Close Encounters with Chemicals

- We encounter chemicals almost every day
  - Filling your vehicle with gasoline
  - Cleaning the bathroom
  - Applying pesticides or insecticides
  - At work: Laboratory Chemicals, White Board Markers, White Board Cleaners, Copier Toner, Batteries, etc and possible exposure to paint, bathroom cleaners, etc.

- Many chemicals can cause injury or illness if not handled properly.
Hazard Communication ‘Goals’

- Right to Know chemical hazards
- PPE, first aid, spills/leaks
- Labels, Material Safety Data sheets
- Program Responsibilities
- Quiz

Right to Know

- OSHA created the Hazard Communication Standard to help ensure your safety when working with hazardous chemicals.
- You have a **RIGHT TO KNOW** about the hazardous chemicals you use on the job and how to work safely with those chemicals.
Hazard Communication Standard

Chemical manufacturers must:
- Determine a chemical’s hazards
- Provide labels and MSDSs

Employers must:
- Provide a hazard communication program
- Maintain MSDSs
- Train on hazardous materials

HazCom Standard (cont.)

Employees must:
- Read labels and MSDSs
- Follow employer instructions and warnings
- Identify hazards before starting a job
- Participate in training
**Chemical Hazards**

**Physical Hazards:**
- Flammable
- Explosive
- Reactive

**Health Hazards:**
- Corrosive
- Toxic

**Routes of Entry**
- Skin and eye contact
- Inhalation
- Swallowing
- Penetration (skin absorption)
Chemical Exposure

- Dosage
- Acute effects
- Chronic effects

Personal Protective Equipment

- Dust masks and respirators
- Glasses, goggles, and face shields
- Hearing protection
- Gloves
- Foot protection
- Head protection
- Aprons or full-body suits
Hazardous Materials First Aid

- Eyes: Flush with water for 15 minutes
- Skin: Wash with soap and water
- Inhalation: Move to fresh air
- Swallowing: Get emergency medical assistance

Spills and Leaks

- Evacuate the area
- Notify a supervisor or the emergency response team
- Remove ignition sources (if safe to do so)
- Stay away
Importance of Labels

- The identity of the chemical
- Name, address, and emergency phone number of the manufacturer
- Physical and health hazards
- Special handling instructions
- Basic PPE recommendations
- First aid, fire response, spill cleanup

NFPA Labeling Systems

NFPA = National Fire Protection Association

- Blue = Health
- Red = Flammability
- Yellow = Reactivity
- White = Other hazards or special handling

Scale: 0 (No Hazard) to 4 (Extreme Hazard)
Other Label Warnings

- The identity of the chemical
- Name, address, and emergency phone number of the manufacturer
- Physical and health hazards
- Special handling instructions
- Basic PPE recommendations
- First aid, fire response, spill cleanup

Material Safety Data Sheet Program

- Reading an MSDS
- MSDS locations
- Finding a specific MSDS
  - Vendor’s Representative or Web Site
  - List of Manufacturer Web Sites and Information
    http://www.csupomona.edu/~ehs/msds.html
  - MSDS Online at
    http://hq.msdsonline.com/csuedusl
Material Safety Data Sheets

- Chemical and manufacturer identity
- Hazardous ingredients
- Physical and chemical characteristics
- Fire, explosion, and reactivity

Material Safety Data Sheets (cont.)

- Health hazards
  - Routes of entry
  - Exposure levels (PEL or TLV)
  - Symptoms of exposure
  - First-Aid and emergency information
Material Safety Data Sheets (cont.)

- Personal Protective Equipment (PPE)
- Safe handling and storage
- Spills and leaks
- Compliance issues

Hazard Communication Summary

- Identify chemical hazards by reading labels and MSDSs
- Follow warnings and instructions, or ask your supervisor if in doubt
- Use the correct personal protective equipment
- Practice sensible, safe work habits
- Learn emergency procedures
Program Responsibilities

- **EH&S Department**
  - Develop, implement, and monitor the Program.
  - Provide general Hazard Communication Training.
  - Assist departments in complying with the program.
  - Maintain computerized inventory of hazardous substances and MSDSs on campus.

- **EH&S Department Continued**
  - Maintain master files of MSDSs.
  - Conduct periodic inspection to document the level of compliance.
  - Maintain all environmental monitoring, employee exposure, and employee medical records.
  - Provide access to these records to authorized individuals.
  - Review hazardous material donations to ensure that MSDSs are received.
Program Responsibilities

- Department & Principle Investigator (PI)
  - Develop local procedures to ensure effective compliance with the Hazard Communication.
  - Ensure that all requirements of the Hazard Communication Program have been met before employees are exposed to hazardous.
  - When ordering any suspected hazardous substances request an MSDS if needed.
  - Develop and maintain an inventory of hazardous substances present in all work areas within the department and maintain a current file of MSDSs.

- Department & Principle Investigator (PI) Continued
  - Conduct and certify that they have conducted an annual hazardous substance inventory and MSDS reconciliation.
  - Post in a conspicuous location for all employees the HAZARD COMMUNICATION NOTICE poster (http://www.csupomona.edu/~ehs/ftp/HazcomPoster.doc).
  - Develop methods to inform employees of the hazards of non-routine tasks and the hazards associated with unlabeled pipes in their work areas.
  - Develop methods as appropriate, to inform researchers, campus employees and outside employees who work in department areas and/or PI’s Laboratory of the hazardous substances to which they may be exposed.
Program Responsibilities

**Procurement**
- Request Vendor to provide MSDS on the Purchase Order.
- Provide EH&S a copy of all Purchase Orders that include any suspected hazardous materials.
- Receiving will send copies of the MSDSs with the shipment to the department ordering the material.
- Receiving will forward original MSDSs to EH&S.

**Employee**
- Must use common sense and good judgment at all times.
- Read and comply with all procedures, whether written or oral.
- Read and comply with information and instructions in the MSDS.
- Using appropriate Personal Protective Equipment
- Employees who must read and comply with this program and complete written documentation that this has been done.
Quiz

1. Chemical manufacturer’s must label containers and provide __________________________.
2. Employers should keep material safety data sheets in a locked file cabinet.   True or False
3. Dizziness, nausea, rashes, and respiratory irritation are signs of __________________________ exposure.
4. List three routes by which a chemical can enter the body: __________________________, __________________________, __________________________.
5. Household chemicals are never as hazardous as chemicals used at work.   True or False

Quiz (cont.)

6. On NFPA labels, a 4 in the red diamond indicates an extreme health hazard.   True or False
7. Typical first-aid for chemicals splashed in the eyes includes __________________________.
8. You will only know the health hazards and PPE requirements if you __________________________.
9. A __________________________ can be used to protect against breathing hazardous vapors or gases.
10. If you see a chemical spill, you should clean it immediately.   True or False
What is GHS?

