

RESPeCT Summer Institute Professional Development Leader Guide (PDLG)

Grade Level	5	Day	6	STeLLA Strategy	SCSL Strategies B, C, and I STL Strategy 7	Subject Matter Focus	Food Webs
Focus Questions	<ul style="list-style-type: none"> • How can we begin and end a lesson to help students develop a coherent science content storyline? • How can selecting appropriate science activities help students develop a coherent science content storyline? • How do plants get the food (matter and energy) they need to live and grow? • How do living things grow bigger? 						
Main Learning Goals	<p>Participants will understand the following:</p> <ul style="list-style-type: none"> • STeLLA strategies B, I, and 7 are like bookends that mark the beginning and end of a lesson. The science ideas in the summary should match the focus question from the beginning of the lesson, and both the focus question and the summary should match the lesson's main learning goal. • Activities should be selected because they will help students engage in making sense of the main learning goal, not because they're fun, easy to do, or only topically related. Therefore, activities must be closely matched to the main learning goal. • The feeding level that an organism occupies in a food web is its trophic level. Trophic levels include producers, primary consumers (herbivores), secondary consumers (small predators that are carnivores or omnivores), and top-level consumers (large predators that are carnivores or omnivores). • The process of photosynthesis converts carbon dioxide and water into sugars and released oxygen. • The sugars that photosynthesis produces can be used immediately or stored for growth or later use. • Most of the matter that plants use for growth comes originally from carbon dioxide and water. • The process of photosynthesis converts light energy to stored chemical energy in food molecules. • Organisms use some of the matter in food for growth—to build body structures. 						
Preparation			Materials			Videos	
<p>Daily Setup Tasks</p> <ul style="list-style-type: none"> • Check that video clips are correctly linked to PowerPoint (PPT) slides. • Set up PowerPoint. • Make sure video clips play correctly with good sound. • Arrange furniture and food. • Arrange participant materials. • Put up posters and charts. <p>Planning and Preparation Tasks</p> <ul style="list-style-type: none"> • Study the PDLG, PowerPoint slides (PPTs), video clips, and handouts. Make changes to PPTs if needed. 			<p>Posters and Charts</p> <ul style="list-style-type: none"> • STeLLA Framework and Strategies poster • Day-6 Agenda (chart) • Day-6 Focus Questions (chart) • Norms for Working Together (chart) • Strategy charts from days 1–5 (STL strategies 1–6 and SCSL strategy A) • Parking Lot poster <p>Handouts in RESPeCT PD Binder Front Pocket</p> <ul style="list-style-type: none"> • Participants' SCSL and STL Z-fold summary charts <p>Handouts in RESPeCT PD Binder, Day 6</p> <ul style="list-style-type: none"> • 6.1 Analysis Guides B and I: Setting the Purpose and 			<p>Video clips from one Food Webs lesson:</p> <ul style="list-style-type: none"> • Video Clip 6.1: McCabe classroom (strategy B, beginning of lesson); 6.1_role001-2-284-lvtf_300_mccabe_c2 • Video Clip 6.2: McCabe classroom (strategies I and 7, end of lesson); 6.2_role001-2-284-lvtf_300_mccabe_c3 <p>Video clips from another Food Webs lesson:</p> <ul style="list-style-type: none"> • Video Clip 6.3: Belcastro classroom (strategies B and C); 6.3_stella_FW_belcastro_L2_c1 • Video Clip 6.4: Belcastro classroom (strategy C); 	

<ul style="list-style-type: none"> Review the content deepening slides and determine the amount of time to allot for each slide based on the needs of your group. Add timing cues to PPTs, if desired, to help you stay on track. Review the reflections from day 5 and create a summary slide. Prepare charts for the day's agenda and focus questions. Watch video clips and read PD leader master guides for the McCabe and Belcastro clips. The analyses for the Belcastro clips are a little tricky, so make sure you understand how to use them effectively. The clips also include important opportunities to highlight STeLLA strategy 4 (engage students in analyzing and interpreting data and observations) and to help deepen participants' science-content knowledge. 	<p>Summarizing Key Science Ideas (4 copies)</p> <ul style="list-style-type: none"> 6.2 Transcript for Video Clip 6.1 6.3 Transcript for Video Clip 6.2 6.4 Analysis Guide C: Selecting Activities Matched to the Learning Goal (4 copies; first copy lists main learning goal for Food Webs lesson 2) 6.5 Transcript for Video Clip 6.3 6.6 Transcript for Video Clip 6.4 6.7 Transcript for Video Clip 6.5 6.8 Transcript for Video Clip 6.6 6.9 Practice: Is the Activity Matched to the Main Learning Goal? 6.10 Daily Reflections—Day 6 <p>Handouts in RESPeCT Lesson Plans Binder</p> <ul style="list-style-type: none"> 2.1 What Is Food for Plants? Strategies B, I, and 7: Purposes and Key Features (25 min)</p> <p>a. Pairs (3 min): Direct participants to retrieve their Z-fold summary charts and share with a partner what they learned from their homework assignment about STeLLA strategies B, I, and 7.</p> <p>b. Small groups (12 min): Divide participants into three small groups and have them make charts that capture the purposes and key features of the three strategies.</p> <p>Note: Challenge participants to imagine themselves in a Teacher Leader role. Ask them, “How would you explain these strategies to the teachers you’re leading?”</p> <p>c. Whole group (10 min): Have small groups share their charts in a whole-group share-out.</p> <p>Key ideas:</p> <ul style="list-style-type: none"> Make sure participants understand that a focus question is designed to do more than

