

RESPeCT Summer Institute Professional Development Leader Guide (PDLG)

Grade Level	4	Day	5	STeLLA Strategy	Science Content Storyline Lens (SCSL) Strategy A: Identify One Main Learning Goal	Subject Matter Focus	Energy Transfer
Focus Questions	<ul style="list-style-type: none"> • What is the Science Content Storyline Lens (SCSL)? • Why is one main learning goal essential for science content storyline coherence? • How do we know whether something has energy? • What causes a moving object to have more or less motion energy? 						
Main Learning Goals	<p>Participants will understand the following:</p> <ul style="list-style-type: none"> • Research from the TIMSS Video Study of Science Teaching emphasizes the importance of creating science content storylines that support students in making links between classroom activities and science ideas. • The SCS Lens and strategies empower teachers to think in new ways about planning and teaching science lessons. • Identifying and focusing on one main learning goal in a lesson is an important strategy for creating a coherent science content storyline. • Energy can change, or transform, from one form to another form. • Energy is all around us and can be detected using our senses. Seeing objects move, hearing a sound, feeling heat, and seeing light are all ways of detecting energy. • When an object moves faster, it has more energy. • Heat is a special end form of energy. Heat energy is conserved but is a less useful form. 						
Preparation			Materials			Videos	
<p>Daily Setup Tasks</p> <ul style="list-style-type: none"> • Check that video clips are correctly linked to PowerPoint (PPT) slides. • Set up PowerPoint. • Make sure video clips play correctly with good sound. • Arrange furniture and food. • Arrange participant materials. • Put up posters and charts. <p>Planning and Preparation Tasks</p> <ul style="list-style-type: none"> • Study the PDLG, PowerPoint slides (PPTs), video clips, and handouts. Make changes to PPTs if needed. • Review the reflections from day 4 and create a summary slide. • Watch video clips and anticipate participant 			<p>Posters and Charts</p> <ul style="list-style-type: none"> • STeLLA Framework and Strategies poster • Day-5 Agenda (chart) • Norms for Working Together (chart) • Day-5 Focus Questions (chart) • Effective Science Teaching chart (from day 1) • Strategy charts from days 1–4 (STL strategies 1–6) • Parking Lot poster <p>Handouts in RESPeCT PD Binder Front Pocket</p> <ul style="list-style-type: none"> • Z-fold summary chart: Science Content Storyline Lens Strategies (blank) <p>Handouts in RESPeCT PD Binder, Day 5</p> <ul style="list-style-type: none"> • 5.1 Analysis Guide A: Identifying One Main 			<ul style="list-style-type: none"> • Video clips from one Energy Transfer lesson: <ul style="list-style-type: none"> • <u>Video Clip 5.1</u>: Bernstein classroom (beginning of lesson); 5.1_stella_et_bernstein_L2_c1 • <u>Video Clip 5.2</u>: Bernstein classroom (during lesson); 5.2_stella_et_bernstein_L2_c2 • <u>Video Clip 5.3</u>: Bernstein classroom (end of lesson); 5.3_stella_et_bernstein_L2_c3 	

<p>responses.</p> <ul style="list-style-type: none"> • Prepare charts for the day’s agenda and focus questions. • Review the activities for ET lessons 1b and 2a/b in the lesson plans binder. (Note: For this session, handout 5.7 (Ramps, Speed, and Energy from ET lesson 2a) will be completed in one investigation. In lesson 2, students completed part of the handout in lesson 2a and the rest in lesson 2b.) • Content deepening: <ul style="list-style-type: none"> • For the marble-and-ramp investigation, Carve out a groove in the block of Styrofoam so the marble will nest in the groove when it rolls off the ramp. The marble should push the Styrofoam across the table until both come to a stop. Making the groove in the Styrofoam will produce more consistent results. 	<p>Learning Goal (2 copies)</p> <ul style="list-style-type: none"> • 5.2 Practice Identifying One Main Learning Goal • 5.3 Transcript for Video Clip 5.1 • 5.4 Transcript for Video Clip 5.2 • 5.5 Transcript for Video Clip 5.3 • 5.6 Forms of Energy • 5.7 Ramps, Speed, and Energy (from ET lesson 2a) • 5.8 Extended Homework: RESPeCT Lesson Plan Analysis • 5.9 Daily Reflections—Day 5 <p>Handouts in RESPeCT Lesson Plans Binder</p> <ul style="list-style-type: none"> • 2.2 High-Speed Energy Procedure (from ET lesson 2a) • 4.1 Map of Plate Boundaries around the World (from ECS lesson 4a) <p>PD Leader Masters, Days 5–8</p> <ul style="list-style-type: none"> • PD Leader Master: Practice Identifying One Main Learning Goal (Answer Key) <p>Supplies</p> <ul style="list-style-type: none"> • Science notebooks • Chart paper and markers • Plastic relief map of the United States (1 per group) (from ECS lesson 1a) • For energy-detectives investigation (1 per pair): <ul style="list-style-type: none"> • Plastic bag containing windup toy, flashlight, and noisemaker • For ramp-and-marble investigation (1 setup per pair): <ul style="list-style-type: none"> • 1 ruler (with a groove down the middle) • 1 marble • 1/2-inch blocks of wood or notepads (to elevate the ramps) • Small block of Styrofoam (with groove cut out) • 2 sheets of plain white paper • Tape

