

RESPeCT Summer Institute Professional Development Leader Guide (PDLG)

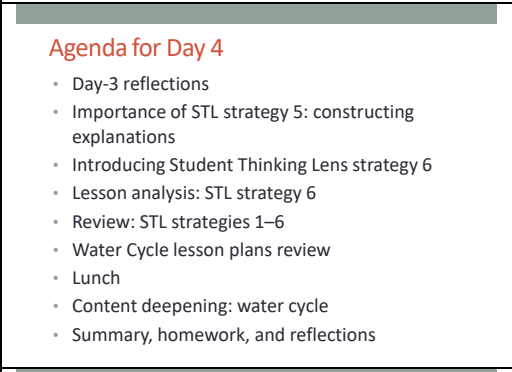

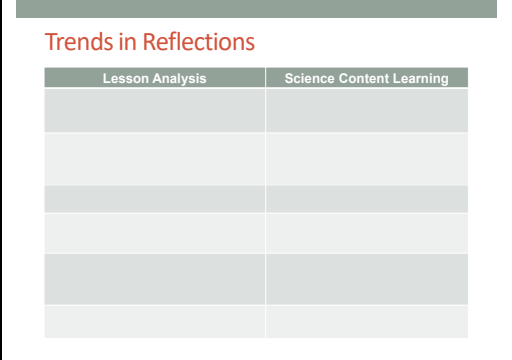

Grade Level	5	Day	4	STeLLA Strategy	STL Strategy 6: Use and Apply New Science Ideas	Subject Matter Focus	Water Cycle
Focus Questions		<ul style="list-style-type: none"> • Why is it necessary to engage students in using and applying new science ideas in a variety of ways and contexts? • How will the Student Thinking Lens strategies help you teach the Water Cycle lessons? • What are the two basics steps of cloud formation? • How does the process of distillation simulate the overall water cycle? 					
Main Learning Goals		<p>Participants will understand the following:</p> <ul style="list-style-type: none"> • In order to develop meaningful understandings of science ideas, students need multiple opportunities to try using and applying new science ideas in a variety of ways and contexts. • Explore how a distillation apparatus simulates the water cycle on Earth by highlighting cloud formation and precipitation. 					
Preparation				Materials		Videos	
<p>Daily Setup Tasks</p> <ul style="list-style-type: none"> • Check that video clips are correctly linked to PowerPoint (PPT) slides. • Set up PowerPoint. • Make sure video clips play correctly with good sound. • Arrange furniture and food. • Arrange participant materials. • Put up posters and charts. <p>Planning and Preparation Tasks</p> <ul style="list-style-type: none"> • Study the PDLG, PowerPoint slides (PPTs), video clips, and handouts. Make changes to PPTs if needed. • Review the content deepening slides and determine the amount of time to allot for each slide based on the needs of your group. Add timing cues to PPTs, if desired, to help you stay on track. • Review the reflections from day 3 and create a summary slide. • Watch video clips and anticipate participant responses. • Prepare charts for the day's agenda and focus questions. • Using PPT slide 24 as a model, prepare a chart of the STL strategies highlighted in the Water Cycle lesson plans. 				<p>Posters and Charts</p> <ul style="list-style-type: none"> • STeLLA Framework and Strategies poster • Day-4 Agenda (chart) • Day-4 Focus Questions (chart) • Norms for Working Together (chart) • Strategy charts from days 1–3 (STL strategies 1–5) • Chart of STL strategies highlighted in Water Cycle lesson plans (see PPT slide 24 for model) • Parking Lot poster <p>Handouts in RESPeCT PD Binder Front Pocket</p> <ul style="list-style-type: none"> • Z-fold summary chart: Student Thinking Lens Strategies <p>Handouts in RESPeCT PD Binder, Day 4</p> <ul style="list-style-type: none"> • 4.1 Importance of Engaging Students in Constructing Scientific Explanations (task sheet) • 4.2 Student Work from Zembal-Saul Book <i>What's Your Evidence?</i> • 4.3 Benefits of Engaging Students in Constructing Scientific Explanations • 4.4 Transcript for Video Clip 4.1 • 4.5 Transcript for Video Clip 4.2 		<ul style="list-style-type: none"> • Hershberger video clip, <i>Introducing the CER</i> (on companion DVD for Zembal-Saul book <i>What's Your Evidence?</i>) • Video Clip 4.1: Dieken classroom (use and apply: explaining water on a cold soda can); 4.1_stella_WC_dieken_c1 • Video Clip 4.2: Anderson classroom (review Student Thinking Lens strategies); 4.2_stella_WC_anderson_c1 • Happy Scientist <i>Cloud Formation</i> YouTube video. 	

