type: none"> Video Clip 4.2, Torres classroom Video Clip 4.3, Torres classroom Video Clip 4.4, Torres classroom Video Clip 4.5, Torres classroom <p>Handouts in PD Binder</p> <ul style="list-style-type: none"> 4.5 Transcript for Video Clip 4.2 4.6 Transcript for Video Clip 4.3 4.7 Transcript for Video Clip 4.4 4.8 Transcript for Video Clip 4.5 	<p>Lesson Analysis: Focus Question 2</p> <p>How will the Student Thinking Lens strategies help you teach the Earth’s Changing Surface (ECS) lessons?</p>	<p>Display Slide 15. Lesson Analysis: Focus Question 2 (Less than 1 min)</p> <p>Transition: “Now we’ll shift our attention to the second lesson analysis focus question and spend some time summarizing what we’ve learned so far about Student Thinking Lens strategies 1–6. Then we’ll review the ECS lesson plans and highlight how these strategies are used in the lessons you’ll start teaching in January.”</p>
<p>Slides 15–19</p>		 <p>The diagram is titled "STeLLA Conceptual Framework" and is divided into two main sections: "STUDENT THINKING" and "SCIENCE TEACHER".</p> <p>STUDENT THINKING: Learning to analyze science teaching through two lenses. It includes a box for "STUDENT THINKING" with a magnifying glass icon and a box for "SCIENCE TEACHER" with a magnifying glass icon. Below this, it states "allows you to learn and use strategies for more effective science teaching".</p> <p>SCIENCE TEACHER: Strategies to create a coherent science content structure. It lists eight strategies:</p> <ol style="list-style-type: none"> 1. Ask questions to elicit student ideas and predictions. 2. Ask questions to probe student ideas and predictions. 3. Ask questions to challenge student thinking. 4. Engage students in analyzing and interpreting data and observations. 5. Engage students in constructing explanations and arguments. 6. Engage students in using and applying new science ideas in a variety of ways and contexts. 7. Engage students in making connections by synthesizing and formalizing key science ideas. 8. Engage students in communicating in scientific ways. <p>STUDENT THINKING: Strategies to reveal, support, and challenge student thinking. It lists eight strategies:</p> <ol style="list-style-type: none"> 1. Ask questions to elicit student ideas and predictions. 2. Ask questions to probe student ideas and predictions. 3. Ask questions to challenge student thinking. 4. Engage students in analyzing and interpreting data and observations. 5. Engage students in constructing explanations and arguments. 6. Engage students in using and applying new science ideas in a variety of ways and contexts. 7. Engage students in making connections by synthesizing and formalizing key science ideas. 8. Engage students in communicating in scientific ways. 	<p>Display Slide 16. <p>Surface</p> <p>Slides 25–62</p>	<p>time.</p> <ul style="list-style-type: none"> Stream scientists use stream-table models to investigate how flowing water changes Earth’s surface A watershed is a natural system that transports rainwater runoff and eroded sediment from one location to another. Most rivers begin in a mountainous headwaters area of a watershed and flow downward into a valley that leads to a drainage outlet at an ocean, a lake, or another bigger river. Rivers erode their beds by either removing sediment grains that have accumulated on the bed or by cutting directly into the hard bedrock beneath the sediment. Water depth and channel steepness determine the speed at which the water flows. So flow velocity is also related to a river’s ability to erode its bed. More water and/or a steeper streambed increase erosion. Rivers are dynamic systems that respond to changing conditions within the watershed. As plate tectonics build up Earth’s surface and erosion wears it down, rivers respond by adjusting their profile to achieve a balance between opposing forces. <p>What Participants Do</p> <ul style="list-style-type: none"> Explore and discuss key science ideas behind ECS lessons. 		<p>Display Slide 26. 	<p>Resources in Lesson Plans Binder</p> <p><i>Resources section:</i></p> <ul style="list-style-type: none"> • Content background document • Common Student Ideas 	<p>Investigation 1: Stream-Table Model</p> <p>Observe the stream-table model and look for examples of these processes:</p> <ul style="list-style-type: none"> • Erosion—when flowing water moves earth materials from one location to a new location • Deposition—when earth materials are left behind or deposited in a new location <p>Question: Where would you place the erosion and deposition cards to indicate where each process is occurring in the model?</p>	<p>Display Slide 31. Investigation 1: Stream-Table Model (20 min)</p> <ol style="list-style-type: none"> “Today we’ll become stream scientists and use this stream-table model to investigate how flowing water changes Earth’s surface.” Read the instructions and the question on the slide. Begin the investigation by slowly opening the valve on the water jug. (Be sure to loosen the cap on top to allow for proper airflow.) Adjust the valve so the water flow isn’t too strong but is adequate to erode the sand, form a stream channel, and deposit sand at the bottom of the tray. Pairs: Direct pairs to look for examples of erosion and deposition taking place in the model and discuss where they would place the erosion and deposition cards to indicate where each process is occurring. Whole-group discussion: Following the investigation, invite pairs to share with the group their observations and answers to the question on the slide. Probe participants’ responses and elicit differing points of view. During the discussion, record key ideas and observations on chart paper.