- GHS stands for the Globally Harmonized System of Classification and Labeling of Chemicals.
  - It is the new standard for hazard communication that gives workers the “right to understand,” rather than the original 1983 standard that gave workers the “right to know.”
What are the benefits of GHS?

• GHS provides a harmonized system for classifying and identifying hazardous chemicals according to their physical, health and environmental hazards.
  – This newly defined system can be used and understood across international borders which improve the quality and consistency of hazardous information.
  – It also helps reduce worker confusion and improves their understanding of the information being provided.

Major Changes in GHS

• Labels will now include a signal word, pictogram, hazard statement, and precautionary statement for each hazard class and category.
• Safety Data Sheets require a new format with sixteen different sections to ensure consistency and are formally known as a Material Safety Data Sheet (MSDS).
Examples of other GHS Labels

These two labels illustrate the other formats that one can see when using hazardous chemicals.

Even though the layout is different than one previously displayed, the content still stays the same.
GHS Symbols & Hazard Classes

- Oxidizers
- Flammables
- Self Reactives
- Pyrophorics
- Self-Heating
- Emits Flammable Gas
- Organic Peroxides
- Explosives
- Self Reactives
- Organic Peroxides

GHS Symbols & Hazard Classes

- Acute Toxicity (severe)
- Corrosives
- Gases Under Pressure
GHS Symbols & Hazard Classes

- Carcinogen
- Respiratory Sensitizer
- Reproductive Toxicity
- Target Organ Toxicity
- Mutagenicity
- Aspiration Toxicity

- Environmental Toxicity

- Irritant
- Dermal Sensitizer
- Acute Toxicity (harmful)
- Narcotic Effects
- Respiratory Tract Irritation

GHS Safety Data Sheet

- The GHS Safety Data Sheet (SDS) provides comprehensive information on hazards in the workplace and offers advice on safety precautions.
- It has a format of sixteen defined sections to ensure consistency and understanding.
- A Safety Data Sheet is also formally known as a Material Safety Data Sheet or MSDS.
Sections 1-2 of a GHS SDS

• Section 1: Identification of the substance or mixture and of the supplier.
  – Section 1 should consist of a product identifier (the same one used on the GHS label), supplier or manufacture details, recommendations and restrictions of use, and an emergency telephone number.

• Section 2: Hazards identification
  – Consists of the GHS classification of the substance and/or mixture, as well as any national or local information.
  – GHS label elements, such as symbols (can be provided with the written name of the symbol or pictogram), precautionary statements and other hazards which are not covered by the GHS can also be provided in this section.

Sections 3-4 of a GHS SDS

• Section 3: Composition/Information on ingredients
  – Section 3 contains the chemical identity, common name and synonyms of the given substance and/or mixture. The chemical identity and concentration of all hazardous ingredients will be provided for all hazardous mixtures.
  – CAS numbers, EC numbers, impurities and stabilizing additives should also be provided in this section as well.

• Section 4: First aid measures
  – Consists of descriptions for necessary measures that are subdivided according to the most important symptoms/effects from different routes of exposure, such as, inhalation, skin and eye contact and ingestion.
Sections 5-8 of a GHS SDS

• Section 5: Firefighting measures
  – Consists of suitable extinguishing media and special protective equipment and precautions for firefighters, as well as any specific hazards arising from the chemical.

• Section 6: Accidental release measures
  – Includes personal precautions, protective equipment and emergency procedures. Environmental precautions, methods and materials for containment and cleaning up are available in this section as well.

• Section 7: Handling and storage
  – Section 7 contains precautions for safe handling and conditions for safe storage, including any incompatibilities with other chemicals.

Section 8 of a GHS SDS

• Section 8: Exposure controls/personal protection
  – Includes control parameters, such as, occupational exposure limits or biological limits. Appropriate engineering controls and individual protection measures, such as protective equipment is provided in this section as well.
Sections 9-12 of a GHS SDS

- Section 9: Physical and chemical properties
  - This section contains the physical and chemical properties, such as, appearance, odor, pH level, melting point/freezing point and flash point
- Section 10: Stability and reactivity
  - Contains information on the chemical stability and possible hazardous reactions.
- Section 11: Toxicological information
  - Consist of a full and clear description of various health effects and the information one needs to know in order to identify the side effects.
- Section 12: Ecological information
  - Includes any adverse effects on the environment such as ecotoxicity and degradability.

Sections 13-16 of a GHS SDS

- Section 13: Disposal considerations
  - Include a description of waste remains and information on safe disposal.
- Section 14: Transport information
  - Contains information such as the UN number, shipping name and the transport hazard class or classes.
- Section 15: Regulatory information
  - Consists of any specific regulations for the identified product.
- Section 16: Other information
  - Contains any other information, such as preparation and revision of the SDS.
APPENDICES

1. MSDS-Material Safety Data Sheet (AKA SDS- Safety Data Sheet) for Epoxy Adhesive
2. MSDS (New SDS- Safety Data Sheet Format) for Bromothymol Blue
3. NFPA Hazard Classification
4. GHS Labeling
Section 1
PACER TECHNOLOGY
9420 Santa Anita Avenue
Rancho Cucamonga, CA 91730

PRODUCT IDENTIFICATION:
Quick Setting Epoxy Adhesive - Part A: Resin

HAZARD RATING
1
2 x 0

Section 2 - HAZARDOUS INGREDIENTS INFORMATION:

<table>
<thead>
<tr>
<th>Hazardous Components</th>
<th>OSHA</th>

<tr>
<td>Bisphenol A/Epichlorohydrin based epoxy resin*</td>
<td>(25068-38-6)</td>
<td>NE</td>
<td>NE</td>
<td>NE</td>
</tr>
</tbody>
</table>

* This product is an epoxy resin produced by the condensation reaction of Epichlorohydrin and Bisphenol-A. These raw materials are consumed in the process. Residual levels of Epichlorohydrin are controlled to 1ppm, max., in the product.

Section 3 - PHYSICAL/CHEMICAL CHARACTERISTICS:
Boiling Point: >500°F
Specific Gravity (H2O=1): 1.16
Vapor Density (Air=1): NA
Melting Point: NE
Vapor Pressure (mm Hg): 0.03 @ 77°F
Evaporation Rate (Butyl Acetate = 1): NA
VOC: This product is VOC compliant for sale in California.
Solubility in Water: Negligible.
Appearance & Odor: Light yellow colored viscous liquid.