<ul style="list-style-type: none"> • Content deepening: <ul style="list-style-type: none"> • Assemble supplies for the distillation apparatus (beaker, stopper, aquarium tubing, water, hot plate, and collection tube). • Set up the Happy Scientist <i>Cloud Formation</i> YouTube video. 	<ul style="list-style-type: none"> • 4.6 Identifying Student Thinking Lens Strategies • 4.7 Daily Reflections—Day 4 <p>PD Leader Masters, Days 1–4</p> <ul style="list-style-type: none"> • PD Leader Master: 5th-Grade Guide to Video Clips for Day 4 <p>Supplies</p> <ul style="list-style-type: none"> • Science notebooks • Chart paper and markers • Lesson materials kit (water cycle) • Ball-and-stick model kits (with magnets) • Distillation apparatus (beaker, stopper, aquarium tubing, water, hot plate, and collection tube) <p>PD Resources</p> <ul style="list-style-type: none"> • STeLLA strategies booklet • RESPeCT PD program binder • RESPeCT lesson plans binder <p>Resources in Lesson Plans Binder</p> <p><i>Resources section:</i></p> <ul style="list-style-type: none"> • Water Cycle Content Background Document • Common Student Ideas about Matter, Molecules, and the Water Cycle 	
---	--	--

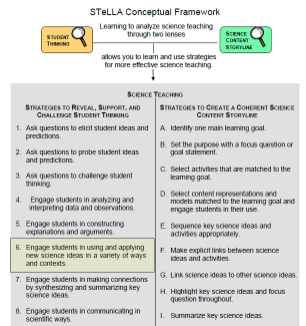

DAY 4 SESSION OUTLINE

Time	Activities	Purpose
8:00–8:15 15 min	Getting Started: Housekeeping, Agenda, Day-3 Reflections, Focus Questions	<ul style="list-style-type: none"> • Build community by sharing participants’ reflections from day 3. • Set the stage for a day of learning.
8:15–8:50 35 min	Importance of STL Strategy 5: Constructing Explanations	<ul style="list-style-type: none"> • Develop an appreciation for the multiple ways in which engaging students in constructing scientific explanations can have an impact on student learning within and beyond science.
8:50–9:10 20 min	Introducing Student Thinking Lens (STL) Strategy 6	<ul style="list-style-type: none"> • Develop an initial understanding of the purpose and key features of strategy 6: Engage students in using and applying new science ideas in a variety of ways and contexts.
9:10–10:10 60 min	Lesson Analysis: STL Strategy 6	<ul style="list-style-type: none"> • Use lesson analysis of classroom videos to better understand strategy 6. • Deepen science-content knowledge of the water cycle through lesson analysis.
10:10–10:55 45 min (Includes 10-min break)	Review: STL Strategies 1–6	<ul style="list-style-type: none"> • Review and deepen understandings of key similarities and differences among STL strategies 1–6.
10:55–12:00 65 min	Water Cycle Lesson Plans Review	<ul style="list-style-type: none"> • Understand why the Water Cycle lesson plans are so scripted and how they should be used before and during the lessons. • Understand the conceptual flow within and across the Water Cycle lessons. • Understand the focus question, main learning goal, and main activity in each lesson. • Understand how STL strategies 1–6 are embedded in the lessons.
12:00–12:45 45 min	LUNCH	
12:45–3:15 150 min (Includes 10-min break)	Chemistry Content Deepening: Water Cycle	<ul style="list-style-type: none"> • Explore how a distillation apparatus simulates the water cycle on Earth and highlights cloud formation as a two-step process central to the water cycle.
3:15–3:30 15 min	Wrap-Up: Summary, Homework, and Reflections	<ul style="list-style-type: none"> • Summarize and reflect on key ideas from today’s learning and preview the transition to the Science Content Storyline Lens (SCSL) strategies.