DAY 5 SESSION OUTLINE

Time	Activities	Purpose
8:00–8:25 25 min	Getting Started: Housekeeping, Agenda, Day-4 Reflections, Norms, Focus Questions	<ul style="list-style-type: none"> • Build community by sharing participants' reflections from day 4. • Set the stage for a day of learning.
8:25–8:40 15 min	Review of Strategy 6: Use and Apply	<ul style="list-style-type: none"> • Review STL strategy 6 (use and apply) and deepen participants' understandings of this strategy and the Earth's Changing Surface lesson content.
8:40–8:55 15 min	What Is the Science Content Storyline Lens (SCSL)?	<ul style="list-style-type: none"> • Help participants develop strong initial understandings of the Science Content Storyline Lens.
8:55–10:10 75 min (Includes 10-min break)	Introducing SCSL Strategy A	<ul style="list-style-type: none"> • Clarify and deepen participants' understandings of SCSL strategy A: Identify one main learning goal. • Clarify the distinctions between science ideas, student ideas, and main learning goals.
10:10–12:00 110 min	Lesson Analysis: SCSL Strategy A	<ul style="list-style-type: none"> • Use lesson analysis of classroom videos to better understand SCSL strategy A. • Deepen participants' science-content knowledge of energy transfer through lesson analysis.
12:00–12:45 45 min	LUNCH	
12:45–3:15 150 min (Includes 10-min break)	Content Deepening: Energy Transfer	<ul style="list-style-type: none"> • Reflect on previous learning or teaching experience related to energy. • Deepen participants' science-content knowledge of energy transfer by conducting investigations from ET lessons 1b and 2a/b.
3:15–3:30 15 min	Wrap-Up: Summary, Homework, and Reflections	<ul style="list-style-type: none"> • Summarize and reflect on key ideas from today's learning, including the Science Content Storyline Lens, STeLLA strategy A, and the Energy Transfer science content.