Section 4 - FIRE AND EXPLOSION HAZARD DATA:
Flash Point (Method Used): 480°F (PMCC)
Flammable Limits: LEL: NE  UEL: NE
Extinguishing Media: Water fog, foam, dry chemical or carbon dioxide.
Special Fire Fighting Procedures: Material will not burn unless preheated. Do not enter confined fire space without full bunker gear (helmet/face shield, bunker coat, gloves & rubber boats). Use positive pressure NIOSH-approved self-contained breathing apparatus. Cool fire exposed containers with water.
Unusual Fire and Explosion Hazards: Heating of resin above 300°F in presence of air may cause slow oxidative decomposition. Above 500°F polymerization may occur. Some curing agents, e.g. aliphatic amines can produce exothermic reactions which in large masses can cause runaway polymerization & charring of reactants. Fumes & vapors from these thermal & chemical decompositions vary widely in composition/toxicity. DO NOT BREATHE FUMES. Unidentified fumes & vapors may be toxic.

Section 5 - REACTIVITY DATA:
Stability: Unstable  XX  Stable
Conditions to Avoid: Keep away from open flames & high temperatures.
Incompatibility (Materials to Avoid): Strong oxidizing agents, strong Lewis or mineral acids, strong mineral & organic bases, esp. primary & secondary aliphatic amines.
Hazardous Decomposition Products: Carbon monoxide, aldehydes, acids & other organic substances may be formed during combustion (>500°F) temperature degradation.
Hazardous Polymerization: May Occur  XX  May Not Occur
(Avoid heating >300°F).
Section 6 - HEALTH HAZARD DATA:
Route(s) of Entry: Inhalation: YES  Skin: YES  Ingestion: YES

Health Hazards (Acute and Chronic):
Product moderately irritating to eyes, skin; contact with product at elevated temperatures can result in thermal burns; may cause skin sensitization; low order of acute oral toxicity noted; unlikely to be inhalation hazard due to low volatility.

Carcinogenicity: NTP: No  IARC Monographs: No  OSHA Regulated: No

Signs and Symptoms of Exposure & First Aid Procedures:
Eye contact - irritation: flush eyes with copious amounts of water for 15 min. while holding eyes open. Get medical attention immediately.
Skin contact - irritation/rash: remove contaminated clothing and wash with soap/water. Get medical attention if symptoms persist, (contaminated leather articles, i.e. shoes, should be disposed of as contaminated waste). NOTE: hot product burns require immediate medical attention.
Inhalation - Remove to fresh air and provide oxygen if breathing is difficult. Get medical attention.
Ingestion - Do not induce vomiting. In general, no treatment unless large amount is ingested; however, get medical advice.
NOTE TO PHYSICIAN: Emesis induction is normally not necessary in high viscosity, low volatility products, e.g. neat epoxy resins.

Medical Conditions Generally Aggravated by Exposure: Pre-existing eye/skin disorders or lung allergies.

Section 7 - PRECAUTIONS FOR SAFE HANDLING AND USE:
Steps to Be Taken in case Material is Released or Spilled: Product may burn although not readily ignitable. Use cautious judgment when cleaning up large spills. Respirator and protective equipment as appropriate. Dike and contain material. Soak up residue with absorbent (clay, sand) materials and dispose of properly.

Waste Disposal Method: If product becomes waste, not considered hazardous waste by RCRA criteria (40 CFR 261). Dispose of according to federal, state and local regulations.

Precautions to Be Taken in Handling and Storing: Store in cool, dry place away from open flames and high temperatures.

Other Precautions: Empty containers may contain product residues and should be disposed of properly.

Section 8 - CONTROL MEASURES:
Respiratory Protection (Specify Type): Organic vapor respirator in areas with poor ventilation.
Ventilation: Local Exhaust: Good  Mechanical (General): As needed.

Protective Clothing or Equipment: Safety glasses/goggles with side shields, chemically resistant gloves and other protective equipment to avoid direct contact.

Work/Hygienic Practices: Avoid contact with eyes or skin. Use in well ventilated area. Wash hands with soap and water after product use. Launder contaminated clothing before reuse and disposed of leather articles as contaminated waste.

Section 9 - OTHER:
Shipping - Non-Flammable – for Department of Transportation, DOT, purposes.
TSCA - All ingredients in this product are listed and comply with TSCA Requirements.
California Proposition 65 – No known ingredients in this product.

NA = Not applicable
NE = Not established

The data contained herein is based upon information that Pacer Technology believes to be reliable. Users of this product have the responsibility to determine the suitability of use and to adopt all necessary precautions to ensure the safety and protection of property and persons involved in said use. All statements or suggestions are made without warranty, express or implied, regarding accuracy of the information, the hazards connected with the use of the material or the results to be obtained from the use thereof.
1. PRODUCT AND COMPANY IDENTIFICATION

Product name : Bromothymol Blue
Product Number : 114413
Brand : Sigma-Aldrich
Supplier : Sigma-Aldrich
            3050 Spruce Street
            SAINT LOUIS MO  63103
            USA
Telephone : +1 800-325-5832
Fax : +1 800-325-5052
Emergency Phone # (For both supplier and manufacturer) : (314) 776-6555
Preparation Information : Sigma-Aldrich Corporation
            Product Safety - Americas Region
            1-800-521-8956

2. HAZARDS IDENTIFICATION

Emergency Overview
OSHA Hazards
No known OSHA hazards
Not a dangerous substance according to GHS.

HMIS Classification
Health hazard: 0
Flammability: 0
Physical hazards: 0

NFPA Rating
Health hazard: 0
Fire: 0
Reactivity Hazard: 0

Potential Health Effects
Inhalation : May be harmful if inhaled. May cause respiratory tract irritation.
Skin : May be harmful if absorbed through skin. May cause skin irritation.
Eyes : May cause eye irritation.
Ingestion : May be harmful if swallowed.

3. COMPOSITION//INFORMATION ON INGREDIENTS

Synonyms : 3',3''-Dibromothymol sulfonphthalein
Formula : C_{27}H_{28}Br_{2}O_{5}S
Molecular Weight : 624.38 g/mol

No ingredients are hazardous according to OSHA criteria.

4. FIRST AID MEASURES
If inhaled
If breathed in, move person into fresh air. If not breathing, give artificial respiration.

In case of skin contact
Wash off with soap and plenty of water.

In case of eye contact
Flush eyes with water as a precaution.

If swallowed
Never give anything by mouth to an unconscious person. Rinse mouth with water.

5. FIREFIGHTING MEASURES

Suitable extinguishing media
Use water spray, alcohol-resistant foam, dry chemical or carbon dioxide.

Special protective equipment for firefighters
Wear self contained breathing apparatus for fire fighting if necessary.

Hazardous combustion products
Hazardous decomposition products formed under fire conditions. - Carbon oxides, Sulphur oxides, Hydrogen bromide gas

6. ACCIDENTAL RELEASE MEASURES

Personal precautions
Avoid dust formation. Avoid breathing vapors, mist or gas.