DAY 4

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
<p>8:00–8:15 15 min</p> <p>Getting Started</p> <p>Slides 1–5</p>	<p>Purpose</p> <ul style="list-style-type: none"> • Build community by sharing participants' reflections from day 3. • Set the stage for a day of learning. <p>What Participants Do</p> <ul style="list-style-type: none"> • Review the day's agenda. • Discuss the reflections from day 3. • Read today's focus questions. <p>Posters and Charts</p> <ul style="list-style-type: none"> • STeLLA Framework and Strategies poster • Day-4 Agenda (chart) • Day-4 Focus Questions (chart) 	  	<p>Display Slide 1. RESPeCT PD Program (5 min)</p> <p>a. Take care of any housekeeping issues.</p> <p>Display Slide 2. Agenda for Day 4 (3 min)</p> <p>a. Talk through the agenda for the day.</p> <p>Display Slide 3. Trends in Reflections (5 min)</p> <p>a. Invite participants to look at your feedback on their reflections from day 3 and offer reactions, comments, or follow-up questions.</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Today's Focus Questions</p> <ol style="list-style-type: none"> 1. Why is it necessary to engage students in using and applying new science ideas in a variety of ways and contexts? 2. How will the Student Thinking Lens strategies help you teach the Water Cycle lessons? 3. What are the two basic steps of cloud formation? 4. How does the process of distillation simulate the overall water cycle? 	<p>Display Slide 4. Today's Focus Questions (1 min)</p> <ol style="list-style-type: none"> a. Introduce the focus questions that will guide today's work. b. "Like STeLLA strategies 4 and 5, the goal of strategy 6 is to move student thinking forward toward deeper understandings of science ideas."
	<p>8:15–8:50</p> <p>35 min</p> <p>Importance of STL Strategy 5: Constructing Explanations</p> <p>Slides 6–7</p> <p>Purpose</p> <ul style="list-style-type: none"> • Develop an appreciation for the multiple ways in which engaging students in constructing scientific explanations can have an impact on student learning within and beyond science. <p>Content</p> <ul style="list-style-type: none"> • Engaging students in constructing scientific explanations helps them develop meaningful understandings of science ideas 	<p>The Importance of Engaging Students in Constructing Scientific Explanations</p> <p>Read handout 4.1 and your group-specific handout. Then complete the assigned task:</p> <p>Group 1: Analyze a student explanation (handout 4.2).</p> <p>Group 2: Summarize benefits for students of constructing scientific explanations (handout 4.3).</p> <p>Group 3: Summarize the benefits for teachers of engaging students in constructing scientific explanations (handout 4.3).</p>	<p>Display Slide 5. STeLLA Conceptual Framework (1 min)</p> <ol style="list-style-type: none"> a. Draw participants' attention to the new strategy highlighted on the slide. b. "Strategy 6 is the third STL strategy that is a type of activity designed to move student thinking forward." <p>Display Slide 6. The Importance of Engaging Students in Constructing Scientific Explanations (25 min)</p> <p>Note: If you need some time to catch up on day-3 activities, you can skip this slide. However, this activity is beneficial for reviewing strategy 5 (constructing explanations) and helping participants understand why explanation building is such important work in science and beyond.</p> <p>Timing note: For this segment, allot 5 minutes for reading, 10 minutes to prepare for a group share-</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
	<p>and how scientists work.</p> <p>What Participants Do</p> <ul style="list-style-type: none"> Review jigsaw-strategy readings about the importance of scientific explanations and examine a sample of student work. Share key ideas about constructing scientific explanations. Watch and discuss a lesson video in which the teacher explicitly teaches 3rd graders how to construct explanations that include a claim, evidence, and reasoning that connects to science ideas. <p>Posters and Charts</p> <ul style="list-style-type: none"> STeLLA Framework and Strategies poster Strategy charts from days 1–3 (STL strategies 1–5) <p>Videos</p> <ul style="list-style-type: none"> Hershberger video clip, <i>Introducing the CER</i> <p>Handouts in PD Binder</p> <ul style="list-style-type: none"> 4.1 Importance of Engaging Students in Constructing Scientific Explanations (task sheet) 4.2 Student Work from Zembal-Saul Book <i>What's Your Evidence?</i> 4.3 Benefits of Engaging Students in Constructing Scientific Explanations <p>PD Resources</p> <ul style="list-style-type: none"> STeLLA strategies booklet 	<p>Slides</p> <p>The CERA Framework for Constructing Scientific Explanations</p> <ul style="list-style-type: none"> Next, we'll watch video clip of a 3rd-grade teacher instructing students how to construct scientific explanations. Think about ideas this clip gives you for helping your students learn to construct scientific explanations by making a claim, supporting it with evidence and reasoning, and considering alternative explanations and strategies (CERA). <p>Link to Introducing the CER video clip.</p>	<p>out, and 10 minutes for the share-out.</p> <ol style="list-style-type: none"> Divide participants into three groups or pairs. Assign each group a number (1, 2, 3). Direct participants to three handouts: <ol style="list-style-type: none"> Importance of Engaging Students in Constructing Scientific Explanations (handout 4.1 in PD program binder) (This handout describes what groups are to do with the following two handouts.) Student Work from Zembal-Saul Book <i>What's Your Evidence?</i> (handout 4.2 in PD binder) (Group 1's task is linked to this handout.) Benefits of Engaging Students in Constructing Scientific Explanations (handout 4.3 in PD binder) (Tasks for Groups 2 and 3 are linked to this handout.) After participants have read the designated handouts for their groups and completed their assigned tasks, invite them to share out. <p>Display Slide 7. The CERA Framework for Constructing Scientific Explanations (10 min)</p> <p>Note: This activity is optional but powerful.</p> <ol style="list-style-type: none"> "Let's watch how one 3rd-grade teacher taught her students to construct scientific explanations. This is the teacher whose student writing Group 1 just read about. The class in this video clip has been studying simple machines (such as pulleys and levers)." "We're not going to analyze this video clip in terms of STeLLA strategies. Instead, think about ideas this clip gives you as to how you might introduce your students to the CERA framework for constructing scientific explanations, which