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
	<p>Videos</p> <ul style="list-style-type: none"> • Video Clip 6.1, McCabe classroom (beginning of lesson) • Video Clip 6.2, McCabe classroom (end of lesson) <p>Handouts in PD Binder</p> <ul style="list-style-type: none"> • 6.1 Analysis Guides B and I • 6.2 Transcript for Video Clip 6.1 • 6.3 Transcript for Video Clip 6.2 <p>PD Leader Masters</p> <ul style="list-style-type: none"> • PD Leader Master: 5th-Grade Guide to McCabe Video Clips for Day 6 <p>Supplies</p> <ul style="list-style-type: none"> • Science notebooks • Chart paper and markers <p>PD Resources</p> <ul style="list-style-type: none"> • STeLLA strategies booklet • RESPeCT lesson plans binder • Participants' SCSL and STL Z-fold summary charts (front pocket of PD binder) 	<p style="background-color: #cccccc; padding: 5px;">Discussion Questions: Strategy B</p> <ol style="list-style-type: none"> 1. What is the difference between focus questions and goal statements? 2. Which do you think would be more useful in engaging student interest and making their thinking visible—focus questions or goal statements? 	<p>just get students interested in the lesson. It gets them thinking about a phenomenon or something else they've never thought about before. It also reveals important things about the knowledge and experiences they're bringing to the lesson, it conceptually situates the learning, and it's referred to throughout the lesson.</p> <ul style="list-style-type: none"> • STeLLA strategies B, I, and 7 are like bookends that mark the beginning and end of a lesson. The science ideas used in the summary should match the focus question from the beginning of the lesson, and both the focus question and the summary should match the lesson's main learning goal. <p>Display Slide 9. Discussion Questions: Strategy B (7 min)</p> <p>a. Whole group: Discuss the questions on the slide as a group.</p> <p>Key ideas:</p> <ul style="list-style-type: none"> • A focus question is designed to be answered using the lesson's main learning goal and supporting science ideas. A goal statement describes the main science idea to be learned. • Focus questions are always used in RESPeCT lesson plans because they're useful in engaging student interest, making their thinking visible, and eliciting initial ideas at the beginning of a lesson. When posed at the end of a lesson, focus questions challenge students to use new ideas developed during the lesson.