Environmental precautions
Do not let product enter drains.

Methods and materials for containment and cleaning up
Sweep up and shovel. Keep in suitable, closed containers for disposal.

7. HANDLING AND STORAGE

Precautions for safe handling
Provide appropriate exhaust ventilation at places where dust is formed. Normal measures for preventive fire protection.

Conditions for safe storage
Keep container tightly closed in a dry and well-ventilated place.
Keep in a dry place.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Contains no substances with occupational exposure limit values.

Personal protective equipment

Respiratory protection
Respiratory protection is not required. Where protection from nuisance levels of dusts are desired, use type N95 (US) or type P1 (EN 143) dust masks. Use respirators and components tested and approved under appropriate government standards such as NIOSH (US) or CEN (EU).

Hand protection
Handle with gloves. Gloves must be inspected prior to use. Use proper glove removal technique (without touching glove’s outer surface) to avoid skin contact with this product. Dispose of contaminated gloves after use in accordance with applicable laws and good laboratory practices. Wash and dry hands.

Immersion protection
Material: Nitrile rubber
Minimum layer thickness: 0.11 mm
Break through time: > 480 min
Material tested:Dermatril® (Aldrich Z677272, Size M)

Splash protection
Material: Nitrile rubber
Minimum layer thickness: 0.11 mm
Break through time: > 30 min
Material tested: Dermatril® (Aldrich Z677272, Size M)

data source: KCL GmbH, D-36124 Eichenzell, phone +49 (0)6659 873000, e-mail sales@kcl.de, test method: EN374

If used in solution, or mixed with other substances, and under conditions which differ from EN 374, contact the supplier of the CE approved gloves. This recommendation is advisory only and must be evaluated by an industrial Hygienist familiar with the specific situation of anticipated use by our customers. It should not be construed as offering an approval for any specific use scenario.

Eye protection
Use equipment for eye protection tested and approved under appropriate government standards such as NIOSH (US) or EN 166(EU).

Skin and body protection
Choose body protection in relation to its type, to the concentration and amount of dangerous substances, and to the specific work-place., The type of protective equipment must be selected according to the concentration and amount of the dangerous substance at the specific workplace.

Hygiene measures
General industrial hygiene practice.

9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance
Form powder
Colour violet

Safety data
pH no data available
Melting point/freezing point Melting point/range: 200 - 202 °C (392 - 396 °F) - lit.
Boiling point no data available
Flash point no data available
Ignition temperature no data available
Autoignition temperature no data available
Lower explosion limit no data available
Upper explosion limit no data available
Vapour pressure no data available
Density no data available
Water solubility no data available
Partition coefficient: n-octanol/water no data available
Relative vapour density no data available
Odour no data available
Odour Threshold no data available
Evaporation rate no data available

10. STABILITY AND REACTIVITY

Chemical stability
Stable under recommended storage conditions.
Possibility of hazardous reactions
no data available

Conditions to avoid
no data available

Materials to avoid
Strong oxidizing agents

Hazardous decomposition products
Hazardous decomposition products formed under fire conditions. - Carbon oxides, Sulphur oxides, Hydrogen bromide gas
Other decomposition products - no data available

11. TOXICOLOGICAL INFORMATION

Acute toxicity

Oral LD50
no data available

Inhalation LC50
no data available

Dermal LD50
no data available

Other information on acute toxicity
no data available

Skin corrosion/irritation
no data available

Serious eye damage/eye irritation
no data available

Respiratory or skin sensitization
no data available

Germ cell mutagenicity
no data available

Carcinogenicity

IARC: No component of this product present at levels greater than or equal to 0.1% is identified as probable, possible or confirmed human carcinogen by IARC.

ACGIH: No component of this product present at levels greater than or equal to 0.1% is identified as a carcinogen or potential carcinogen by ACGIH.

NTP: No component of this product present at levels greater than or equal to 0.1% is identified as a known or anticipated carcinogen by NTP.

OSHA: No component of this product present at levels greater than or equal to 0.1% is identified as a carcinogen or potential carcinogen by OSHA.

Reproductive toxicity

no data available

Teratogenicity
no data available

Specific target organ toxicity - single exposure (Globally Harmonized System)
no data available

Specific target organ toxicity - repeated exposure (Globally Harmonized System)
no data available

**Aspiration hazard**
no data available

**Potential health effects**

- **Inhalation**
  May be harmful if inhaled. May cause respiratory tract irritation.

- **Ingestion**
  May be harmful if swallowed.

- **Skin**
  May be harmful if absorbed through skin. May cause skin irritation.

- **Eyes**
  May cause eye irritation.

**Synergistic effects**
no data available

**Additional information**
RTECS: Not available

---

**12. ECOLOGICAL INFORMATION**

**Toxicity**
no data available

**Persistence and degradability**
no data available

**Bioaccumulative potential**
no data available

**Mobility in soil**
no data available

**PBT and vPvB assessment**
no data available

**Other adverse effects**
no data available

---

**13. DISPOSAL CONSIDERATIONS**

**Product**
Offer surplus and non-recyclable solutions to a licensed disposal company.

**Contaminated packaging**
Dispose of as unused product.

---

**14. TRANSPORT INFORMATION**

**DOT (US)**
Not dangerous goods

**IMDG**
Not dangerous goods

**IATA**
Not dangerous goods

---

**15. REGULATORY INFORMATION**

**OSHA Hazards**
No known OSHA hazards

**SARA 302 Components**
SARA 302: No chemicals in this material are subject to the reporting requirements of SARA Title III, Section 302.

**SARA 313 Components**
SARA 313: This material does not contain any chemical components with known CAS numbers that exceed the threshold (De Minimis) reporting levels established by SARA Title III, Section 313.
SARA 311/312 Hazards
No SARA Hazards

# NFPA Hazard Classifications

**HEALTH HAZARD**  
(Blue Box)

- 4 Deadly
- 3 Extreme Danger
- 2 Hazardous
- 1 Slightly Hazardous
- 0 Normal Material

**FIRE HAZARD**  
(Red Box)

**Flash Points**
- 4 Below 73° F
- 3 Below 100° F
- 2 Above 100° F
- Not Exceeding 200° F
- 1 Above 200° F
- 0 Will Not Burn

**SPECIFIC HAZARD**  
(White Box)

- Oxidizer: OX
- Acid: ACID
- Alkali: ALK
- Corrosive: COR
- Use NO WATER: W
- Radioactive

**REACTIVITY**  
(Yellow Box)

- 4 May Detonate
- 3 Shock and Heat
- 2 Violent Chemical Change
- 1 Unstable If Heated
- 0 Stable
## HEALTH

4 Can cause death or major injury despite medical treatment.  
3 Can cause serious injury despite medical treatment.  
1 Can cause irritation if not treated.  
0 No hazard.