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>involves making a claim, supporting it with evidence and reasoning, and considering alternative explanations and strategies.”</p> <p>c. After watching the clip, discuss participants’ reactions and any ideas it gave them about how they might help their students learn to construct strong scientific explanations.</p> <p>Note: Make sure participants are aware that in addition to using the CERA framework as a tool for teaching students how to develop scientific explanations and arguments (STeLLA strategy 5) in the classroom, they will be using the same framework for videocase-based lesson analysis of their science teaching in RESPeCT study groups throughout the school year.</p>
<p>8:50–9:10</p> <p>20 min</p> <p>Introducing Student Thinking Lens (STL) Strategy 6</p> <p>Slide 8</p>	<p>Purpose</p> <ul style="list-style-type: none"> Develop an initial understanding of the purpose and key features of strategy 6: Engage students in using and applying new science ideas in a variety of ways and contexts. <p>Content</p> <ul style="list-style-type: none"> After students encounter new science ideas, they need opportunities to practice them and see their usefulness in explaining a variety of phenomena. Activities that challenge students to use and apply new ideas give them the time and space to really make sense of the concepts. <p>What Participants Do</p> <ul style="list-style-type: none"> Make and discuss charts highlighting the purpose and key 	<p>Introducing STL Strategy 6</p> <p>Engage students in using and applying new science ideas in a variety of ways and contexts.</p> <ol style="list-style-type: none"> What are the purpose and key features of this strategy? Why do you think use-and-apply questions or activities are often shortchanged in science teaching? 	<p>Display Slide 8. Introducing STL Strategy 6 (20 min)</p> <p>a. Small groups (10 min): Divide participants into two groups to make charts highlighting the purpose and key features of strategy 6: Engage students in using and applying new science ideas in a variety of ways and contexts. Encourage participants to refer to the STeLLA strategies booklet and STL Z-fold summary chart for this activity.</p> <p>b. Whole group (10 min): Have groups present their charts in a whole-group share-out and compare them. Ask participants, “What differences and similarities do you notice when you compare your charts with those of other groups?”</p> <p>Key ideas:</p> <ul style="list-style-type: none"> Strategy 6 is a time for “strategic telling” and making sure students are using science ideas

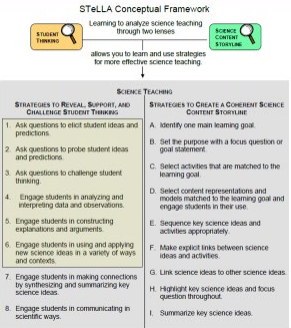

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
	features of strategy 6. Supplies <ul style="list-style-type: none"> • Chart paper and markers PD Resources <ul style="list-style-type: none"> • STeLLA strategies booklet • STL Z-fold summary chart (front pocket of PD binder) 		accurately. <ul style="list-style-type: none"> • A use-and-apply question or activity is introduced <i>after</i> students have experienced/encountered a new science idea. It provides an opportunity for students to use and apply the idea in a new context or novel way and/or link two or more science ideas together. • A common misconception is that use-and-apply questions or activities <i>assess</i> student learning. Teachers often talk about asking these kinds of questions on tests. However, according to research findings published in <i>How People Learn</i> (National Academy of Sciences, 2000), <i>application</i> is part of the learning process, or developing a conceptual framework. If application is treated like assessment, students may encounter a use-and-apply question on a test without ever having had the opportunity to practice this way of thinking as part of their learning.
9:10–10:10 60 min Lesson Analysis: STL Strategy 6 Slides 9–14	Purpose <ul style="list-style-type: none"> • Use lesson analysis of classroom videos to better understand strategy 6. • Deepen science-content knowledge of the water cycle through lesson analysis. Content <ul style="list-style-type: none"> • Strategy 6 involves engaging students in using and applying 	Lesson Analysis: Focus Question 1 Why is it necessary to engage students in using and applying new science ideas in a variety of ways and contexts?	Display Slide 9. Lesson Analysis: Focus Question 1 (Less than 1 min) a. Highlight the focus question that will guide the lesson analysis work during this phase.