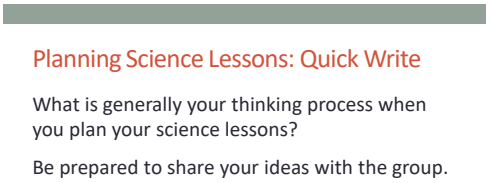

DAY 5

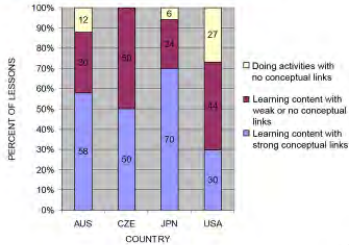

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
<p>8:00–8:25 25 min</p> <p>Getting Started</p> <p>Slides 1–8</p>	<p>Purpose</p> <ul style="list-style-type: none"> • Build community by sharing participants' reflections from day 4. • Set the stage for a day of learning. <p>What Participants Do</p> <ul style="list-style-type: none"> • Review the day's agenda. • Discuss the reflections from day 4. • Review and discuss progress on the RESPeCT program norms. • Read the focus questions for day 5. <p>Posters and Charts</p> <ul style="list-style-type: none"> • STeLLA Framework and Strategies poster • Day-5 Agenda (chart) • Norms for Working Together (chart) • Day-5 Focus Questions (chart) 	 <p>Agenda for Day 5</p> <ul style="list-style-type: none"> • Day-4 reflections • Focus questions • Review strategy 6: use and apply • What Is the Science Content Storyline Lens? • Introducing SCSL strategy A • Lesson analysis: SCSL strategy A • Lunch • Content deepening: energy transfer • Summary, homework, and reflections 	<p>Display Slide 1. RESPeCT PD Program (5 min)</p> <p>a. Take care of any housekeeping issues.</p> <hr/> <p>Display Slide 2. Agenda for Day 5 (2 min)</p> <p>a. Talk through the agenda for the day.</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>Display Slide 3. Trends in Reflections (5 min)</p> <p>a. Give participants time to review your feedback on their reflections from day 4 and offer reactions, comments, or follow-up questions.</p>
		 <p>Norms for Working Together: The Basics</p> <p>Purpose: Build trust and develop a productive study group for all participants.</p> <p>The Basics</p> <ul style="list-style-type: none"> • Arrive prepared and on time; stay for the duration; return from breaks on time. • Remain attentive, thoughtful, and respectful; engage and be present. • Eliminate interruptions (turn off cell phones, email, and other electronic devices; avoid sidebar conversations). • Make room for everyone to participate (monitor your floor time). 	<p>Display Slide 4. Norms for Working Together: The Basics (5 min)</p> <p>a. Review the norms as a group.</p> <p>b. Ask: “Any comments or suggested changes? How are we doing with applying these norms?”</p>
		 <p>Norms for Working Together: The Heart</p> <p>Purpose: Build trust and develop a productive study group for all participants.</p> <p>The Heart of RESPeCT Lesson Analysis and Content Deepening</p> <ul style="list-style-type: none"> • Keep the goal in mind: analysis of teaching to improve student learning. • Share your ideas, uncertainties, confusion, disagreements, questions, and good humor. All points of view are welcome. • Expect and ask questions to deepen everyone’s learning; be constructively challenging. • Listen carefully; seek to understand other participants’ points of view. 	<p>Display Slide 5. Norms for Working Together: The Heart (5 min)</p> <p>a. Review these norms as a group.</p> <p>b. Ask: “Any comments or suggested changes? Which of these norms do you think we could get better at applying individually and as a group?”</p> <p>c. Remind participants: “These norms will become increasingly important during the Summer Institute and throughout the academic year as we analyze one another’s classroom videos and learn</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			together.”
		 <p>STeLLA Conceptual Framework Learning to analyze science teaching through two lenses:</p> <ul style="list-style-type: none"> Student Thinking: allows you to learn and use strategies for more effective science teaching. Science Content Storyline: allows you to learn and use strategies for more effective science teaching. <p>SCIENCE THINKING</p> <ol style="list-style-type: none"> 1. Ask questions to elicit student ideas and predictions. 2. Ask questions to probe student ideas and procedures. 3. Ask questions to challenge student thinking. 4. Engage students in analyzing and interpreting data and observations. 5. Engage students in constructing explanations and arguments. 6. Engage students in using and applying new science ideas in a variety of ways and contexts. 7. Engage students in making connections by synthesizing and summarizing key science ideas. 8. Engage students in communicating in scientific ways. <p>STRATEGIES TO CREATE A COHERENT SCIENCE CONTENT STORYLINE</p> <ol style="list-style-type: none"> A. Identify one main learning goal. B. Set the purpose with a focus question or goal statement. C. Select activities that are matched to the learning goal. D. Select content representations and models related to the learning goal and engage students in their use. E. Sequence key science ideas and activities appropriately. F. Make explicit links between science ideas and activities. G. Link scientific ideas to other scientific ideas. H. Highlight key science ideas and focus question throughout. I. Summarize key scientific ideas. 	<p>Display Slide 6. STeLLA Conceptual Framework (1 min)</p> <ol style="list-style-type: none"> Transition: This slide marks the transition from the STL strategies to the Science Content Storyline Lens strategies. “Throughout the PD program, we’ll continue learning about the Student Thinking Lens (STL) strategies, but today we’ll transition to the Science Content Storyline Lens strategies.” Highlight the SCSL strategies on the slide.
		<p>Focus for the Week</p> <ul style="list-style-type: none"> • Content area 2: energy transfer (ET) • Science Content Storyline Lens <ul style="list-style-type: none"> • Strategies A, B, C, D, F, G, H, and I • Video-based lesson analysis (Energy Transfer lessons) • Energy Transfer lesson plans review (last day) • Academic-year schedule (last day) <ul style="list-style-type: none"> • Video recording • Study-group sessions 	<p>Display Slide 7. Focus for the Week (1 min)</p> <ol style="list-style-type: none"> “This week we’ll focus on a new content area: energy transfer. We’ll also examine the Science Content Storyline Lens strategies and the Energy Transfer lessons you’ll be teaching in the fall, analyze video clips of those lessons, and deepen your science-content knowledge related to the lesson plans.” “On the last day of the RESPeCT PD program, we’ll review the lesson plans and the schedule for the academic year.” “You may notice that we skip strategy E: Sequence key science ideas and activities appropriately. This strategy will be addressed during the school year as you teach the STeLLA lesson plans and analyze how they’re sequenced within each lesson and across lessons.”