## FLAMMABILITY

4 Very flammable gases or very volatile flammable liquids  
3 Can be ignited at all normal temperatures.  
2 Ignites if moderately heated.  
1 Ignites after considerable preheating.  
0 Will not burn.

## REACTIVITY

4 Readily detonates or explodes.  
3 Can detonate or explode but requires strong initiating force or heating under confinement.  
2 Normally unstable but will not detonate.  
1 Normally stable. Unstable at high temperature and pressure. Reacts with water.  
0 Normally stable. Not reactive with water.

The University’s Environmental Health & Safety (EH&S) Department has developed this plan summary to identify methods of protecting individuals and the environment from the use and storage of hazardous substances (chemical, infectious or radioactive materials) in teaching, research and development laboratories at the University.

Identification of Chemicals and Hazards

- All Instructors and Instructors and/or Principle Investigators (PIs) shall comply with the University Hazard Communication Program (http://www.csupomona.edu/~ehs/ftp/HazardCommunicationManual/HazcomManual.doc), which is incorporated by reference. Specifically, the Instructor and/or PI shall
  - Ensure that all requirements of the Hazard Communication Program have been met before individuals are exposed to hazardous substances under normal conditions of use or in a foreseeable emergency.
  - When ordering any suspected hazardous substances through Procurement, Foundation Financial Services or other sources, Instructors and/or Principle Investigators will make a request to the vendor for an MSDS (Material Safety Data Sheet) if one is not currently present in the laboratory.
  - Develop and maintain an inventory of hazardous substances present in the laboratory and maintain a current file of MSDSs for each hazardous substance. Provide copies of the MSDSs and the inventory to the EH&S Department. Instructors and/or Principle Investigators will report any increases of hazardous substances, that are reportable under the Hazardous Materials Business Plan, to Environmental Health & Safety (EH&S) on a monthly basis. Instructors and/or Principle Investigators will conduct an annual hazardous substance inventory review and verify that they have an MSDS for each hazardous substance. Instructors and/or Principle Investigators will be required to obtain copies of any MSDS that they do not have on file from EH&S or the vendor.
  - Post in a conspicuous location for all workers the HAZARD COMMUNICATION NOTICE, available on the Environmental Health & Safety Web Site at http://www.csupomona.edu/~ehs/ftp/HazcomPoster.doc.
  - Develop methods to inform students and workers of the hazards of non-routine tasks.
  - Develop methods, as appropriate, to inform outside contractors’ employees and other individuals who may occasionally work in your laboratory of the hazardous substances to which they may be exposed. The posting of a completed Laboratory Warning Sign, available on the Environmental Health & Safety Web Site at http://www.csupomona.edu/~ehs/ftp/LabSign.doc, on or near the entry door to the laboratory will be considered as substantial compliance with this section, provided the principle investigator responds to any questions that may be asked and the sign includes appropriate information. The appropriate information is the completed NFPA diamond, information about the general hazards in the laboratory (Radiation, Infectious Agents, and/or Chemicals), personnel protective equipment required, Principle Investigator’s name and campus extension.
  - Ensure that all containers of hazardous substances in the workplace are labeled, tagged or marked with the Identity of the hazardous substance(s), appropriate hazard warnings, and name of the manufacturer, address and phone number. Labels on all containers of hazardous substances shall be maintained.
Methods of isolation, separation, containment, engineering controls and administrative controls

- The Instructor and/or PI will provide sufficient storage space to safely and securely store the hazardous substances.
- Only quantities of hazardous substances that can be used within a reasonable and legal period of time will be stored. The quantities of hazardous substances stored or used in a room should not exceed the limits contained in the Uniform Building and Fire Codes (see Table I).
- Potentially unstable chemicals having a specific shelf life will be removed for proper disposal prior to the expiration of the shelf life.
- Hazardous substance containers will be maintained in good condition (e.g., no rust or structural defects). If a container begins to leak, the contents will be transferred to another compatible container in good condition.
- Hazardous substance containers shall be closed except when adding or dispensing material. Additionally, containers shall be kept in approved storage cabinets with spill containment, unless being utilized.
- Incompatible hazardous substances shall be separated in storage to prevent mixing, in the event of an earthquake, leak, spill or other similar event.
- Containers of flammable and combustible substances will be stored in Fire Marshal approved flammable storage cabinets, except when in use.
- The use of volatile hazardous substances that present an exposure risk to individuals will be utilized in a chemical fume hood, biosafety cabinet or other appropriate control device. Chemical fume hoods and Biosafety cabinets are required to be tested annually.
- The Instructor and/or PI will comply with the more detailed procedures for the isolation, separation and containment of hazardous substances found in the following University Hazardous Substance Management Plans, which are incorporated in this plan by reference:
  - Chemical Safety Plan for Laboratories (http://www.csupomona.edu/~ehs/ftp/CSPL.doc)
- The Instructor and/or PI will conduct the periodic inspections in the above listed Hazardous Substance Management Plans, as applicable. Copies or summaries of these inspections will be submitted to the EH&S Department.

Hazardous Waste Management

- The Instructor and/or PI will comply with the procedures for the isolation, separation and containment of hazardous waste found in the following University Hazardous Substance Management Plans, as applicable:
Emergency Response Plans

- The Instructor and/or PI will develop standard operational procedures to maintain control of hazardous substances, including exposure, in compliance with established campus programs for the management of chemical, infectious or radioactive materials.
- The Instructor and/or PI will maintain spill response kits to deal with hazardous substance spills that may occur as a result of their work.
- All Laboratory personnel should be trained on and follow the emergency procedures, including the use of the available hazardous substance spill kits.
- In the event that a hazardous substance spill occurs that cannot be safely contained and cleaned up by laboratory personnel, the campus Emergency Management Plan will be activated by dialing Campus Police at 911 and contacting Environmental Health & Safety at Extension 4697.
- The campus emergency procedures for emergency contacts, medical assistance, gas leaks, explosions, evacuation, earthquake, fire response, hazardous materials spills, bomb threats and other emergencies are found in the Emergency Procedures Pamphlet (http://www.csupomona.edu/~ehs/ftp/Emerg_Proc_%20Man1.pdf). This pamphlet will be posted in all laboratories.
- The Instructor and/or PI will comply with the University's First-Aid Program (http://www.csupomona.edu/~ehs/Firstaid.pdf), which is incorporated in this plan by reference.
- Portable Fire Extinguishers shall be inspected monthly to make sure they are in the designated location, visible, accessible, instruction/nameplate is facing forward, safety seal/pin is intact and fully charged (Section 574.2 Title 19 CCR).
- Plumbed emergency eyewash/shower equipment shall be tested/activated at least monthly to flush the line and to verify proper operation. Inspection tags shall be maintained to document this testing (Section 5162 Title 8 CCR).