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
	<p>new science ideas in a variety of ways and contexts.</p> <ul style="list-style-type: none"> Condensation occurs when water-vapor molecules in the air lose heat energy (cool), slow down, and join together to form liquid-water droplets. Water vapor in the air (a gas) is invisible, but liquid water is visible because many, many molecules of water are gathered close together. Evaporation occurs when water molecules in the liquid state gain heat energy, speed up, move apart, escape from the surface of the liquid, and spread out into the air. Water molecules in boiling water in a teapot can evaporate out of the spout as invisible water vapor, but when they hit the cooler air outside the teapot, they lose heat energy, slow down, and form tiny droplets of liquid water called <i>steam</i>. Over time, these droplets evaporate again as they encounter higher-energy water-vapor molecules in the air. <p>What Participants Do</p> <ul style="list-style-type: none"> Watch a classroom video clip to identify strategy 6 and analyze student thinking that is revealed and challenged from using this strategy. Check their understandings of strategy 6 by taking a quick multiple-choice quiz. 	<p>Lesson Analysis: Review Lesson Context</p> <p>Read the lesson context for this video clip at the top of the transcript (handout 4.4 in your PD program binder).</p> <hr/> <p>Lesson Analysis: Identify Strategy 6</p> <ol style="list-style-type: none"> What makes this a use-and-apply task? (Focus on task.) What science ideas does each scenario require students to use and apply? <ul style="list-style-type: none"> 2 cups of water (days 1 and 10) Cup of water in sealed plastic bag Cold water bottle Cold can of soda Teakettle What do you notice about the types of questions the teacher asks during the clip? <p>Link to video clip 1: 4.1 stella WC dieken c1</p> 	<p>Display Slide 10. Lesson Analysis: Review Lesson Context (2 min)</p> <ol style="list-style-type: none"> “Read the lesson context at the top of the video transcript (handout 4.4 in your PD program binders).” Make sure participants understand the science content and activity that are the focus of this video clip. <p>Note: Refer to the Water Cycle Content Background Document as needed throughout the lesson analysis.</p> <hr/> <p>Display Slide 11. Lesson Analysis: Identify Strategy 6 (25 min)</p> <ol style="list-style-type: none"> “As you watch the video, think about what makes the activity in this clip a use-and-apply task. What science ideas should students be using and applying in each scenario? Also notice what kinds of questions the teacher asks.” Show the video clip. Individuals: “Think about the questions on the slide and mark the transcript as you identify the use of strategy 6.” Whole group: Discuss participants’ responses to the questions. <p>Ideal observations:</p> <ol style="list-style-type: none"> This is a use-and-apply task because students in the video clip are using science ideas they have previously studied to explain five different scenarios. Thus, they are using new science