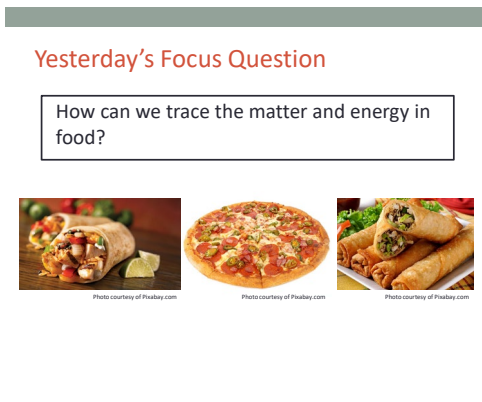

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p style="text-align: center;">Discussion Questions: Strategies 1 and 7</p> <ol style="list-style-type: none"> 1. What are various ways a lesson or unit can be synthesized and/or summarized? 2. How are strategies 1 and 7 similar and different? <ol style="list-style-type: none"> a. SCSL strategy 1: Summarize key science ideas. b. STL strategy 7: Engage students in making connections by synthesizing and summarizing key science ideas. 	<p>Display Slide 10. Discussion Questions: Strategies 1 and 7 (7 min)</p> <ol style="list-style-type: none"> a. Whole group: Discuss the first question on the slide. Participants can refer to the information on strategy 7 in the STeLLA strategies booklet to identify a variety of ways in which key science ideas in a lesson can be synthesized. b. Emphasize: “Toward the end of a unit, an entire lesson may be devoted to strategy 7, which engages students in synthesizing and summarizing science ideas across several lessons.” c. Discuss the second question on the slide. <p>Key ideas:</p> <ul style="list-style-type: none"> • In strategy 1, the <i>teacher</i> creates a summary of key science ideas in the lesson. Strategy 7, however, engages <i>students</i> in synthesizing and summarizing key science ideas in the lesson. When <i>students themselves</i> perform this work, it makes their thinking visible, engages them in active sensemaking, and reveals to the teacher any misunderstandings or gaps in knowledge. Using both strategies brings coherence to a science lesson and is a powerful way to end it. • In strategy 7, summarizing involves making connections between key science ideas, which helps students <i>synthesize</i> the main learning goal or big idea in a lesson. • Summaries should focus on key science ideas, not activities; that is, focusing on

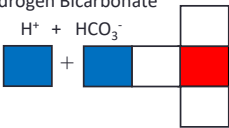

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>“what we <i>learned</i>” versus “what we <i>did</i>.”</p> <ul style="list-style-type: none"> For a variety of reasons, a lesson sometimes ends before the main learning goal has been fully developed. However, summarizing work should still take place. For example, the teacher might say, “Our focus question today was <i>How do plants get their food?</i> What have we found out so far?” After students respond, the teacher could reply, “Yes, so far we’ve discovered that water and soil aren’t food for plants. But we still haven’t figured out what <i>is</i> food for plants. We’ll continue working on this question next time.”
		<p>Video-based Lesson Analysis</p> <p>Next we’ll analyze two video clips from the beginning and end of a Food Webs lesson.</p>	<p>Display Slide 11. Video-based Lesson Analysis (Less than 1 min)</p> <p>a. Transition: This slide marks the transition to video-based lesson analysis.</p>

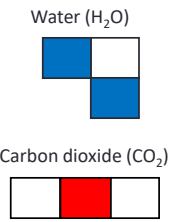

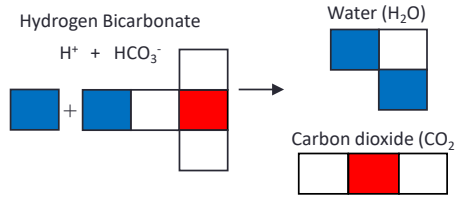

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Lesson Analysis: Strategy B</p> <ol style="list-style-type: none"> 1. In Analysis Guides B and I (handout 6.1), review the four criteria for strategy B: Setting the purpose. 2. Read the lesson context for the first video clip at the top of the transcript (handout 6.2). 3. Watch the video clip, keeping in mind the criteria for strategy B. 4. Analyze the transcript using the analysis guide. <ul style="list-style-type: none"> • <i>How well does the beginning of this lesson match the criteria for strategy B?</i> 5. Share and compare your analyses. <p>Link to McCabe Video Clip 6.1: 6.1_role001-2-284-lvtf_300_mccabe_c2</p>	<p>Display Slide 12. Lesson Analysis: Strategy B (20 min)</p> <ol style="list-style-type: none"> a. Have participants locate Analysis Guides B and I (handout 6.1 in PD program binder) and spend 1 or 2 minutes reading the criteria for strategy B: Setting the purpose. b. Ask: “Do you have any questions about these criteria?” c. Emphasize: “Keep the criteria for strategy B in mind as you watch the video clip from the beginning of a Food Webs lesson.” d. Individuals: Give participants a couple of minutes to read and think about the lesson context at the top of the video transcript (handout 6.2). e. Show the video clip. f. Whole group: “How well does the beginning of this lesson match the criteria for strategy B?” <p>Note 1: During the discussion, be on the lookout for opportunities to clarify science-content ideas.</p> <p>Note 2: For a sample analysis of the video clip using Analysis Guide B criteria, see PD Leader Master: 5th-Grade Guide to McCabe Video Clips for Day 6.</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Lesson Analysis: Strategy I</p> <ol style="list-style-type: none"> 1. In Analysis Guides B and I (handout 6.1), review the six criteria for strategy I: Summarizing key science ideas. 2. Read the lesson context for the second video clip at the top of the transcript (handout 6.3). 3. Watch the video clip, keeping in mind the criteria for strategy I. 4. Analyze the transcript using the analysis guide. <ul style="list-style-type: none"> • <i>How well does the end of this lesson match the criteria for strategy I?</i> 5. Share and compare your analyses. <p>Link to McCabe Video Clip 6.2: 6.2_role001-2-284-ivtf_300_mccabe_c3</p>	<p>Display Slide 13. Lesson Analysis: Strategy I (20 min)</p> <ol style="list-style-type: none"> a. Allow participants 1 or 2 minutes to read the six criteria in the analysis guide for strategy I: Summarizing key science ideas. b. Ask: “Do you have any questions about these criteria?” c. Emphasize: “Keep the criteria for strategy I in mind as you watch the video clip from the end of the same Food Webs lesson.” d. Individuals: Give participants a couple of minutes to read and think about the lesson context at the top of the video transcript (handout 6.3). e. Show the video clip. f. Whole group: “How well does the end of this lesson match the criteria for strategy I? How well does the summary statement match the beginning of the lesson?” <p>Note: For a sample analysis of the video clip using criteria from Analysis Guide I, see PD Leader Master: 5th-Grade Guide to McCabe Video Clips for Day 6.</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p style="text-align: center;">Food Webs Lesson Plans: Reading and Analysis</p> <ol style="list-style-type: none"> 1. Examine the main learning goal, the lesson focus question, and the lesson summary for your assigned Food Webs lesson plan (parts A and B). 2. Answer these questions in your notebooks, keeping in mind the analysis-guide criteria for strategies B and I: <ul style="list-style-type: none"> • What do you notice? • What do you wonder about? 	<p>Display Slide 14. Food Webs Lesson Plans: Reading and Analysis (10 min)</p> <p>Note: This slide can be abridged or skipped if time is running short.</p> <ol style="list-style-type: none"> a. Read the instructions on the slide and assign a two-part lesson plan (parts A and B) to each participant. b. Ask participants if they have any questions about the assignment. c. Individual reading-and-analysis time (5 min): “Answer the slide questions in your notebooks, keeping in mind the analysis-guide criteria.” d. Whole-group discussion (5 min): Briefly discuss participants’ observations and questions for their assigned lesson plans. <p>Note: Participants should see a close match between the main learning goal, the lesson focus question, and the summary. However, also welcome critiques and suggestions for improvement. Just make sure critiques are based on good understandings of the strategies involved.</p>
<p>10:00–10:10 10 min</p>	<p>BREAK</p>		