Training

- All laboratory personnel will receive initial training on:
  - Potential occupational hazards in general in the work area and associated with their job assignment.
  - Mandatory Safe Work Practices, which indicate the safe work conditions, safe work practices and personal protective equipment required for their work. Recommended safe work practices for the University are located on the Internet at http://www.csupomona.edu/~ehs/ftp/safeworkpractices.doc.
  - Hazards of any chemicals to which they may be exposed and their right to information contained on material safety data sheets for those chemicals, and how to understand this information.
  - Their right to ask any questions, or provide any information to the employer on safety either directly or anonymously without any fear of reprisal (See Safety Concern Reporting below).
  - Disciplinary procedures the employer will use to enforce compliance with Mandatory Safe Work Practices.
All laboratory personnel should be trained on and follow the emergency procedures, including the use of the available hazardous substance spill kits and portable fire extinguishers.

Instructors and/or PIs shall provide workers with information and training on hazardous substances in their work area at the time of their initial assignment, and whenever a new hazard is introduced into their work area.

Instructors and/or PIs will ensure that workers receive training as required in the University Hazardous Substances Management Plans, as applicable. These plans are the Injury and Illness Prevention, Bloodborne Pathogens, Hazard Communication, Infectious Materials, Medical Waste, Chemical Safety in Laboratories, Emergency Procedures, Hazardous Waste, Radiation Safety and Fire Safety.

Information on training, including a training schedule, is available on the EH&S Web Site at http://www.csupomona.edu/~ehs/training.html.

Safety Concern Reporting

The University has established procedures for reporting safety-related issues as part of the Injury and Illness Prevention Program. All safety concerns should be reported immediately to your supervisor/principal investigator, as well as the department responsible for abatement or control of the hazard.

**Serious Injuries or Crimes**

Dial 911 Police Services

**Hazardous Substance Releases**

Dial 911 Police Services

Dial 4697 Environmental Health and Safety

**Routine Repairs/Maintenance**

Dial 3030 Facilities Administration (M-F, 8 am—5 pm)

or

Dial 3070 Police Services (after hours)

**Pedestrian/Vehicle Safety**

Dial 3070 Police Services

**Other Safety Information**

Dial 4697 Environmental Health and Safety

**EH&S Confidential Voice Mailbox**

Dial 4313

In addition to the telephone numbers listed above, a confidential voice mailbox (extension 4313), web-based/on-line reporting (http://www.csupomona.edu/~ehs/safetyconcern.html) and an Employee Safety Information Form (F-2554-00) are available to assist staff in reporting potential safety hazards. Every effort has been made to maintain the confidentiality of those using the voicemail extension; David Patterson, Director of Environmental Health and Safety, is the only individual with access to the voicemail messages. Please do not use the voicemail number or the information form for reporting hazards that require immediate assistance. Emergency calls should be directed to 911, urgent calls should be directed to University Police Services (3070) or Facilities Management (3030).
Supervisors and departments receiving a report of an imminent safety hazard should respond immediately to prevent serious injuries. Most safety hazards can be avoided by the abatement or removal of the hazard, posting warning signs, closing the area to prevent entry, or through the proper use of person protective equipment.

**Injury & Illness Prevention Plan**

The Instructor and/or PI shall comply with the following University Programs:

- Department Safety Coordinator Program ([http://www.csupomona.edu/~ehs/ftp/deptsafetycoordinator.doc](http://www.csupomona.edu/~ehs/ftp/deptsafetycoordinator.doc)) for office or non-laboratory areas.
- Injury & Illness Prevention Plan ([http://www.csupomona.edu/~ehs/ftp/iipp.doc](http://www.csupomona.edu/~ehs/ftp/iipp.doc))

Table of Contents

1.0  Definition and characteristics
2.0  Potential hazards
3.0  Storage and handling
4.0  Personal protection equipment
5.0  Common examples
6.0  First Aid and Response

1.0  Definition and Characteristics

Explosives are any substances with a rapid release of gas or heat in response to a sudden shock, heat or pressure. Can also be chemicals which react with itself to produce explosions.

2.0  Potential Hazards

<table>
<thead>
<tr>
<th>Fire</th>
<th>Fire can be present after the explosion</th>
</tr>
</thead>
<tbody>
<tr>
<td>Explosion</td>
<td>The substance is easily ignited by any kind of ignition source</td>
</tr>
<tr>
<td>Health</td>
<td>The explosion can cause flying particles that are capable of causing damage</td>
</tr>
</tbody>
</table>
3.0  Storage and Handling

  o  The stored area of the substance must be free from all potential ignition sources.
  o  Store in tightly sealed containers to prevent peroxide crystal
  o  The equipment must be grounded and free from radio transmitters within 100 meters of electric detonators
  o  Should not be ground with materials that create friction or have abrasive properties (e.g. stone mortar and pestle)
  o  Do not work with magnetic stirrers
  o  Refer to MSDS for specific disposal time for specific chemicals
  o  Refer to MSDS for specific handling procedures

4.0  Personal Protection Equipment

  4.1.1  Wear appropriate goggles to prevent eye contact
  4.1.2  Lab coat (non synthetic fabric) or appropriate protective gear to prevent skin contact
  4.1.3  Shields (depending on explosive type)
  4.1.4  Wear protective gloves to prevent skin contact
  4.1.5  Refer to MSDS or chemical chart for equipment type on specific chemicals

5.0  Common Examples

  5.1.1  Dimethyl sulfoxide
  5.1.2  Ether
  5.1.3  Hydrogen peroxide
  5.1.4  Perchloric acid
  5.1.5  Picric acid

6.0  First Aid

<table>
<thead>
<tr>
<th>Eye</th>
<th>Wash immediately with large amounts of water and seek professional attention immediately</th>
</tr>
</thead>
<tbody>
<tr>
<td>Skin</td>
<td>Immediately wash affected area with soap and water and remove any contaminated clothing</td>
</tr>
<tr>
<td>Inhaled</td>
<td>Acquire fresh air immediately and perform artificial respiration if required</td>
</tr>
<tr>
<td>Swallowed</td>
<td>Seek medical attention immediately</td>
</tr>
</tbody>
</table>
1.0 Definition and characteristics

Gas in a container with either an absolute pressure exceeding 40 psi at 70°F (21.1 °C) or with an absolute pressure exceeding 104 psi at 130 °F (54.4 °C). Can also be in a liquid vapor form with a pressure exceeding 40 psi at 100°F (37.8°C). Flammable gasses will ignite in the presence of an ignition source.