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>Display Slide 32. River Erosion and Deposition (Less than 1 min)</p> <ul style="list-style-type: none"> a. “Let’s review some key science ideas about erosion and deposition.” b. “This slide shows the Colorado River flowing through the Grand Canyon. It’s a familiar example of a river eroding its bed and cutting a canyon through hard rock. The flowing water erodes the rock and carries sediment away to be deposited somewhere else downstream, such as behind a dam or in the Colorado River delta at the Gulf of California.”
			<p>Display Slide 33. Watersheds (3 min)</p> <ul style="list-style-type: none"> a. “To understand river erosion and deposition, we must first understand the concept of a watershed, sometimes called a <i>drainage basin</i>.” b. “A <i>watershed</i> is an area of Earth’s surface drained by a particular river. <i>Drainage divides</i>, like those on the slide, are boundaries that separate a watershed from neighboring watersheds. These divides are high points, like ridgelines, that surround a watershed.” c. “<i>Headwaters</i> mark the upper end of a watershed, and the lower end is called a <i>drainage outlet</i> or <i>base level</i>. The outlet is the lowest elevation point in the watershed where the main river or stream flows out of the basin.” d. “The main river or stream in the watershed is called the <i>trunk river</i> or <i>trunk stream</i>. Smaller streams or rivers that feed into the trunk stream are called <i>tributaries</i>. Together, a trunk stream and

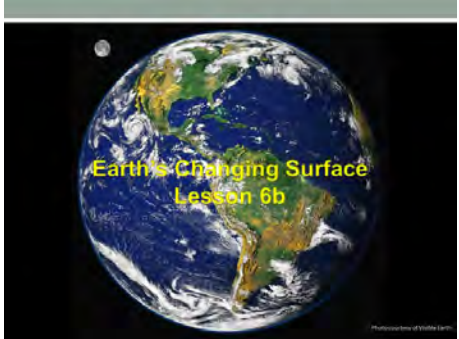

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>its tributaries make up a <i>stream channel network</i> that funnels rain runoff and sediment from the landscape into the trunk stream.”</p> <p>e. “<i>Hill slopes</i> are located between stream channels. In this area of land, precipitation either infiltrates or soaks into the ground or flows downhill into a stream channel as runoff.”</p> <p>f. “A watershed is a natural system that transports rainwater runoff and eroded sediment into the trunk stream and out of the basin at the drainage outlet for deposition elsewhere.”</p>
			<p>Display Slide 34. River Longitudinal Profile (1 min)</p> <p>a. “This slide shows a longitudinal profile of a river.”</p> <p>b. “Natural rivers typically develop a profile along their length that curves upward like a dish. This is called a <i>concave-up longitudinal profile</i> because the concavity in the curve faces upward. This curve is steepest at its upper end near the headwaters and flattest at its lower end near the drainage outlet.”</p> <p>c. “This concave shape forms because of the interaction between gravity and the mass of flowing water and sediment. It reflects the fact that the small headwater tributaries carry less water and sediment and thus require a steeper slope to move that small mass downhill. On the other hand, a large trunk stream carries much more water and sediment in the lower basin and thus only requires a gentle slope to move that greater mass downhill toward the outlet.”</p>

