

## **Pre-Public Health Advising Sheet**

Public health consists of various specialty areas that address the physical, mental and environmental health concerns of communities and populations at risk for disease and injury. Public health is a field open to all undergraduate students in a variety of majors, from biological sciences to social sciences. The master's in public health degree (MPH) is a professional health degree that is oriented towards practice in public health settings such as careers as practitioners of public health in traditional health departments, managed care organizations, community-based organizations, hospitals, consulting firms, international agencies, state and federal agencies, among others. Many institutions now only require a baccalaureate degree or equivalent from an accredited institution. Most have the common prerequisites below. Check with the program website.
