SCIENCE, TECHNOLOGY, AND SOCIETY

AI ETHICS & SOCIETY PROGRAM

- Discover how tech and society shape each other—past, present, and future
- Consider how AI connects with identity, culture, and social change
- Learn how AI works and why it matters—ethically, politically, globally
- Join the movement shaping the rules, values, and systems of tomorrow

OUR PROGRAM

Cal Poly
Pomona

College of Letters, Arts,
and Social Sciences

The Artificial Intelligence (AI) Ethics & Society is an option of the Science, Technology, and Society (STS) major. In this program, you'll learn to evaluate both the benefits and potential harms of AI—especially as the tech evolves faster than the rules that govern it. While the advantages of AI may seem immediate, the long-term risks often go unnoticed. This program gives you the tools to stay ahead of that curve, combining insights from ethics, culture, and policy with a solid grounding in technology.

You'll dive deep into the real-world impacts of AI and propose policies that support innovation while protecting society. It's a chance to not just study the future—but shape it.

BIG QUESTIONS NEED BIGGER PERSPECTIVES

AI isn't some far-off future—it's already shaping how we live, work, and make decisions.

The AI Ethics & Society Program brings together computer science, the humanities, and the social sciences to help you tackle the real-world challenges AI is creating. It goes beyond the tech itself to look at the bigger picture: How do we handle algorithmic bias? What about AI's impact on the environment? How do we safely use AI to accomplish long term goals?

These aren't problems technology can solve alone. Solving them takes critical thinking, ethical reflection, and the ability to navigate competing values.

AFTER GRADUATION

Whether you're aiming for a career in tech companies, government, consulting, law, or public interest advocacy, the AI Ethics & Society program gives you a powerful edge.

It's designed for students who don't just want to use AI—they want to understand its impact, shape how it's used, and influence the policies around it.

With a mix of ethics, communication, and big-picture thinking, you'll be ready for careers or grad school in a world where AI is everywhere.

AMAZING EXPERIENCES

- Capstone and Senior Project
- Student RSCA Conference
- Projects Hatchery program
- AI Hackathon
- and more...