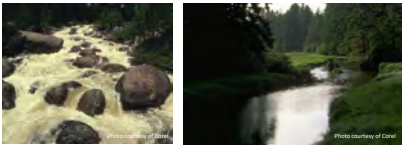

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>Display Slide 35. Types of River Channels (1 min)</p> <ol style="list-style-type: none"> “Most rivers begin their journey in the mountainous headwaters area of a watershed and flow downward into a valley that leads to a drainage outlet at an ocean, a lake, or another bigger river.” “As rivers erode their profile, they may either cut their beds downward into hard rock or build their beds upward by depositing sediment. This results in two different types of river channels: a <i>bedrock channel</i>, where a river cuts a canyon in the hard rock of a mountain, or an <i>alluvial channel</i>, where a river builds up its bed by depositing sediment across a floodplain.”
			<p>Display Slide 36. Types of Sediment Load (3 min)</p> <ol style="list-style-type: none"> “This slide shows various types of sediment load.” “River channels carry both water and sediment. The sediment consists of broken particles of weathered rock that have eroded from the surface of the watershed. Fast-flowing river water carries the sediment down a channel and deposits it in another location where the water flow is slower.” “The <i>sediment load</i> of a river is defined as ‘the volume or mass of material a river transports in a given amount of time.’” “There are three different types of sediment load in a river: (1) suspended load, (2) bed load, and (3) dissolved load.” “A <i>suspended load</i> consists of small grains that are carried aloft by turbulence in the flowing water. These small silt or sand grains turn river water

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>brown during a flood.”</p> <p>f. “A <i>bed load</i> consists of larger, heavier grains that roll, slide, or bounce along the bed as the flowing water carries them along. These are the pebbles and boulders we see on the bottom of a streambed when it’s dry.”</p> <p>g. “A <i>dissolved load</i> consists of ions that dissolve in the flowing water. The chemical weathering of rocks and minerals upstream produce these ions.”</p> <p>h. “The physical particles of rock in suspended and bed loads are visible, but the chemical ions of a dissolved load are part of the flowing water and can’t be seen with the naked eye.”</p>
			<p>Display Slide 37. Stream-Channel Erosion: Part 1 (2 min)</p> <p>a. “The equation on this slide illustrates stream-channel erosion.”</p> <p>b. “Rivers erode their beds by either removing sediment grains that have accumulated on the bed or by cutting directly into the hard bedrock beneath the sediment. Both of these processes require sufficient sideways force or <i>shear stress</i> exerted by the column of flowing water. This <i>bed shear stress</i> is proportional to the water depth, or <i>mass</i>, and the steepness, or <i>slope</i>, of the stream channel.”</p> <p>c. “With greater water flow, water depth increases, which means that more mass is pressing down on the streambed. With a steeper stream channel, more of that mass is directed downhill, increasing the sideways force or shear stress on the streambed. So more water and/or a steeper streambed increase erosion.”</p> <p>d. “We’ll test these ideas later using a stream-table</p>

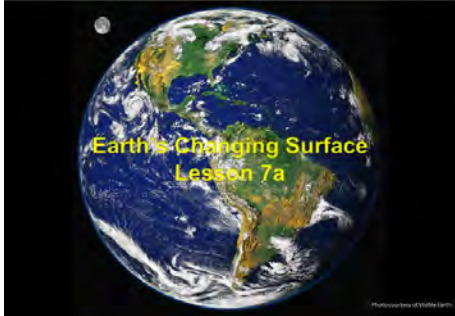

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>model. This type of model can show us how increasing or decreasing water flow and/or changing the tilt of the stream table affect erosion and deposition.”</p> <p>Display Slide 38. Stream-Channel Erosion: Part 2 (2 min)</p> <ol style="list-style-type: none"> “Water depth and channel steepness determine the speed at which river water flows. So flow velocity is also related to a river’s ability to erode its bed.” “The graph on this slide plots water velocity compared against the size of sediment grains that can be lifted off the bed.” “On the left side of the graph, faster water flow, with deeper water and a steeper channel, is required to move large sediment grains like cobbles and boulders. In the middle, smaller grains, such as grains of sand, can be moved with slower velocities of water, shallower water, and a gentler slope. But on the right side, faster velocities of water are required to move the smallest grains of silt and clay because those grains are sticky or cohesive.” “So it’s hardest for a stream to erode big boulders and sticky clay from its bed, and it’s easiest to move small, loose grains of sand.”