2.0 Potential Hazards

<table>
<thead>
<tr>
<th>Fire</th>
<th>Most are extremely flammable</th>
</tr>
</thead>
<tbody>
<tr>
<td>Explosion</td>
<td>Can ignite if in contact with any ignition source</td>
</tr>
<tr>
<td>Health</td>
<td>Substance can be toxic or can reduce oxygen</td>
</tr>
</tbody>
</table>
3.0 Storage and Handling
- Kept away from any heat sources such as sunlight
- Storage of gas cylinders must be securely held (double strapped) in sturdy racks or stations to prevent falling or knocking over
- Separated from oxidizing gases
- Cylinder caps need to be tightly closed
- Open cylinders in fume hood or gas cabinet and avoid ignition sources
- Refer to MSDS for specific handling procedures

4.0 Personal Protection Equipment
- Wear goggles (if required) to prevent eye contact
- Recommended material: non-ventilated or gas proof
- Wear appropriate clothing/gear to prevent skin contact
- Wear appropriate gloves
- Recommended material: butyl
- Refer to MSDS or chemical chart for equipment type on specific chemicals

5.0 Common Examples
- Acetylene
- Ammonia
- Ethane
- Hydrogen
- Methane
- Propane
- Carbon Disulfide

6.0 First Aid

<table>

1.0 Definition and characteristics
2.0 Potential hazards
3.0 Storage and handling
4.0 Personal protection equipment
5.0 Common examples
6.0 First Aid
1.0 Definition and Characteristics

Gas in a container with either an absolute pressure exceeding 40 psi at 70°F (21.1 °C) or with an absolute pressure exceeding 104 psi at 130 °F (54.4 °C). Can also be in a liquid vapor form with a pressure exceeding 40 psi at 100°F (37.8°C). Toxic gases can cause many health hazards due to their poisonous components.

2.0 Potential Hazards

<table>
<thead>
<tr>
<th>Fire</th>
<th>Some can be potentially flammable</th>
</tr>
</thead>
<tbody>
<tr>
<td>Explosion</td>
<td>Can ignite if in contact with ignition source</td>
</tr>
<tr>
<td>Health</td>
<td>Can be fatal if inhaled or absorbed through the skin. Irritation may also result from the gas odors.</td>
</tr>
</tbody>
</table>

3.0 Storage and Handling

- Kept away from any heat sources such as sunlight
- Storage of gas cylinders must be securely held (double strapped) in sturdy racks or stations to prevent falling or knocking over
- Cylinder caps need to be tightly closed
- Place in well ventilated cylinder storage area
- Refer to MSDS for specific handling procedures

4.0 Personal Protection Equipment

- Wear goggles (if required) to prevent eye contact
- Recommended material: non-ventilated or gas proof
- Wear appropriate clothing/gear to prevent skin contact
- Wear appropriate gloves to prevent skin contact
- Refer to MSDS or chemical chart for equipment type on specific chemicals

5.0 Common Examples

- Chlorine
- Fluorine
- Hydrogen selenide
- Nitric oxide

6.0 First Aid

<table>

Inhaled

Acquire fresh air immediately and perform artificial respiration if required. Seek medical attention.
6.0 First Aid

1.0 Definition and Characteristics

Gas in a container with either an absolute pressure exceeding 40 psi at 70°F (21.1 °C) or with an absolute pressure exceeding 104 psi at 130 °F (54.4 °C). Can also be in a liquid vapor form with a pressure exceeding 40 psi at 100°F (37.8°C). This gas type can cause severe damage or alternations to the skin.

2.0 Potential Hazards

Health: If inhaled or contact, can reduce oxygen intake or irreversibly alter skin

3.0 Storage and Handling

- Kept away from any heat sources such as sunlight
- Storage of gas cylinders must be securely held (double strapped) in sturdy racks or stations to prevent falling or knocking over
- Cylinder caps need to be tightly closed
- Place in well ventilated cylinder storage area
- Refer to MSDS for specific handling procedures

4.0 Personal Protection Equipment

- Wear goggles (if required) to prevent eye contact
- Recommended material: non-ventilated or gas proof
- Wear appropriate clothing/gear to prevent skin contact
- Refer to MSDS or chemical chart for equipment type on specific chemicals

5.0 Common Examples

- Acetylene
- Methyl acetylene
- Vinyl chloride
- Vinyl fluoride

6.0 First Aid
| **Eye** | Wash immediately with large amounts of water for 15 mins and seek professional attention immediately |
| **Skin** | Immediately wash affected area with large amounts of water for at least 15 mins and remove any contaminated clothing |
| **Inhaled** | Acquire fresh air immediately and perform artificial respiration if required. Seek medical attention. |

1.0 Definition and Characteristics

Any solid capable of causing fire or ignition leading to serious hazards. Material is considered flammable if tested under 16 CFR 1500.44, if the material ignites and burns with a self-sustained flame at a rate greater than 1/10th in/sec along its major axis. Flammable solids include pyrophorics, dry explosives and combustible materials.

2.0 Potential Hazards

<table>
<thead>
<tr>
<th>Fire</th>
<th>Material is flammable and can cause fires</th>
</tr>
</thead>
<tbody>
<tr>
<td>Explosion</td>
<td>The substance is easily ignited (especially when dried) by ignition sources</td>
</tr>
<tr>
<td>Health</td>
<td>Can cause burns and toxicity if inhaled or absorbed through skin. Corrosive gases may also be produced from the burning.</td>
</tr>
</tbody>
</table>

3.0 Storage and Handling

- The stored area of the substance must be free from all potential ignition sources.
- Can react with moisture in the air and should be used in anoxic conditions if necessary.
- Store in dry, cool and appropriate temperatures
- Refer to MSDS for specific handling procedures

4.0 Personal Protection Equipment

- Wear appropriate goggles to prevent eye contact
- Lab coat (cotton material for pyrophorics) or appropriate protective gear
- Wear appropriate gloves to prevent skin contact
- Refer to MSDS or chemical chart for equipment type on specific chemicals

5.0 Common Examples

- Aluminum metals
- Barium metals

</tr>
</tbody>
</table>
13.0 Storage and Handling
   o The stored area of the substance must be free from all potential ignition sources.
   o Can react with moisture in the air and should be stored under an inert gas (i.e. argon) environment
   o Store in dry, cool and appropriate temperatures
   o Obtain approval prior to use
   o Work under fume hood to avoid breathing in hazardous vapors
   o Understand syringe transfer procedures prior to handling
   o Refer to MSDS for specific handling procedures