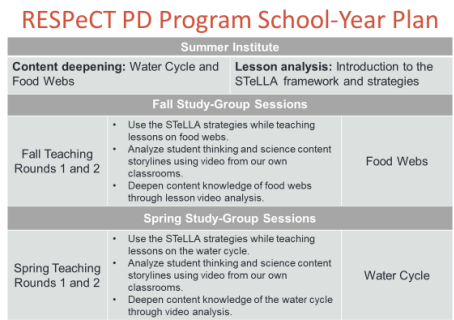

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
	<p>Videos</p> <ul style="list-style-type: none"> • Video Clip 4.1, Dieken classroom <p>Handouts in PD Binder</p> <ul style="list-style-type: none"> • 4.4 Transcript for Video Clip 4.1 <p>PD Leader Masters</p> <ul style="list-style-type: none"> • PD Leader Master: 5th-Grade Guide to Video Clips for Day 4 <p>PD Resources</p> <ul style="list-style-type: none"> • STeLLA strategies booklet <p>Resources in Lesson Plans Binder</p> <p><i>Resources section:</i></p> <ul style="list-style-type: none"> • Content background document 		<p>ideas to explain a variety of contexts.</p> <p>b. All of the scenarios challenge students to think about changes in heat energy and how they affect water molecules and changes of state in the water cycle.</p> <ul style="list-style-type: none"> • Scenario 1 focuses on evaporation. • Scenario 2, the cup of water in the plastic bag, demonstrates both the evaporation of water molecules from the cup and the condensation of water on the inside of the baggie (changing from water vapor back to liquid water as heat energy is lost). • Scenarios 3 and 4 (cold water bottle/cold soda can) both demonstrate condensation. Water-vapor molecules in the air near the cold can or bottle lose heat energy, slow down, and join together to form droplets of liquid water. • Scenario 5, the teakettle, illustrates both evaporation and condensation. As the water boils, water molecules in the liquid state speed up, move apart, and escape into the air as water vapor. At the end of the spout, you see nothing—water vapor is there but invisible. Then the water vapor cools (loses heat energy) as it hits the cooler air above the spout, causing the molecules to slow down, join together, and form liquid-water droplets in the air above the spout. This cloud of liquid-water droplets is called <i>steam</i>. As these droplets collide with faster-moving water-vapor molecules in the air, they quickly gain energy, speed up, and evaporate again. <p>c. The video clip appropriately includes challenge questions (and statements) because the goal of strategy 6 is to move student thinking forward. (See examples of the teacher challenging students in video segments 19:58, 21:10, 21:25,</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p data-bbox="848 427 1249 483">Lesson Analysis: Analyze Strategy 6 and Reflect</p> <p data-bbox="848 496 926 516">Analyze:</p> <ul data-bbox="863 529 1268 626" style="list-style-type: none"> • What student thinking is revealed by engaging students in using and applying new science ideas? By providing a claim, evidence, and reasoning? <p data-bbox="848 634 919 654">Reflect:</p> <ul data-bbox="863 667 1241 712" style="list-style-type: none"> • What did you learn about strategy 6 from watching and analyzing this video clip? 	<p data-bbox="1360 228 1923 285">22:32, 22:37, 22:41, 23:17, 23:26, 24:35, 24:44, 24:46, 24:50, 25:05, and 25:20.)</p> <p data-bbox="1331 321 1919 378">Note: For examples of strategy 6, see PD Leader Master: 5th-Grade Guide to Video Clips for Day 4.</p> <p data-bbox="1331 415 1866 472">Display Slide 12. Lesson Analysis: Analyze Strategy 6 and Reflect (25 min)</p> <p data-bbox="1331 540 1944 654">a. Individuals: “For the analysis question on the slide, study the video transcript and come up with a claim, evidence, and reasoning to support your claim.”</p> <p data-bbox="1331 678 1944 889">b. Whole-group share-out: As participants share their claims, evidence, and reasoning, encourage them to challenge one another by asking questions, disagreeing, and suggesting improvements or alternative explanations and arguments. (Refer to the norms at the heart of the RESPeCT program.)</p> <p data-bbox="1360 911 1938 1024">Note: You may also want to ask participants whether they noticed in the transcript any missed opportunities for engaging students in using and applying new science ideas.</p> <p data-bbox="1331 1049 1913 1097">c. Reflect (1 min): Give participants time to think about the reflection question on the slide.</p> <p data-bbox="1331 1122 1938 1235">d. Whole-group discussion: Discuss the reflection question as a group. Make sure participants note specifically what they learned about strategy 6 from watching and analyzing this video clip.</p> <p data-bbox="1331 1276 1927 1357">Note: For examples of strategy 6, see PD Leader Master: 5th-Grade Guide to Video Clips for Day 4.</p>

10:55–12:00 65 min Water Cycle Lesson Plans Review Slides 20–24	<p>Purpose</p> <ul style="list-style-type: none"> Understand why the Water Cycle lesson plans are so scripted and how they should be used before and during the lessons. Understand the conceptual flow within and across the Water Cycle lessons. Understand the focus question, main learning goal, and main activity in each lesson. Understand how STL strategies 1–6 are embedded in the lessons. <p>Content</p> <ul style="list-style-type: none"> All lessons are designed to support the science content storyline within and across 	 <p>The table shows the school-year plan for the RESPeCT PD program. It is divided into Summer Institute, Fall Study-Group Sessions, and Spring Study-Group Sessions. Summer Institute includes content deepening on Water Cycle and Food Webs, and lesson analysis on the STeLLA framework. Fall sessions focus on Food Webs, and Spring sessions focus on Water Cycle. Each session includes teaching rounds and study-group activities.</p>	<p>Display Slide 20. RESPeCT PD Program School-Year Plan (2 min)</p> <p>a. "Before we share our reports about each of the Water Cycle lesson plans and how they support you in practicing these Student Thinking Lens strategies, let's review the plan for the school year."</p> <p>b. "In the fall you'll teach the Food Webs lessons, and we'll meet in our study group to analyze video clips and student work from these lessons. This analysis will help us deepen our understandings of the STeLLA strategies, the science content, the lesson plans, and our students' thinking and learning."</p> <p>c. "Starting in January, you'll teach the Water Cycle lessons, and we'll meet in our study group to</p>