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p style="text-align: center;">Today's Focus Questions</p> <ol style="list-style-type: none"> 1. What is the Science Content Storyline Lens (SCSL)? 2. Why is one main learning goal essential for science content storyline coherence? 3. How do we know whether something has energy? 4. What causes a moving object to have more or less motion energy? 	<p>Display Slide 8. Today's Focus Questions (1 min)</p> <p>a. Introduce the focus questions that will guide today's work.</p>
<p>8:25–8:40 15 min</p> <p>Review of Strategy 6: Use and Apply</p> <p>Slides 9–10</p>	<p>Purpose</p> <ul style="list-style-type: none"> • Review STL strategy 6 (use and apply) and deepen participants' understandings of this strategy and the Earth's Changing Surface lesson content. <p>Content</p> <ul style="list-style-type: none"> • STL strategy 6 engages students in using and applying new science ideas in a variety of ways and contexts. <p>What Participants Do</p> <ul style="list-style-type: none"> • Take a multiple-choice quiz to check their understanding of STL strategy 6. • Work on a scenario that engages them in using and applying strategy 6 and the Earth's Changing Surface lesson content. 	<p style="text-align: center;">Check Your Understanding of Strategy 6</p> <p>Jot down your responses to this multiple-choice quiz:</p> <ol style="list-style-type: none"> 1. Use-and-apply tasks are used [before/during/after] new science ideas are introduced. 2. For difficult content ideas, students might need to practice applying new ideas in [one/two/many] different contexts. 3. [True/false]: Use-and-apply questions or activities are used primarily for student assessment at the end of a unit. 4. It's appropriate for teachers to ask [elicit/probe/challenge] questions during a use-and-apply activity. 5. Teachers should [never/judiciously/always] tell students about science ideas they are missing or stating inaccurately. 	<p>Display Slide 9. Check Your Understanding of Strategy 6 (7 min)</p> <p>Note: Display this slide only if it wasn't used on day 4.</p> <p>a. "To check your understanding of STL strategy 6, jot down your responses to this multiple-choice quiz in your science notebooks."</p> <p>b. Have participants discuss their answers either in pairs or as a group. (If time is short, just read the answers aloud.)</p> <p>Answer key:</p> <ol style="list-style-type: none"> 1. After 2. Many 3. False 4. Challenge (and probe) 5. Judiciously (defined as "good or discriminating judgment; wise, sensible, or well advised")

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
	<p>Supplies</p> <ul style="list-style-type: none"> • Science notebooks 	 <p>Use and Apply Your Content Deepening Knowledge</p> <ul style="list-style-type: none"> • How do you think the Sierra Nevada Mountains were formed? Use your knowledge of the mountain-building process? • Do you think the Sierra Nevada Mountains today are being built up and getting higher or worn down and getting lower? 	<p>Display Slide 10. Use and Apply Your Content Deepening Knowledge (8 min)</p> <ol style="list-style-type: none"> Have participants form small groups. Distribute a relief map of the United States (from ECS lesson 1a) to each group and have participants locate handout 4.1 (Map of Plate Boundaries around the World) from ECS lesson 4a in their lesson plans binders. Small groups (4 min): “Discuss the use-and-apply questions on the slide with your small group, using the relief map and plate-boundaries map to support your ideas. Be ready to share your ideas and evidence from the maps.” Whole-group share-out (4 min): “What ideas and evidence do you have for answering these questions?”
<p>8:40–8:55 15 min</p> <p>What Is the Science Content Storyline Lens (SCSL)?</p> <p>Slides 11–13</p>	<p>Purpose</p> <ul style="list-style-type: none"> • Help participants develop strong initial understandings of the Science Content Storyline Lens. <p>Content</p> <ul style="list-style-type: none"> • A science content storyline brings coherence within and across science lessons. <p>What Participants Do</p> <ul style="list-style-type: none"> • Write about and discuss their typical process of planning science lessons. • Discuss their reading about the definition of a science content 	 <p>Planning Science Lessons: Quick Write</p> <p>What is generally your thinking process when you plan your science lessons?</p> <p>Be prepared to share your ideas with the group.</p>	<p>Display Slide 11. Planning Science Lessons: Quick Write (6 min)</p> <p>Note: This activity is a lead-in for thinking about specific SCSL strategies. When planning science lessons, are participants thinking primarily about (1) SCSL issues, such as learning goals, (2) student misconceptions (an STL issue), which is a great start but doesn’t include SCSL strategies, or (3) activities and/or classroom management and timing issues?</p> <ol style="list-style-type: none"> Individuals: Direct participants to take 2–3 minutes to write down the key things they think about when planning science lessons. Whole group: Ask participants to share their reflections with the group.