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>Display Slide 39. Dynamic Equilibrium and the Graded River (2 min)</p> <p>a. “To better understand river erosion and deposition, we need to understand the important concept of <i>dynamic equilibrium</i>.”</p> <p>b. “According to this concept, rivers are dynamic systems that respond to changing conditions within the watershed. As plate tectonics build up Earth’s surface and erosion wears it down, rivers respond by adjusting their profile to achieve a balance between opposing forces. If any characteristic of a river changes, such as its channel shape or the flow of water and sediment, other characteristics will adjust to achieve a new balance or equilibrium. The dish-shaped profile we discussed earlier is an expression of dynamic equilibrium.”</p> <p>c. “Geomorphologists refer to this balanced form as a <i>graded river profile</i>. A graded river is a river in equilibrium or balance with the prevailing conditions in the watershed.”</p>
			<p>Display Slide 40. Lane’s Balance Equation (1 min)</p> <p>a. “Four basic parameters control river equilibrium: (1) sediment load (L), (2) average sediment grain size (D_{50}), (3) channel slope (S), and (4) water flow or discharge (Q).”</p> <p>b. “The equation on the slide, called <i>Lane’s balance</i>, is a mathematical relationship that expresses this equilibrium. $L \times D_{50}$ is proportional to $S \times Q$.”</p> <p>c. “If any of these four parameters is altered, the other three will adjust to achieve a new balance or equilibrium.”</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>Display Slide 41. Graded River Profile (1 min)</p> <p>a. “This photo of Death Valley, California, is an excellent example of a graded stream. The stream channel follows a concave-up graded profile from its head on the mountainside to its base on the alluvial fan.”</p> <p>b. “Scarps, or steep slopes, are visible at the base of the hill, and with repeated earthquakes on the mountain-front fault, the mountain block rises and the valley bottom drops down. To maintain an equilibrium-graded profile, the stream erodes its bed upstream, cutting a deeper canyon into the rock, and deposits sediment downstream, building up its bed on the alluvial fan.”</p> <p>c. “Think about how this relates to your observations during our stream-table investigation.”</p>
			<p>Display Slide 42. Earth's Changing Surface: Lesson 6b (Less than 1 min)</p> <p>a. “Next, we’ll explore science ideas about Earth’s changing surface from lesson 6b.”</p>

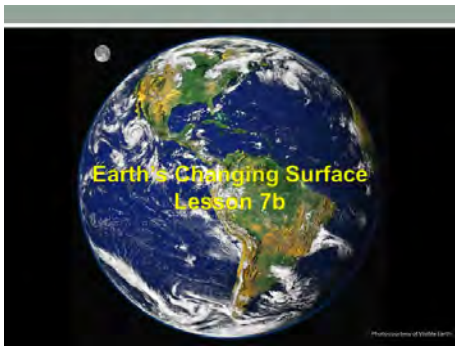

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Content Deepening: Focus Question 1</p> <p>How does flowing water change Earth's surface?</p>	<p>Display Slide 43. Content Deepening: Focus Question 1 (Less than 1 min)</p> <ol style="list-style-type: none"> Review the focus question on the slide. Emphasize that this question from ECS lesson 6a will guide student learning throughout lesson 6b as well.
		<p>Investigation 2: Stream Tables and Real Streams</p> 	<p>Display Slide 44. Investigation 2: Stream Tables and Real Streams (5 min)</p> <ol style="list-style-type: none"> Pairs: "Examine these two photographs of a stream-table model juxtaposed with a real stream and discuss with an elbow partner how the model compares with a real stream. See if you can come up with three similarities and three differences. Then write your ideas in your science notebooks."
		<p>Investigation 2: Stream Tables and Real Streams</p> <ol style="list-style-type: none"> How is the stream-table model like a real stream? How is the model different from a real stream? Where do you think erosion and deposition happen in the streams below? 	<p>Display Slide 45. Investigation 2: Stream Tables and Real Streams (10 min)</p> <ol style="list-style-type: none"> Read the first two questions on the slide. Call on pairs to share their ideas for answering these questions, citing the similarities and differences they recorded in their notebooks to support their answers. Probe participants' responses and elicit differing points of view. Then read the third question on the slide and invite