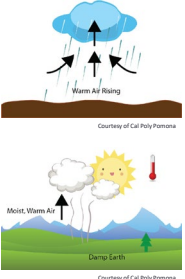

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
	<p>lessons. Each lesson contains a focus question, a main learning goal, and an activity.</p> <ul style="list-style-type: none"> The Student Thinking Lens strategies work together across lessons according to the following pattern: <ul style="list-style-type: none"> Elicit and probe strategies are very important in lesson 1. Probe and challenge strategies are used throughout all the lessons. Strategies 4 and 5 are highlighted in the middle lessons. Strategy 6 is highlighted toward the end of the lesson, after students encounter new science ideas but before final unit assessments. <p>What Participants Do</p> <ul style="list-style-type: none"> Review the plans for school-year study groups. Listen to the PD leader describe the lesson plans for the study groups and how they should be used/adapted. Present a summary of an assigned lesson plan to help their peers understand the lesson. Raise questions and concerns about the lesson plans and make suggestions. 	<p></p> <hr/> <p>The RESPeCT Lesson Plans as a Study Tool: Part 1</p> <p>The RESPeCT lesson plans are study tools designed to support your learning and for our study group to analyze.</p> <p>This has two implications.</p> <ol style="list-style-type: none"> These lessons don't represent a complete unit. You may need to add lessons to help your students achieve all the learning goals, and ... 	<p>analyze video clips and student work from these lessons. Do you have any questions?"</p> <p>d. Important reminder: "Remember that we're analyzing video clips of our own classroom teaching to help us all learn, not to evaluate and critique one another. Everyone is learning to use both new strategies and new lesson plans, so it's predictable that our first attempts at teaching these lessons will have rough spots. We need to appreciate and acknowledge the courage each of us is demonstrating in sharing our initial efforts to teach these lessons. Please be assured that our analyses of the videos will focus on the strategies, the science content, and most importantly, how students are making sense of the lessons. We're not going to focus on rough spots or management problems. We're here to support one another and to learn and grow as science teachers."</p> <hr/> <p>Display Slide 21. The RESPeCT Lesson Plans as a Study Tool: Part 1 (1 min)</p> <ol style="list-style-type: none"> Read through the information on this slide. 		<p>Reflect: Content Deepening Focus Question 1</p> <p>What are the two basic steps of cloud formation?</p> <p><small>Link to video clip at https://www.thehappyscientist.com/content/cloud-formation-part-1.</small></p>	<p>Display Slide 36. Reflect: Content Deepening Focus Question 1</p> <p>PD leader talk: “Next we’ll watch a video clip to see if we can find common ground on this topic.”</p> <p>PD leader move: After participants have viewed the clip, ask them to reflect on the focus question and consider how the video has influenced their thinking about cloud formation.</p>
		<p>Content Deepening: Focus Question 2</p> <p>How does the process of distillation simulate the overall water cycle (lesson 5)?</p>	<p>Display Slide 37. Content Deepening: Focus Question 2</p> <p>PD leader move: Read the focus question on the slide.</p> <p>PD leader talk: “Now we’re going to build on our previous knowledge as we learn about the process of distillation. This content deepening will support our ability to elicit, probe, and challenge student thinking that will be made visible during the actual lesson.”</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Distillation</p> <ul style="list-style-type: none"> Distillation is the process of heating a liquid until it boils, and then condensing and collecting the resulting hot vapors. The principles of distillation have been used for thousands of years. Ancient Arab chemists may have been the first to use distillation to isolate perfumes. In modern organic chemistry, distillation is a powerful tool not only for identifying organic compounds but also for purifying them. The boiling point of a compound is one of the physical properties used to identify it. The thermometer wasn't invented until the early 1700s. 	<p>Display Slide 38. Distillation</p> <p>PD leader talk: “For thousands of years, distillation was a common tool used to identify and purify a compound in organic chemistry well before the modern thermometer was invented.”</p>