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
<p>10:10–12:00 110 min</p> <p>Content Deepening: Food Webs</p> <p>Slides 15–44</p>	<p>Purpose</p> <ul style="list-style-type: none"> Deepen participants' science-content knowledge of how matter and energy in systems can be traced and how photosynthesis works. <p>Content</p> <ul style="list-style-type: none"> The feeding level that an organism occupies in a food web is its trophic level. Trophic levels include producers, primary consumers (herbivores), secondary consumers (small predators that are carnivores or omnivores), and top-level consumers (large predators that are carnivores or omnivores). The process of photosynthesis converts carbon dioxide and water into sugars and released oxygen. The sugars that photosynthesis produces can be used immediately or stored for growth or later use. Most of the matter that plants use for growth comes originally from carbon dioxide and water. The process of photosynthesis converts light energy to stored chemical energy in food molecules. 		<p>Display Slide 15. Content Deepening: Food Webs</p> <p>Note: Throughout this content deepening phase, refer as needed to the Food Webs Content Background Document and Common Student Ideas about Food Chains and Food Webs.</p> <p>PD leader move: This slide marks the transition to the content deepening work.</p> <p>Timing note: To keep things moving so you don't run out of time during this phase, adhere as closely as possible to the time you've allotted for each slide. If you're running short on time, you may need to abridge or skip some of the group discussion.</p>
			<p>Display Slide 16. Yesterday's Focus Question</p> <p>PD leader move: Remind participants of the content deepening focus question from the previous session.</p> <p>PD leader talk: "For review and to help you conceptualize an answer to this focus question, we're going to make a model that demonstrates what happens in a closed system during a chemical reaction."</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
	<p>What Participants Do</p> <ul style="list-style-type: none"> • Create a model representing what happens to matter in a closed system during a chemical reaction. • Compare and contrast two representations of photosynthesis. <p>Handouts in Lesson Plans Binder</p> <ul style="list-style-type: none"> • 2.1 What Is Food for Plants? (from Food Webs lesson 2a) <p>Supplies</p> <ul style="list-style-type: none"> • Science notebooks • Science-lesson materials kit for linking-cube activity (see overview page) • Materials for photosynthesis demonstration: <ul style="list-style-type: none"> • Green mixing bowl • Plastic baggie of CO₂ • Bottle of water • Flashlight • Hand-crank mixer or wire whisk • Sugar cubes <p>PD Resources</p> <ul style="list-style-type: none"> • RESPeCT lesson plans binder 	<p style="text-align: center;">The Alka-Seltzer Activity: A New Model</p> <ol style="list-style-type: none"> 1. Gather these linking cubes for the activity: 10 blue (hydrogen), 5 red (carbon), 15 white (oxygen). 2. Join the linking cubes to make 5 bicarbonate molecules, leaving 5 hydrogen atoms: <div style="text-align: center;"> <p>Hydrogen Bicarbonate</p> $\text{H}^+ + \text{HCO}_3^-$  </div>	<p>Display Slide 17. The Alka-Seltzer Activity: A New Model</p> <p>PD leader talk: “Gather the linking cubes you’ll need for this activity, as well as a piece of chart paper and a marker.”</p> <p>PD leader move: As participants assemble these materials, tell them that each of the linking cubes represents a specific “bit,” or atom, of matter. The model they’ll be making will include three types of atoms:</p> <ol style="list-style-type: none"> 1. Hydrogen atoms (blue linking cubes) 2. Oxygen atoms (white linking cubes) 3. Carbon atoms (red linking cubes) <p>PD leader talk: “One of the main components of Alka-Seltzer is sodium bicarbonate. As the tablet dissolves, the sodium bicarbonate breaks down to form bicarbonate ions, which react with hydrogen to form water and carbon-dioxide gas.”</p> <p>PD leader move: Demonstrate for participants how to construct the bicarbonate ions with the linking cubes.</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