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process																			
	<p>storyline.</p> <ul style="list-style-type: none"> Review and discuss the TIMSS (Trends in Mathematics and Science Study) research basis for the Science Content Storyline Lens. <p>Posters and Charts</p> <ul style="list-style-type: none"> STeLLA Framework and Strategies poster <p>PD Resources</p> <ul style="list-style-type: none"> STeLLA strategies booklet 	<div data-bbox="787 375 1287 402" style="background-color: #cccccc; height: 17px; margin-bottom: 10px;"></div> <p>Lesson Analysis: Focus Question 1</p> <p>What is the Science Content Storyline Lens (SCSL)?</p> <ul style="list-style-type: none"> What is a science content storyline, and why is it important? 		<p style="text-align: center;">Familiar Forms of Energy</p>  <p style="text-align: center; font-size: small;">All photographs courtesy of Pixabay.com</p>	<p>energy can't be created or destroyed. The total amount of energy in a system remains constant</p> <p>Display Slide 38. Familiar Forms of Energy (8 min)</p> <p>a. Hide the images on the slide and ask participants to name some of the different forms of energy they encounter every day.</p> <p>b. Then reveal the images and ask participants the following questions:</p> <ul style="list-style-type: none"> • What are some ways in which energy reveals itself to us? • How would you describe the transfer of energy in the examples on the slide? • What form of energy do any of these objects illustrate? How would you describe this energy? <p>Key ideas in slide images:</p> <ul style="list-style-type: none"> • A lightning bolt radiates light from a region of air that is superheated and conducts heat into the air surrounding it. • Solar panels receive heat from the Sun in the form of radiation. • The Sun is an illuminated gas that releases heat to its cold environment in the form of radiation (much of the heat released is visible light). • Chemical potential energy in the molecular form of volatile chemicals is released to its environment as heat. • The nucleus of an atom is held together with a strong binding energy that remains dormant until the atom splits (as in a nuclear bomb or reactor). • Wind is the result of large masses of air moving from hot places on the planet to cold places (convective heat). This air can be captured and

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>converted to rotational kinetic energy in a windmill.</p> <ul style="list-style-type: none"> • Magnets have a strong attraction to one another, and prying them apart requires working against this magnetic force. Since work requires motion, working against this force succeeds only if the magnets actually move apart. • Electrical current is a form of work that sets charges in motion inside an electric conductor. This work is converted to light that we receive in the form of heat because it radiates away from an object (e.g., the fluorescent gas of CFL bulbs on the slide).
		<p>Forms of Energy</p> <ul style="list-style-type: none"> • Read each description on the handout and write down at least one example of each form of energy. • See if you can match any of the definitions on the handout with the pictures on the previous slide. 	<p>Display Slide 39. Forms of Energy (10 min)</p> <p>a. Distribute handout 5.6 (Forms of Energy) and read through the definitions.</p> <p>b. Individuals: Ask participants to write down an example of each form of energy on their handouts. Then ask participants to see if they can match any of the definitions on the handout with the pictures on the previous slide.</p> <p>Note: Return to previous slide to complete the handout. Try to elicit anything participants may remember from past courses in physics.</p> <p>c. Emphasize that these are energy forms, not energy transfers. Some of these forms aren't easy to detect with the senses.</p> <p>d. Whole-group share-out: Invite participants to share their examples of various forms of energy. Then ask if they were able to match and energy definitions with the slide photos.</p> <p>Examples of energy forms:</p> <ol style="list-style-type: none"> 1. Kinetic energy: a moving bicycle 2. Chemical energy: gasoline, wood, coal, food

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<ol style="list-style-type: none"> 3. Internal energy: the random motion and arrangement of atoms in a glass of water at room temperature 4. Gravitational potential energy: the pull of gravity causes water at the top of a mountain to flow downhill rather than uphill 5. Mechanical waves: sound, water, earthquakes 6. Electrical energy: turning on an electrical circuit connected to a battery 7. Radiant energy: heat from the Sun 8. Nuclear energy: the source of heat inside the Sun; atoms splitting to create fuel in submarines, power plants, and bombs 9. Elastic energy: a stretched rubber band 10. Mass energy: energy released in nuclear reactions and inside the Sun
		<div style="background-color: #cccccc; height: 10px; margin-bottom: 5px;"></div> <p style="color: #c00000;">How Energy Is Transferred</p> <p>Energy is transferred through work and as heat. How can you tell?</p> <p>Definitions</p> <p>Work is a push-or-pull force that acts across any amount of distance on an object</p> <p>Heat is a form of energy that flows automatically from a hot thing to a cold thing. 		<p style="text-align: center;">Investigation 2: High-Speed Energy</p> <ul style="list-style-type: none"> • Locate ET lesson handout 2.2 (High-Speed Energy Procedure) in your lesson plans binder. • Follow the directions carefully as you set up your ramps and conduct the investigation. • Make sure to record your data on handout 5.7 (Ramps, Speed, and Energy). <div style="display: flex; justify-content: space-around;">   </div>	<p>Display Slide 51. Investigation 2: High-Speed Energy (15 min)</p> <ol style="list-style-type: none"> Have participants locate ET handout 2.2 (High-Speed Energy Procedure) in their lesson plans binders. Then distribute handout 5.7 (Ramps, Speed, and Energy) to each participant. “For this investigation, you’ll pair up with your elbow partners again and explore the speed and energy of a marble as it rolls down ramps of different heights and moves a piece of Styrofoam.” Hand out the necessary materials to each pair of participants. Demonstrate the setup for participants, including how to mark the sheet of paper to indicate where the Styrofoam block stops moving (step 4) and how to measure the distance from the middle mark to the edge of the paper (step 7). Inform pairs that they may have to perform several practice runs to get the marble to land in the Styrofoam groove correctly. Emphasize that participants should finish steps 1–9 for Ramp 1 before setting up Ramp 2. Answer any questions before directing pairs to begin their investigations. Circulate around the room during the activity to assist as needed. <p>Note: Make sure participants complete the entire handout during this investigation. In the actual activity, students gather data in one lesson and analyze it in the following lesson.</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Investigation 2: High-Speed Energy</p> <ol style="list-style-type: none"> 1. Where did you detect energy in the ramp-and-marble setups? 2. How did you detect motion (kinetic) energy in the marbles? 3. Did you detect energy in any other objects? 4. Which marble had more motion (kinetic) energy? What's your evidence? 	<p>Display Slide 52. Investigation 2: High-Speed Energy (5 min)</p> <ol style="list-style-type: none"> a. Read the questions on the slide. b. Whole-group share-out: Invite pairs to share their observations and evidence from the investigation. Probe participants' responses and elicit differing points of view. c. During this discussion, record participants' observations and ideas on chart paper. d. Try to reach a group consensus regarding question 4. Then have participants write the answers to each question in their science notebooks.
		<p>Reflect: Content Deepening Focus Question 2</p> <p>What causes a moving object to have more or less motion energy?</p>	<p>Display Slide 53. Reflect: Content Deepening Focus Question 2 (4 min)</p> <ol style="list-style-type: none"> a. Review the focus question on the slide. b. Invite participants to share their ideas for answering the question, using observations and evidence from the ramp-and-marble investigation. c. Encourage participants to agree, disagree, ask questions, or add to the ideas others share. d. During this discussion, record key ideas on chart paper.

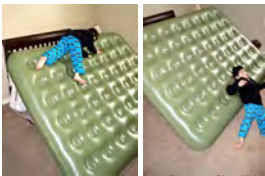

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p> Key Science Ideas</p> <ul style="list-style-type: none"> • Energy is all around us, and we can detect its presence with our senses. • Moving objects have a form of energy called motion energy. Motion energy is also called kinetic energy. • A marble rolls faster down a higher ramp than a lower ramp of the same length. • When a faster-moving marble rolls down a higher ramp and collides with an object at the bottom, it will push that object farther than it would if it rolled down a lower ramp at a slower speed. Therefore, the faster-moving marble has more energy. 	<p>Display Slide 54. Key Science Ideas (3 min)</p> <p>a. Review the key science ideas on the slide that answer the focus question. Emphasize that participants' observations and evidence from the ramp-and-marble investigation helped shape these responses.</p> <p>b. Whole-group discussion: "Does everyone agree with these ideas? Would you like to add or revise anything?"</p> <p>c. Have participants copy these science ideas into their science notebooks under the focus question.</p>
		<p>More Than Meets the Eye: Energy Detectives</p> <ol style="list-style-type: none"> 1. Is all energy detectable? 2. Where does energy go after you detect it? 3. What forms of energy do hyper kids have? 4. Does a child transfer energy when sitting still and quiet? 	<p>Display Slide 55. More Than Meets the Eye: Energy Detectives (8 min)</p> <p>a. Think-Pair-Share (4 min): Ask participants to think about the questions on the slide that relate to today's energy-detectives investigation. Then have them pair up and discuss their ideas with an elbow partner.</p> <p>b. Whole-group discussion (4 min): Invite participants to share their ideas with the group. Probe participants' responses and elicit differing points of view.</p> <p>c. Following the discussion, highlight these answers:</p> <ul style="list-style-type: none"> • Question 1: Some forms of energy can't be detected with our senses. The chemical potential energy of a match and the gravitational potential energy of an object at the top of a hill are two examples. • Question 2: The energy we detect in an object can transfer as heat to the environment. As a bouncing ball hits the ground, its energy is

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p data-bbox="827 753 1209 813">More Than Meets the Eye: High-Speed Energy</p> <ol data-bbox="827 833 1255 1073" style="list-style-type: none"> 1. Where did the marble's energy come from in the ramp-and-marble investigation? 2. How did the marble's potential energy change based on ramp height? 3. Where did the marble's energy go? 4. How could you make the marble go faster? 5. What would happen if the marble were made of steel? 	<p data-bbox="1388 232 1944 289">gradually lost as heat to the environment until it has no more energy.</p> <ul data-bbox="1360 293 1944 683" style="list-style-type: none"> • Question 3: Hyper kids have kinetic energy from food (i.e., sugar from breakfast), but their energy also transfers to the environment in the form of heat (conduction), sound waves, and working against the ground's friction as they walk and run (which leads to heat conduction). The energy of hyper kids is like the internal energy of molecules inside an object that gains heat. • Question 4: Even when perfectly still, all humans radiate heat like little space heaters and consume heat through their bodily functions. <p data-bbox="1312 719 1944 781">Display Slide 56. More Than Meets the Eye: High-Speed Energy (8 min)</p> <ol data-bbox="1312 846 1944 1421" style="list-style-type: none"> a. Think-Pair-Share (4 min): Ask participants to think about the questions on the slide that relate to today's high-speed energy investigation. Then have them pair up and discuss their ideas with an elbow partner. b. Whole-group discussion (4 min): Invite participants to share their ideas with the group. Probe participants' responses and elicit differing points of view. c. Following the discussion, highlight these answers: <ul data-bbox="1360 1182 1944 1421" style="list-style-type: none"> • Question 1: The energy the marble had to roll down the ramp came entirely from its gravitational potential energy at the top of the ramp. Frictional force works on the moving marble, causing it to slow down and eventually stop. That work is proportional to distance: $W = fd$ (f = frictional force; d = distance traveled). That work converts entirely into heat by slightly