		<p>Distillation Apparatus</p> <ul style="list-style-type: none"> Draw this distillation apparatus in your science notebooks. When the water in this system has heated to a boil, what happens to the water-vapor molecules the farther they rise from the heat source? 	<p>Display Slide 39. Distillation Apparatus</p> <p>Note: Hide the question on the PPT slide until participants have finished their drawings.</p> <p>PD leader talk: “Displayed here is a distillation apparatus consisting of an Erlenmeyer flask, water, a stopper, aquarium tubing, and a collection tube.”</p> <p>PD leader move: As you assemble the apparatus and start heating the water, tell participants how the various parts of the apparatus are used.</p> <p>PD leader talk: “While we’re waiting for the water in the flask to reach a boiling point, I’d like you to draw the apparatus in your notebooks. Make your drawings large because we’re going to add more details.”</p> <p>PD leader move: Ask participants to observe the water in the system.</p> <p>Note: Keep the heat low enough so the boiling water doesn’t distill into the collection tube. Once some condensation appears in the aquarium tubing, turn off the heat!</p> <p>PD leader move: After participants have finished</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>their drawings, reveal the question on the slide.</p> <p>PD leader talk: “Now that your drawings are complete and our system has been heated, explain what happens to the water-vapor molecules as they rise from the heat source.”</p> <p>PD leader move: Participants should observe that the water-vapor (gas) molecules lose heat energy (cool) and slow down as they move to the top of the beaker and enter the tubing. Don’t discuss what is happening beyond the entrance to the tubing.</p>
		<p>Distillation Apparatus</p> <ul style="list-style-type: none"> • How does this loss in energy eventually affect the movement and arrangement of the water molecules? • Add to your diagram by drawing water molecules in their various states. 	<p>Display Slide 40. Distillation Apparatus</p> <p>Note: Hide the instruction at the bottom of the PPT slide until participants have responded to the question.</p> <p>PD leader talk: “How does this loss of heat energy eventually affect the movement and arrangement of the water molecules?”</p> <p>PD leader move: Participants should explain that the gas (water-vapor) molecules lose kinetic (heat) energy in the cooler environment, slow down, and undergo a phase change from a gas to liquid-water droplets through condensation.</p> <p>Note: Don’t mention cloud formation yet!</p> <p>PD leader move: After this discussion, display the instruction at the bottom of the slide.</p> <p>PD leader talk: “Now I’d like you to add to your diagrams by drawing water molecules in their various states.”</p> <p>PD leader move: Be sure participants show the liquid-water molecules forming hydrogen bonds in the tubing.</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>A Model of Cloud Formation</p> <ul style="list-style-type: none"> • How does the first section of the distillation apparatus simulate cloud formation? • Similar to steam, clouds form when water molecules condense onto dust particles in the air.  <p><small>Photo courtesy of Pixabay.com</small></p>  <p><small>Courtesy of Cal Poly Pomona</small></p>	<p>Display Slide 41. 		<p>The Water Cycle</p> <p>Water is abundant in our environment. The movement and arrangement of water molecules as they gain and lose energy is fascinating and dynamic!</p>  <p>How might students draw and label a diagram showing how water molecules interact in the water cycle?</p>	<p>Display Slide 45. The Water Cycle</p> <p>PD leader talk: “As we’ve observed in our demonstrations and experiments, water is abundant in our environment. The movement and arrangement of water molecules when they gain and lose energy is fascinating and dynamic!”</p> <p>PD leader talk: “Our overall goal this week has involved using science ideas about the nature of water molecules to explain the phenomena of the water cycle. How might students draw and label a diagram showing how water molecules interact in the water cycle?”</p> <p>PD leader move: As participants share their ideas, draw and label a sample diagram on chart paper.</p> <p>Note: You may also want to display a marked copy of the Water in the World around Us diagram (handout 5.3) from Water Cycle lesson 5b in the lesson plans binder.</p>
<p>3:15–3:30</p> <p>15 min</p> <p>Wrap-Up: Summary, Homework, and Reflections</p>	<p>Purpose</p> <ul style="list-style-type: none"> Summarize and reflect on key ideas from today’s learning and preview the transition to the Science Content Storyline Lens (SCSL) strategies. <p>What Participants Do</p> <ul style="list-style-type: none"> Review today’s focus questions. Share key ideas from the lesson analysis (strategy 6), lesson plan 	<p>Today’s Focus Questions</p> <ul style="list-style-type: none"> Why is it necessary to engage students in using and applying new science ideas in a variety of ways and contexts? How will the Student Thinking Lens strategies help you teach the Water Cycle lessons? What are the two basic steps of cloud formation? How does the process of distillation simulate the overall water cycle? 	<p>Display Slide 46. Today’s Focus Questions (2 min)</p> <p>a. Review today’s focus questions.</p> <p>b. Individual think time (1 min): Ask participants to reflect on these questions and think about how they might revise their answers.</p>