	<p>Resources in Lesson Plans Binder</p> <p><i>Resources section:</i></p> <ul style="list-style-type: none"> • Content background document • Common Student Ideas 	<p>What Just Happened?</p> <ol style="list-style-type: none"> 1. Draw a big water bottle (with a cap) on chart paper. 2. Use the linking cubes to show what happened in the chemical reaction as the 5 hydrogen atoms and 5 bicarbonate molecules were rearranged to form carbon dioxide and water molecules. 3. Explain why the mass in the system stayed the same. 	<p>Display Slide 18. What Just Happened?</p> <p>PD leader talk: “Now I’d like you to work in small groups to complete the tasks on the slide.”</p> <p>PD leader move: Have each small group demonstrate how the bicarbonate ions break down to form water and carbon dioxide. Ask probe and challenge questions to move participants’ thinking forward.</p> <p>PD leader move: Following the activity, hold a brief whole-group discussion about what happened during the reaction.</p> <p>PD leader talk: “Why do you think the mass in the system stayed the same?”</p> <p>Answer: None of the bits of matter left the system, so the mass stayed the same. New molecules were formed when these bits of matter changed partners, but the matter was still matter. None of it disappeared or was destroyed in the reaction.</p>
		<p>Alka-Seltzer and Burning Food</p> <p>How does the Alka-Seltzer activity relate to burning food?</p> <p>Hydrogen Bicarbonate</p> $H^+ + HCO_3^-$ 	<p>Display Slide 19. Alka-Seltzer and Burning Food</p> <p>PD leader move: Briefly discuss the question on the slide, emphasizing that in both reactions (Alka-Seltzer and the burning food), carbon dioxide (CO₂) and water (H₂O) were released, and mass was conserved. So all the bits of matter (linking cubes, or atoms) that were present at the beginning of each activity were</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>still there at the end.</p> <p>Note: Most participants won't recognize this, but in both reactions, thermal energy was also released.</p> <p>PD leader talk: "When the food burned, most of the matter in the food underwent a chemical change, and carbon dioxide and water were released. If the food in a person's body burned, carbon dioxide would be exhaled, and the person would lose mass, since a body isn't a closed system."</p>
	<p>Purpose</p> <ul style="list-style-type: none"> • Deepen participants' understandings of SCSL strategy C as they apply this strategy to the content deepening activities. 	<p>Did the Activity Match the Learning Goals?</p> <ol style="list-style-type: none"> 1. How did the Alka-Seltzer activity connect to these learning goals from yesterday's content deepening work? <ul style="list-style-type: none"> • Matter is conserved in chemical reactions. • All the matter in a closed system remains in the system and can be traced. 2. How closely did the activity match these goals? 	<p>Display Slide 20. Did the Activity Match the Learning Goals?</p> <p>PD leader move: Read the content deepening learning goals on the slide and briefly discuss the question to help participants build connections between the science content and the activities.</p> <p>PD leader talk: "Did the Alka-Seltzer activity match these learning goals?"</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Review: What Is NOT Food?</p> <p>Name something that living things take into their bodies that is NOT food according to the scientific definition (but your students may think of as food).</p> <p>Be ready to give a reason for your choices.</p>	<p>Display Slide 21. Review: What Is NOT Food?</p> <p>PD leader move: Read the instructions on the slide. Mention that this activity comes from lesson 2a of the Food Webs unit, and the next segment of the content deepening phase will follow that lesson somewhat closely.</p> <p>PD leader talk: “Work individually for 1 or 2 minutes on this task. Make sure to name an item that is not considered food according to the scientific definition but may be something your students think of as food.”</p> <p>Note: If participants need to review the scientific definition of <i>food</i>, show the next slide.</p> <p>PD leader move: Have participants share their responses with the group. Answers may include carbon dioxide, plant food, vitamins, diet sodas, or water.</p>
		<p>The Scientific Definition of Food</p> <p>Food is matter (building materials) that contains energy living things can use to live and grow, to heal wounds, and to keep all their parts working.</p>	<p>Display Slide 22. The Scientific Definition of <i>Food</i></p> <p>Note: Refer to this slide if participants need to review the scientific definition of <i>food</i> to complete the task on the previous slide.</p> <p>PD leader move: Have participants write this definition in their notebooks (if they didn't yesterday).</p>