		<p style="text-align: center;">Reflect: Content Deepening Focus Questions</p> <p>Focus question from lesson 5: <i>Can mountains grow so tall they reach outer space? Why or why not?</i></p> <p>Focus question from lesson 6: <i>How does flowing water change Earth's surface?</i></p>	<p>several participants to share their ideas. Probe and challenge their responses.</p> <p>Display Slide 46. Reflect: Content Deepening Focus Questions (10 min)</p> <p>a. “As we reflect on the content deepening focus question from ECS lesson 6, let’s revisit the focus question from lesson 5 as well. Think about how today’s investigations answer both questions.”</p> <p>b. Review the focus questions on the slide.</p> <p>c. “To answer these questions, make a claim and support it with evidence and reasoning from today’s investigations.”</p> <p>d. “As others share their claims, listen carefully and be ready to agree, disagree, ask questions, or add on. Make sure to support your arguments using evidence and reasoning from today’s investigations.”</p> <p>e. During this discussion, record key ideas on chart paper.</p>
		<p style="text-align: center;"> Key Science Ideas</p> <p>Lesson 5: Can mountains grow so tall they reach outer space? Why or why not?</p> <ul style="list-style-type: none"> • Mountains can’t grow so tall they reach outer space, because the process of weathering wears them down. • Physical and chemical weathering break rocks into smaller pieces that can erode. <p>Lesson 6: How does flowing water change Earth’s surface?</p> <ul style="list-style-type: none"> • Flowing water changes Earth’s surface by eroding rocks and depositing them in other places as sediment. • Weathering prepares rocks for erosion by breaking them into smaller pieces. • Together, weathering and erosion wear down the land. 	<p>Display Slide 47. Key Science Ideas (5 min)</p> <p>a. Review the key science ideas on the slide that answer the focus questions from ECS lessons 5 and 6. Emphasize that participants’ observations and evidence from today’s investigations helped shape these responses.</p> <p>b. Whole-group discussion: “Does everyone agree with these ideas? Would you like to add or revise anything?”</p> <p>c. Ask participants to copy these ideas into their science notebooks under the focus questions for</p>

			lessons 5 and 6.
			<p>Display Slide 48. Earth's Changing Surface: Lesson 7a (Less than 1 min)</p> <p>a. "Now we'll explore science ideas about Earth's changing surface from lesson 7a."</p>
		<p>Content Deepening: Focus Question 2</p> <p>How can we use what we've learned about Earth's changing surface to answer the unit central questions?</p>	<p>Display Slide 49. Content Deepening: Focus Question 2 (Less than 1 min)</p> <p>a. Read the focus question on the slide.</p> <p>b. "This question will guide student learning throughout ECS lesson 7a."</p> <p>c. Have participants write this question in their science notebooks and draw a box around it.</p>
<p>Unit Central Questions</p> <p>Why isn't all of Earth's surface flat? What causes the surface to look different in different places?</p>	<p>Display Slide 50. Unit Central Questions (Less than 1 min)</p> <p>a. Review the unit central questions on the slide and remind participants that these questions will guide student learning throughout the entire series of ECS lessons.</p> <p>b. Explain that the purpose of lesson 7 is for students to summarize what they've learned about Earth's changing surface throughout the unit and develop</p>		

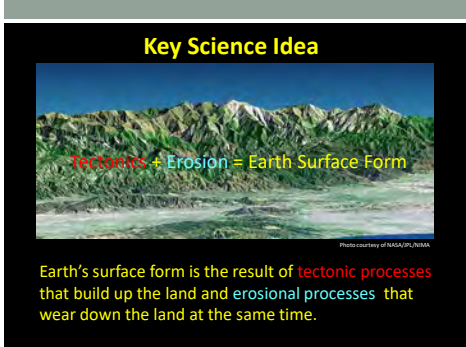

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>answers for these questions.</p> <p>Display Slide 51. Investigation 3: Building Up and Wearing Down Earth's Surface (Less than 1 min)</p> <p>a. "For our next investigation, you'll work with your partner to answer a series of questions about the processes that build up and wear down Earth's surface."</p>
		<p>Investigation 3: Building Up and Wearing Down Earth's Surface</p> <ol style="list-style-type: none"> 1. What processes are involved in forming mountains? 2. Do plate collisions build up or wear down Earth's surface? Why do you think so? 3. Do volcanic eruptions build up or wear down Earth's surface? Why do you think so? 	<p>Display Slide 52. Investigation 3: Building Up and Wearing Down Earth's Surface (10 min)</p> <p>a. Have participants pair up with their elbow partners.</p> <p>b. "The questions on this slide focus on the processes involved in building up Earth's surface."</p> <p>c. Pairs: "Discuss these questions with your partners and write your answers in your science notebooks."</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Investigation 3: Building Up and Wearing Down Earth's Surface</p> <ol style="list-style-type: none"> 1. What is the difference between these processes? <ul style="list-style-type: none"> • Weathering and erosion • Erosion and deposition 2. Does weathering build up or wear down Earth's surface? Why do you think so? 3. Does erosion build up or wear down Earth's surface? Why do you think so? 4. Does deposition build up or wear down Earth's surface? Why do you think so? 	<p>Display Slide 53. Investigation 3: Building Up and Wearing Down Earth's Surface (10 min)</p> <ol style="list-style-type: none"> a. "The questions on this slide relate to weathering, erosion, and deposition. Think about whether these processes are involved in building up or wearing down Earth's surface." b. Pairs: "Discuss these questions with your partners and write your answers in your science notebooks."
		<p>Investigation 3: Building Up and Wearing Down Earth's Surface</p> <ol style="list-style-type: none"> 1. As each of the 11 scenarios on the handout is read aloud, decide whether the scenario builds up or wears away Earth's surface. 2. Use an X to mark the box on the handout that reflects your answer. 3. Next, decide what process caused the scenario and write your answer in the third column on the handout. 4. Be prepared to share your answers and reasoning! 	<p>Display Slide 54. Investigation 3: Building Up and Wearing Down Earth's Surface (15 min)</p> <ol style="list-style-type: none"> a. Distribute handout 4.11 (Building Up and Wearing Down Earth's Surface). b. Inform participants that they'll work independently on this activity. c. Walk participants through the instructions on the slide and ask if they have any questions. d. Read the scenarios on the handout one at a time. Give participants about 30 seconds to think about their answers and record them on the handout. e. Whole group: Read through each scenario again and direct participants to indicate their answers to the following questions with a show of hands: <ul style="list-style-type: none"> • "How many think this is an example of building up Earth's surface?" • "How many think this is an example of wearing down Earth's surface?" • "What is the cause of each scenario? What process is involved?"

