Document Camera in Zoom

Document Cameras are capable of USB output allowing for use with zoom on classroom PCs in HyFlex classrooms.
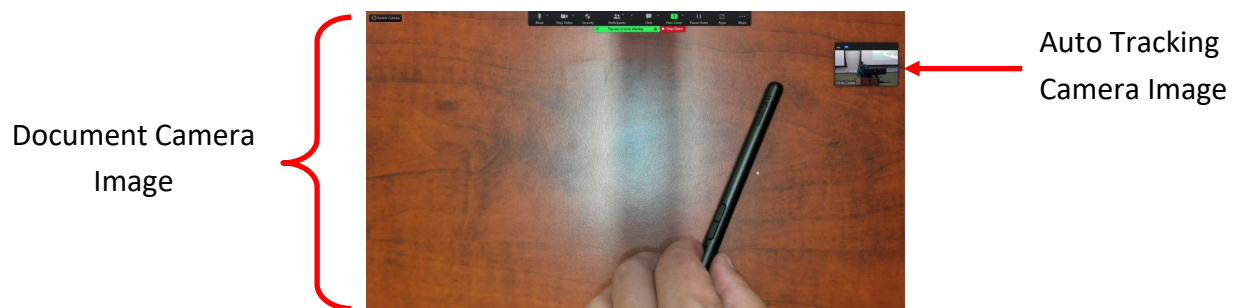

Once you've started a zoom call on a HyFlex system, make sure the document camera* is powered on, then click zoom's Share Screen Button:

The Screen Share selection window will appear. Click the "Advanced" tab at the top.
Select "Content from 2nd Camera" and Click share.

The Document Camera's feed will now be the main feed shared with zoom participants, and the feed from the HyFlex auto-tracking camera will be present as a small draggable window visible to you and your zoom participants.

FLEX 11

Hovercam's Flex 11 software can also be used to share the document camera in zoom. For additional information follow this link:
