Matter in a Simple Food Chain

How does each organism in a food chain get the **matter** it needs to live and grow?

Add words, drawings, and arrows to the diagram below to show how each organism gets the matter it needs. Make sure to label your arrows.

Be ready to tell others what happens to the matter in the bush, in the mouse, and in the hawk.

Think About ...

- Which organisms use matter to make food? What matter do they use to make food?
- Which organisms use food matter to
 - grow?
 - get energy?
 - produce wastes?