14.0 Personal Protection Equipment
   o Wear chemical splash goggles or face shield to prevent eye and face contact
   o Lab coat (fire resistant cotton or Nomex) or appropriate protective gear
   o Wear appropriate gloves to prevent skin contact
   o Refer to MSDS or chemical chart for equipment type on specific chemicals

15.0 Common Examples
   o Metalorganics
   o Triethylborane

</thead>
<tbody>
<tr>
<td>Explosion</td>
<td>Explosions can result due to pressure or chemical reaction</td>
</tr>
<tr>
<td>Health</td>
<td>Can cause burns in the skin upon contact and can also be toxic</td>
</tr>
</tbody>
</table>
3.0 Storage and Handling
   o Avoid exposure of material to skin
   o Keep in well ventilated areas
   o Handle and store in a appropriate containers to ensure they do not break as a result of pressure
   o Transfers done slowly in ventilated areas
   o Include several pressure relief devices or methods to prevent explosions from rapid vaporization
   o Fill cylinders to a maximum of 80% to prevent pressure from expansion of the cryogen
   o Cryogenic materials should have regularly maintenance
   o Refer to MSDS for specific chemical storage conditions
   o Refer to MSDS for specific handling procedures

4.0 Personal Protection Equipment
   o Wear appropriate face shields or goggles
   o Wear a loose fitting lab coat or appropriate protective gear to prevent skin contact
   o Wear loose fitting safety gloves
   o Recommended material: Cryogenic resistant leather
   o Refer to MSDS or chemical chart for equipment type for specific cryogenics

5.0 Common Examples
   o LN₂
   o LH₂

DATE: February 13, 2002
TO: Distribution COPY: Mr. Ray Inge
FROM: David L. Patterson File: M02:027
   Director, Environmental Health & Safety
SUBJECT: Emergency Eyewash and Shower Equipment

Richard West, Executive Vice Chancellor and Chief Financial Officer, originally issued this memorandum to reiterate the CSU policy of full compliance with the applicable regulations/requirements for emergency eyewash and shower equipment as contained in California Code of Regulations, Title 8, §5162. Some minor editorial modifications have been made by Environmental Health & Safety. Please share this information with the employees in your department who handle hazardous substances on a regular basis.

Federal and state laws and regulations require employers to provide employees (faculty and staff) with emergency eyewash and shower equipment at all work areas where, during routine operations or foreseeable emergencies, the eyes of an employee may come into contact with a substance which can cause corrosion, severe irritation or permanent tissue damage or which is toxic by absorption (California Code of Regulations, Title 8, §5162).

Water hoses, sink faucets or showers are not acceptable eyewash facilities. Personal eyewash units or drench hoses which meet the requirement of ANSI Z358.1-1981, §6 or 8, may support plumbed or self-contained units but shall not be used in lieu of them.

An emergency shower which meets the requirements of ANSI Z358.1-1981, §4 or 9, shall be provided at all work areas where, during routine operations or foreseeable emergencies, areas of the body may come into contact with a substance which is corrosive or severely irritating to the skin or which is toxic by skin absorption.

Emergency eyewash facilities and deluge showers shall be in accessible locations that require no more than 10 seconds for the injured person to reach. Plumbed and self-contained eyewash and shower equipment shall supply potable water at the flow rates and time durations specified in ANSI Z358.1-1981. Plumbed eyewash and shower equipment shall be activated at least monthly to flush the line and to verify proper operation. This test shall be documented.

All requirements and regulations for emergency eyewash and shower equipment as defined in the California Code of Regulations, Title 8, §5162 and ANSI Z358.1-1981 shall be followed. Non-compliance with this regulation is not a risk to be assumed by any campus or department.

If you have any questions, feel free to call me at extension 3695.
Emergency Eyewash and Shower Equipment

Hazardous Substances – Minimization, Storage and Labeling

Richard West, Executive Vice Chancellor and Chief Financial Officer, originally issued this memorandum. The purpose was to emphasize the need for minimization of hazardous waste that is generated and the importance of compliance with hazardous substances labeling and storage regulations. Some minor editorial modifications have been made by Environmental Health & Safety. Please share this information with the employees in your department who handle hazardous substances on a regular basis.

Economics, liability and environmental concerns are three incentives to encourage each department to consider waste minimization. By minimizing our hazardous waste production we compensate for increasing disposal costs, increasing land disposal restrictions and bans, savings in raw materials and reduce potential liability for environmental problems onsite and offsite as well as reduction in potential liability for employee and student safety.

The most desirable methods of waste minimization are source reduction. While it may appear to acquire the best price by ordering in volume, often the cost for disposal exceeds the original savings. Waste minimization can further be realized through efficient material management, when possible substitution of less hazardous materials, good laboratory procedures and the migration to micro techniques (i.e. microchemistry) when performing research or classroom laboratory experiments.

Specific requirements applicable to the storage of hazardous substances are (California Code of Regulations, Title 8, §5164):

a) Substances which, when mixed, react violently, or evolve toxic vapors or gases, or which in combination become hazardous by reason of toxicity, oxidizing power, flammability, explosibility, or other properties, shall be separated from each other in storage by distance, by partitions, or otherwise, so as to preclude accidental contact between them.

b) Hazardous substances shall be stored in containers which are chemically inert to and appropriate for the type and quantity of the hazardous substance.

c) Containers of hazardous substances shall not be stored in such locations or manner as to result in damage to the container. Containers shall not be stored where they are exposed to heat sufficient to rupture the containers or to cause leakage.

d) Containers used to package a substance which gives off toxic asphyxiation, suffocation, or anesthetic fumes in hazardous amounts shall not be stored in locations where it could be reasonably anticipated that employees would be exposed. This requirement shall not apply to small quantities of such materials kept in closed containers, or to tank cars or trucks.
Along with utilizing the correct storage containers for hazardous substances, each department shall ensure that each container of hazardous substances in the workplace is labeled, tagged or marked with the following information.

a) Identification of the hazardous substance(s) contained therein
b) Appropriate hazards warnings; and
c) Name and address of manufacturer, importer or other responsible party.

Labeling of portable containers into which hazardous substances are transferred from labeled containers, and which are intended only for the immediate use of the employee who performs the transfer is not required. However, Environmental Health & Safety recommends that you label all containers.

Each department shall insure that employees do not remove or deface existing labels on incoming containers of hazardous substances unless the container is immediately marked with the required information.

Each department shall ensure that labels or other forms of warnings are legible, in English, and prominently displayed on the container or readily available in the work area throughout each work shift.

All requirements and regulations for the storage and labeling of hazardous substances as defined in the California Code of Regulations, Title 8, §5164, §5194(f) shall be followed.

Additionally, resources are available on the Environmental Health & Safety Web Page at http://www.csupomona.edu/~ehs/. Some specific documents are as follows:
