Colloquium Series

Undergraduate Research Projects in Finite Group Theory

Dandrielle Lewis

High Point University

Abstract: Let G and H be groups, and consider the direct product, $G \times H$. In my research, I study classifications of subgroups in $G \times H$. My studies have led to some exciting undergraduate research projects involving subgroup classifications in products of groups. In this talk, I will introduce groups and share with you a few projects that I have worked on with undergraduates.