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>raising the temperature of the floor and the foam. Eventually, that heat radiates or conducts into other adjacent objects and is released into the air. So energy isn't lost; it's just transferred into heat. And heat isn't detectable in this case.</p> <ul style="list-style-type: none"> • Question 2: The marble's total energy at the top of the ramp is in the form of gravitational potential energy, which is proportional to the ramp height and independent of steepness. • Question 3: As the marble rolls down the ramp, it loses potential energy and gains kinetic energy. As kinetic energy decreases, frictional force increases, slowing the marble down. Ultimately, energy turns to heat once the marble has reached a complete stop. • Question 4: The marble's speed could be increased with a longer or higher ramp, but not both. The amount of potential energy and, thus, the marble's final kinetic energy come from the height of the ramp. • Question 5: If the marble were made of steel, it would be heavier and have more mass. The kinetic energy of a heavier marble moving at the same speed as a lighter marble would depend on that mass: $KE = (1/2)mv^2$. So the heavier marble moving at the same speed as the lighter marble would have more kinetic energy because it has more mass. The heavier marble, therefore, would push the Styrofoam farther.

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Energy Puzzles</p> <ol style="list-style-type: none"> Kinetic energy: the energy of a moving body, object, or system proportional to mass and velocity squared, or $KE = (1/2)mv^2$ Gravitational potential energy: the energy of an object above the ground (the lowest surface of Earth) proportional to mass, acceleration of the object, and height, or $GPE = mass \times acceleration \times height$ Heat: a less useful end form of energy that transfers from one object to another as a result of temperature differences <ul style="list-style-type: none"> Conduction: The flow of heat from a warmer object to a colder object through direct contact Convection: The circular flow of heat that occurs when warmer air or water rises and then sinks as it cools Radiation: The transfer of heat energy through electromagnetic waves <p>• Heat automatically flows in only one direction, from hot to cold.</p>	<p>Display Slide 57. Energy Puzzles (8 min)</p> <ol style="list-style-type: none"> Highlight the information about kinetic energy, gravitational potential energy, and heat on the slide. With these ideas in mind, discuss the following questions with participants: <ul style="list-style-type: none"> Which object has more kinetic energy at 55 miles per hour: a Hummer or a Mini Cooper? Which of two identical cars has higher kinetic energy if one is moving faster? How does a skier gain potential energy? Which of two skiers at the top of a mountain has more potential energy: a fat one or a skinny one? Why? Heat is an inescapable transfer of energy that can't be ignored in our examples. Rub your hands together and feel your work turn into heat. But can you reverse this transfer from hot to cold? Imagine coffee getting cold in a room. Where does heat go? Can it return to the coffee mug by itself? Scattered heat isn't as useful as localized heat. Would you rather have a lot of heat in your car's pistons or heat coming out of the tailpipe and escaping into the atmosphere? The pistons' heat is far more useful than the heat escaping from the tailpipe!

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p style="text-align: center;">Playing Energy Detectives</p> <div style="display: flex; justify-content: space-around;"> <div style="text-align: center;">  <p>Scenario 1: A jet engine climbs into the air at a high velocity, taking happy passengers to a far-away destination</p> </div> <div style="text-align: center;">  <p>Scenario 2: Tasty sausages are cooking on a wood-burning grill.</p> </div> </div>	<p>Display Slide 58. Playing Energy Detectives (8 min)</p> <p>a. “As energy detectives, let’s investigate the scenarios on this slide.”</p> <p>b. Introduce each scenario and ask participants the following questions:</p> <ol style="list-style-type: none"> 1. Which forms of detectable energy are present in each scenario? 2. What transfers of energy are taking place in each scenario? 3. How does kinetic energy change in the airplane? 4. How does potential energy change in the airplane? 5. What restrictions apply to the flow of heat in these scenarios (i.e., in what directions can heat flow)? <p>Answer key:</p> <ul style="list-style-type: none"> • Question 1: kinetic energy and light energy • Question 2: Chemical energy in the aircraft fuel is converted to kinetic energy, gravitational potential energy, heat (exhaust), and the roaring sound of the engine. • Question 3: The plane’s kinetic energy increases because the engine is working to keep the plane climbing into the air. • Question 4: The plane’s potential energy also increases because the engine is working against Earth’s gravitational pull. • Question 5: Heat can flow in only one direction, from hot to cold.