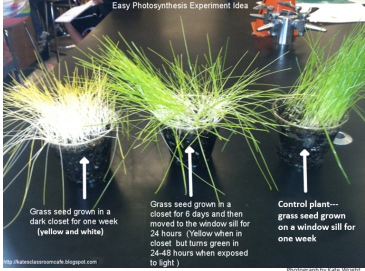

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Content Deepening: Focus Question 1</p> <p>How do plants get the food (matter and energy) they need to live and grow?</p>	<p>Display Slide 23. Content Deepening: Focus Question 1</p> <p>PD leader move: Introduce the first content deepening focus question for the session.</p> <p>PD leader talk: “Take a moment to write this focus question in your science notebooks.”</p> <p>PD leader talk: “Now let’s talk about how yesterday’s focus question (“How can we trace the matter and energy in food?”) relates to this focus question. How do these questions create a coherent science content storyline?”</p> <p>Note: This focus question appeared in an earlier version of lesson 2 and doesn’t reflect the current lesson plan.</p>
		<p>How Do Plants Get the Food They Need to Live and Grow?</p>  <p><small>Photo courtesy of Pinterest.com</small> <small>Photograph by Jean-Pol Grandmont</small></p>	<p>Display Slide 24. How Do Plants Get the Food They Need to Live and Grow?</p> <p>PD leader talk: “The large oak tree on this slide grew from a tiny acorn.”</p>

		<p>Photosynthesis Demonstration</p> 	<p>Display Slide 36. Photosynthesis Demonstration</p> <p>PD leader move: Perform the demonstration from Food Webs lesson 2b described below. Alternatively, you could have participants review the procedure in the lesson plan, and a volunteer could lead the group through the demonstration.</p> <p>PD leader talk: “Scientists have learned that</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
			<p>water, carbon dioxide, and sunlight are <i>not</i> by themselves food for plants. But plants can do something with these two kinds of matter (water and carbon dioxide) and one form of energy (sunlight). Here's one way of imagining what is happening inside a plant.</p> <p>“This green bowl represents a plant leaf. The leaf takes in water from the roots. Can someone pour some water into this leaf? The leaf also takes in carbon dioxide from the air that enters through tiny holes in the leaf. I have a baggie filled with air that contains carbon dioxide. Can someone give the leaf some carbon dioxide?”</p> <p>“Now we need someone to be the Sun and shine this flashlight on the leaf. When water, carbon dioxide, and sunlight come together, an amazing set of chemical reactions take place in the leaf. I'll represent those chemical reactions with this mixer. The plant rearranges the bits of carbon dioxide and water and changes them into sugar, which contains both matter and a new form of stored energy that we call <i>food energy</i>. [<i>Show some sugar or sugar cubes.</i>]</p> <p>“So carbon dioxide by itself isn't food for plants, water by itself isn't food for plants, and sunshine by itself isn't food for plants. But the plant can take these three things and <i>make or produce</i> food. This is why scientists call plants <i>producers</i>.”</p> <p>PD leader move: Tell participants this process is called <i>photosynthesis</i>.</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p style="text-align: center;">The Role of Chloroplasts in Photosynthesis</p> <p style="text-align: center;">Leaves contain millions of chloroplasts.</p>  <p style="text-align: center;">Chloroplasts are highly structured, membrane-rich organelles.</p> <p style="text-align: right;">Chloroplasts</p> <p style="text-align: right;"><small>Photographs courtesy of Pixabay.com and Wikimedia.org</small></p>	<p>Display Slide 37. The Role of Chloroplasts in Photosynthesis</p> <p>PD leader move: Briefly review some of the details of photosynthesis so participants have a stronger basis for understanding the model used in lesson 2b.</p> <p>PD leader talk: “Look at image 1 on the slide. If this leaf were magnified, you’d see that it’s made up of tiny cells, seen in image 2. Image 3 shows a close-up of one of these cells, which has a lot of green ovals inside it. Each of these ovals is called a <i>chloroplast</i>. Image 4 is a prototype version of a chloroplast, and image 5 was taken with a special instrument called a <i>transmission electron microscope</i>, which shows the membranes inside a chloroplast. All the complex reactions that take place during photosynthesis occur in the chloroplast.”</p>
		<p style="text-align: center;">Matter and Energy in Photosynthesis</p> <p style="text-align: center;">Photosynthesis is used to transform light energy into chemical-bond energy.</p> <p style="text-align: center;">CO₂ and H₂O and Light E → Carbohydrates (Sugars) and Oxygen</p> <p style="text-align: center;">from from from Air Soil Sun</p>	<p>Display Slide 38. Matter and Energy in Photosynthesis</p> <p>PD leader talk: “For photosynthesis to occur, plants need both matter and energy. Carbon dioxide from the air and water from the soil supply the matter, and sunlight provides the energy. When light energy from the Sun is present, plants convert the carbon dioxide and water into carbohydrates (sugars) and oxygen in a chemical reaction. Sugars make plants bigger and are also a source of energy.”</p>