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			f. Record participants' answers on chart paper and reach a consensus on each scenario.
			<p>Display Slide 55. Earth's Changing Surface: Lesson 7b (Less than 1 min)</p> <p>a. "For our final investigation, we'll explore ideas about Earth's changing surface from lesson 7b."</p>
		<p>Content Deepening: Focus Question 2</p> <p>How can we use what we've learned about Earth's changing surface to answer the unit central questions?</p>	<p>Display Slide 56. Content Deepening: Focus Question 2 (Less than 1 min)</p> <p>a. Review the focus question on the slide.</p> <p>b. Emphasize that this question from ECS lesson 7a will guide student learning throughout lesson 7b as well.</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Unit Central Questions</p> <p>Why isn't all of Earth's surface flat? What causes the surface to look different in different places?</p>	<p>Display Slide 57. Unit Central Questions (Less than 1 min)</p> <p>a. Review the unit central questions on the slide.</p>
		<p>Investigation 4: Use and Apply</p> <p>San Gabriel Mountains Southern California</p>  <p>Do you think the San Gabriel Mountains are being built up and growing higher or are wearing away and getting lower?</p>	<p>Display Slide 58. Investigation 4: Use and Apply (1 min)</p> <p>a. Have participants pair up with their elbow partners again.</p> <p>b. "The image on this slide is a digital topographic model of the San Gabriel Mountains that rise above Pomona."</p> <p>c. "This investigation will focus on the processes that shape these mountains."</p> <p>d. Ask participants to think about the question on the slide.</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Investigation 4: Use and Apply</p> <ul style="list-style-type: none"> • How do you think the San Gabriel Mountains near Pomona, California, were formed? • What evidence can you find on the maps from ECS lesson 4 to support your answer? • Do you think the San Gabriel Mountains today are being built up and growing higher or wearing away and getting lower? • What evidence can you find on the maps to support your answer? 	<p>Display Slide 59. Investigation 4: Use and Apply (15 min)</p> <ol style="list-style-type: none"> Have participants locate ECS handouts 4.1 (Map of Plate Boundaries around the World) and 4.2 (Physical Map of the World) in their lesson plans binders. Read the questions on the slide. Pairs: “Discuss your ideas for answering these questions with your partners. Then write your answers in your science notebooks.” Whole group: Invite pairs to share their ideas and evidence with the group. Probe participants’ responses and elicit differing points of view.
		<p>Investigation 4: Use and Apply</p> <p>Using the relief map of the United States and the plate-boundaries map, work with your partner to complete these sentences:</p> <ol style="list-style-type: none"> The San Gabriel Mountains were formed by _____. My evidence is _____. The San Gabriel Mountains are [<i>building up/wearing down</i>]. My evidence is _____. <p>Write your answers in your science notebook and include drawings to support your ideas.</p>	<p>Display Slide 60. Investigation 4: Use and Apply (15 min)</p> <ol style="list-style-type: none"> Distribute a plastic relief map of the United States (from ECS lesson 1a) to each pair of participants. Inform participants that they’ll also need handout 4.1 (Map of Plate Boundaries around the World) for this investigation. Read through the instructions and statements on the slide. Pairs: “Work with your partners to develop answers for each statement. Then record your responses in your science notebooks and include drawings to support your ideas.”