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p style="text-align: center;">An Energy Challenge</p> <p>A boy climbs to the top of a bumpy air mattress and then slides down to the floor, where he comes to a gentle stop.</p>  <ol style="list-style-type: none"> 1. What forms of energy are present when the boy is at the top of the mattress? 2. What forms of energy are present as the boy slides halfway down the mattress? 3. Where did the energy go when the boy finds himself on the floor? 4. What would happen if there were no friction between the boy and adjacent objects? 	<p>Display Slide 59. An Energy Challenge (8 min)</p> <ol style="list-style-type: none"> a. Read the scenario and questions on the slide. b. Individuals: Direct participants to answer the questions in their science notebooks, using evidence and reasoning to support their ideas. <ul style="list-style-type: none"> Note: The challenge highlights the transfer of kinetic energy to heat energy through friction in everyday experiences. c. Whole group: Call on a few participants to share their answers and reasoning. Probe participants' responses and elicit differing points of view. <ul style="list-style-type: none"> Note: If time is limited, skip the group share-out and just read through the answer key. d. Quickly highlight the correct answers (see answer key). <p>Answer key:</p> <ul style="list-style-type: none"> • Question 1: Potential energy is present at the top of the mattress. • Question 2: Potential energy, kinetic energy, and frictional heat are all present when the boy is halfway down the mattress. • Question 3: All of the energy converted to heat. • Question 4: All of the boy's initial potential energy would transfer to kinetic energy once he reached the bottom of the mattress.

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Common Energy Misconceptions</p> <ol style="list-style-type: none"> 1. Energy is a “thing,” a material object. 2. Energy is the same thing as force and power. 3. If an object isn’t part of some action, it has no energy. 4. Energy has human qualities like want or desire. 5. Energy can be used up or destroyed. 6. Energy can be created. 7. Only mechanical things and loud things have energy. 8. We can do useful things with all forms of energy. 9. There’s no need for energy conservation, since all energy is conserved. 	<p>Display Slide 60. Common Energy Misconceptions (8 min)</p> <ol style="list-style-type: none"> a. Read through the common energy misconceptions on the slide. b. Ask volunteers to contribute a scientifically accurate statement that replaces each misconception. c. Probe participants’ responses and elicit differing points of view. Highlight ideas in the answer key as needed. <p>Answer key:</p> <ul style="list-style-type: none"> • Question 1: Energy isn’t a concrete thing. Objects themselves aren’t energy; they <i>possess</i> energy in various forms. • Question 2: Force transfers energy when it acts on an object over a certain distance. Power is the rate at which energy is transferred. • Question 3: Action isn’t necessary for energy to be present. Potential energy is stored energy quietly waiting to be released (e.g., a fuel tank, matches, a boulder at the top of a hill, a squeezed spring). • Question 4: It’s common to use everyday language to explain scientific phenomena. Students might say, “Heat <i>wants</i> to move from hot to cold,” or “The marble <i>likes</i> being at the bottom of the ramp,” or “The packing peanut <i>needs</i> to stop.” Inanimate objects don’t have human qualities associated with volition or emotion. Qualities such as love, hate, want, need, intention, and desire don’t affect the laws of nature. • Questions 5 and 6: Energy is always conserved. It may change from one form (maybe a visible form) to another form (maybe an invisible form), but it can never be created, used up, or destroyed.

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<ul style="list-style-type: none"> • Question 7: The Sun is the source of most of our energy, and it isn't mechanical or loud. • Question 8: Heat energy that escapes into the atmosphere or outer space isn't useful and can't be recaptured even though it's still energy. • Question 9: Useful forms of energy, such as different types of fuel and localized heat sources, are hard to access, extract, and refine. When we use them, they turn into heat energy and spread out into the atmosphere, which isn't useful.
<p>3:15–3:30 15 min</p> <p>Wrap-Up: Summary, Homework, and Reflections</p> <p>Slides 61–66</p>	<p>Purpose</p> <ul style="list-style-type: none"> • Summarize and reflect on key ideas from today's learning, including the Science Content Storyline Lens, STeLLA strategy A, and the Energy Transfer science content. <p>What Participants Do</p> <ul style="list-style-type: none"> • Review today's focus questions. • Share key ideas from today's lesson analysis (SCSL strategy A) and content deepening work. • Copy down the homework assignment for day 6. • Discuss expectations for the extended homework assignment (Energy Transfer lesson plan review). • Write reflections on today's learning. <p>Posters and Charts</p> <ul style="list-style-type: none"> • Effective Science Teaching chart 	<p>Today's Focus Questions</p> <ol style="list-style-type: none"> 1.