		<p style="text-align: center;">Plants Are Producers That Make Food!</p> 	<p>Display Slide 43. Plants Are Producers That Make Food!</p> <p>PD leader move: First ask participants to compare and contrast the two representations of photosynthesis. (Switch back and forth between this slide and the previous slide as needed.)</p> <p>PD leader move: Highlight the following similarities and differences between the two representations of photosynthesis:</p> <ul style="list-style-type: none"> • In both diagrams, matter that doesn't provide energy for living things is converted to matter that has stored energy living things can use. • The first diagram relies on words in an equation to make this point, while the second uses an image of plant leaves with labels and arrows to describe what happens during photosynthesis. • In the first diagram, students may not recognize that the sugars (food molecules) a plant produces are part of the plant itself. In the second diagram, this is clearer; however, it's less clear that a set of chemical reactions lead to the formation of food molecules (sugar) and oxygen. <p>PD leader talk: "What are the strengths and weaknesses of each representation?"</p> <p>Note: Discussing content representations and engaging participants in their use foreshadows STeLLA strategy D, which will be the focus of the next session.</p>

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p>Did the Activity Match the Learning Goal?</p> <ol style="list-style-type: none"> How did the investigations connect to these learning goals? <ul style="list-style-type: none"> The process of photosynthesis converts carbon dioxide and water into sugars and released oxygen. Most of the matter that plants use for growth comes originally from carbon dioxide and water. The process of photosynthesis converts light energy to stored chemical energy in food molecules. How closely did these activities match the learning goals? 	<p>Display Slide 44. Did the Activity Match the Learning Goals?</p> <p>PD leader move: To help participants build connections between the science content and the activities, read the learning goals on the slide and briefly discuss how well the investigations matched these goals.</p>

		<p>What Happens to Matter in a Food Chain?</p> <p>First, let's create a model that shows how plants grow. Follow the steps in lesson 3a.</p> <ol style="list-style-type: none"> 1. Use linking cubes to make 20 carbon-dioxide (CO_2) molecules, 10 water (H_2O) molecules, and 4 food (sugar) molecules. 2. Place one food molecule on the tree. 3. Place the carbon-dioxide molecules in the air surrounding the tree, and the water molecules in the soil near the tree. 4. Hold up one CO_2 molecule and one H_2O molecule to the light for energy. 5. Keep building food molecules and placing them on the tree until you run out.  <p>Carbon-Dioxide Molecule (CO_2)</p>  <p>Water Molecule (H_2O)</p>  <p>Food Molecule (Sugar)</p>	<p>Display Slide 56. What Happens to Matter in a Food Chain?</p> <p>PD leader move: Guide participants through this activity from Food Webs lesson 3a. To model plant growth for participants, demonstrate what the three types of molecules should look like based on the slide images. Make 20 linking-cube carbon-dioxide molecules, 10 linking-cube water molecules, and 4 linking-cube food/sugar molecules.</p> <p>PD leader talk: “Turn to the section in lesson 3a where this activity appears in your lesson plans binder. Then follow the steps to show how plants grow.”</p> <ol style="list-style-type: none"> 1. Place one food molecule on the tree poster/place mat. This baby tree is made up of food molecules, but not a lot of them. 2. Place the CO_2 molecules in the air surrounding the tree. 3. Place water molecules in the soil on the poster/place mat. 4. Take one CO_2 molecule and one water molecule and hold them together up toward the light (the Sun) to get energy. With this energy from the Sun, take the CO_2 and H_2O molecules apart and then rearrange the cubes to build sugar molecules. <i>Emphasize</i> that energy is now stored in the links between each of the cubes. The food molecules have stored energy. 5. As you build food molecules, place them

PD Model: Time/Phase	Purpose, Content, and What Participants Do	Slides	Process
		<p data-bbox="856 769 1234 792">What Happens to Matter in a Food Chain?</p> <p data-bbox="856 813 1241 857">Do you think animals grow bigger by making their own food like plants do?</p> <p data-bbox="856 873 1264 943">Let's use our organism place mats to show how animals grow bigger as matter moves from organism to organism in a food chain.</p>	<p data-bbox="1402 233 1850 354">on the tree poster/mat. The tree gets bigger by making more and more food molecules and using them as building blocks for its body structures.</p> <p data-bbox="1373 367 1877 456">6. Keep going through this process of building food molecules and growing the tree until you run out of linking cubes.</p> <p data-bbox="1325 480 1892 695">Note: A simplified version of a food molecule is used in this model to make the science content easier for students to grasp. In reality, a glucose or sugar molecule has a chemical formula of $C_6H_{12}O_6$ (which means there are 6 carbon atoms, 12 hydrogen atoms, and 6 oxygen atoms in one glucose molecule).</p> <p data-bbox="1325 729 1892 789">Display Slide 57. What Happens to Matter in a Food Chain?</p> <p data-bbox="1325 857 1885 943">PD leader talk: "Do you think animals can grow by making their own food molecules like plants do?"</p> <p data-bbox="1325 980 1885 1101">PD leader move: Emphasize that the answer to this question is no. Then demonstrate how animals grow bigger by guiding participants through these steps from lesson 3b:</p> <ol data-bbox="1373 1133 1885 1416" style="list-style-type: none"> 1. To show how the squirrel gets bigger, let's imagine the squirrel eating some of the nuts on this tree. When it does this, it takes food molecules the tree made and adds these molecules to its own body to grow bigger. 2. To model how the squirrel grows bigger by using this matter, move some food molecules from the tree to the squirrel.

Have participants locate handout 6.9 in their PD binders (Practice: Is the Activity Matched to the Main Learning Goal?).</p> <p data-bbox="1325 776 1892 899">b. Individuals (2–3 min): “Think about how well the activities on the handout are matched to the main learning goal. Be prepared to give a rationale for your answers.”</p> <p data-bbox="1325 919 1843 977">c. Whole group: Invite participants to share their ideas and reasoning with the group.</p> <p data-bbox="1325 997 1535 1023">Ideal responses:</p> <ul data-bbox="1373 1039 1892 1409" style="list-style-type: none"> • Activity 1—Burning peanut: Partially matched or not matched to the learning goal. This activity addresses the idea that when food is used (burned), it gives off heat energy. But it doesn’t address what happens to food inside organisms. To more closely match the activity with the learning goal, the teacher could ask, “What do you think will happen when a squirrel or a person eats a peanut?” • Activity 2—Ocean food-chain diagram: Matched to all aspects of the learning

			<p>goal. This is the activity in the Food Webs lesson series.</p> <ul style="list-style-type: none"> • Activity 3—String food web: Partially matched to the learning goal. This activity focuses only on energy moving from one organism to another in a food chain. It doesn't address how each organism uses energy for life functions, or that energy is released as heat but is not recycled. The teacher could more closely match this activity to the main learning goal by adding the Sun to the food web and focusing only on what is happening to the light energy and food energy. However, it's difficult to imagine how this string representation could demonstrate in an accurate and meaningful way that energy is given off as heat but is not recycled.
<p>3:15–3:30 15 min</p> <p>Wrap-Up: Summary, Homework, and Reflections</p> <p>Slides 69–72</p>	<p>Purpose</p> <ul style="list-style-type: none"> • Summarize and reflect on key ideas about STeLLA strategies B, I, 7, and C, and the Food Webs science content. <p>What Participants Do</p> <ul style="list-style-type: none"> • Review today's focus questions. • Share key ideas about strategies B, I, 7, and C from the lesson analysis and content deepening work. • Copy down the homework 	<p>Today's Focus Questions</p> <ol style="list-style-type: none"> 1. How can we begin and end a lesson to help students develop a coherent science content storyline? 2. How can selecting appropriate science activities help students develop a coherent science content storyline? 3. How do plants get the food (matter and energy) they need to live and grow? 4. How do living things grow bigger? 	<p>Display Slide 69. Today's Focus Questions (Less than 1 min)</p> <p>a. Remind participants of today's focus questions.</p>
